

Designation: D4000-10a Designation: D4000 - 11

Standard Classification System for Specifying Plastic Materials¹

This standard is issued under the fixed designation D4000; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

1. Scope*

- 1.1 This standard provides a classification system for tabulating the properties of unfilled, filled, and reinforced plastic materials suitable for processing into parts.
- Note 1—The classification system may serve serves many of the needs of industries using plastic materials. The standard is subject to revision as the need requires; therefore, the latest revision should always be used.
- 1.2 The classification system and subsequent line call_out (specification) is intended to be a means of identifying plastic materials used in the fabrication of end items or parts. It is not intended for the selection of materials. Material selection should be made by those having expertise in the plastics field after careful consideration of the design and the performance required of the part, the environment to which it will be exposed, the fabrication process to be employed, the inherent properties of the material not covered in this document, and the economic factors.
- 1.3 This classification system is based on the premise that plastic materials can be arranged into broad generic families using basic properties to arrange the materials into groups, classes, and grades. A system is thus established which, together with values describing additional requirements, permits as complete a description as desired of the selected material.
- 1.4 In all cases where the provisions of this classification system would conflict with the referenced ASTM specification for a particular material, the latter shall take precedence.
 - Note 2—When using this classification system the two-letter, three-digit suffix system applies.
- Note 3—When a material is used to fabricate a part where the requirements are too specific for a broad material call_out, it is advisable for the user to consult the supplier to secure <u>a</u> call_out of the properties to suit the actual conditions to which the part is to be subjected.
- 1.5 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

2. Referenced Documents

- D1430 Classification System for Polychlorotrifluoroethylene (PCTFE) Plastics
- D1434 Test Method for Determining Gas Permeability Characteristics of Plastic Film and Sheeting
- D1435 Practice for Outdoor Weathering of Plastics
- D1499 Practice for Filtered Open-Flame Carbon-Arc Exposures of Plastics
- D1505 Test Method for Density of Plastics by the Density-Gradient Technique
- D1525 Test Method for Vicat Softening Temperature of Plastics
- D1562 Classification System and Basis for Specification for Cellulose Acetate Propionate Molding and Extrusion Compounds
- D1600 Terminology for Abbreviated Terms Relating to Plastics
- D1693 Test Method for Environmental Stress-Cracking of Ethylene Plastics
- D1784 Specification for Rigid Poly(Vinyl Chloride) (PVC) Compounds and Chlorinated Poly(Vinyl Chloride) (CPVC) Compounds
- D1822 Test Method for Tensile-Impact Energy to Break Plastics and Electrical Insulating Materials
- D1929 Test Method for Determining Ignition Temperature of Plastics
- D2116 Specification for FEP-Fluorocarbon Molding and Extrusion Materials
- D2137 Test Methods for Rubber PropertyBrittleness Point of Flexible Polymers and Coated Fabrics
- D2240 Test Method for Rubber PropertyDurometer Hardness
- D2287 Specification for Nonrigid Vinyl Chloride Polymer and Copolymer Molding and Extrusion Compounds
- D2288 Test Method for Weight Loss of Plasticizers on Heating
- D2565 Practice for Xenon-Arc Exposure of Plastics Intended for Outdoor Applications
- D2583 Test Method for Indentation Hardness of Rigid Plastics by Means of a Barcol Impressor
- D2584 Test Method for Ignition Loss of Cured Reinforced Resins
- D2632 Test Method for Rubber PropertyResilience by Vertical Rebound
- D2843 Test Method for Density of Smoke from the Burning or Decomposition of Plastics
- D2863 Test Method for Measuring the Minimum Oxygen Concentration to Support Candle-Like Combustion of Plastics (Oxygen Index)
- D2951 Test Method for Resistance of Types III and IV Polyethylene Plastics to Thermal Stress-Cracking
- D3012 Test Method for Thermal-Oxidative Stability of Polypropylene Using a Specimen Rotator Within an Oven
- D3159 Specification for Modified ETFE-Fluoropolymer Molding and Extrusion Materials
- D3222 Specification for Unmodified Poly(Vinylidene Fluoride) (PVDF) Molding Extrusion and Coating Materials
- D3275 Classification System for E-CTFE-Fluoroplastic Molding, Extrusion, and Coating Materials
- D3294 Specification for Polytetrafluoroethylene (PTFE) Resin Molded Sheet and Molded Basic Shapes
- D3295 Specification for PTFE Tubing, Miniature Beading and Spiral Cut Tubing

- D3296 Specification for FEP-Fluorocarbon Tube
- D3307 Specification for Perfluoroalkoxy (PFA)-Fluorocarbon Resin Molding and Extrusion Materials
- D3350 Specification for Polyethylene Plastics Pipe and Fittings Materials
- D3418 Test Method for Transition Temperatures and Enthalpies of Fusion and Crystallization of Polymers by Differential Scanning Calorimetry
- D3595 Specification for Polychlorotrifluoroethylene (PCTFE) Extruded Plastic Sheet and Film
- D3638 Test Method for Comparative Tracking Index of Electrical Insulating Materials
- D3713 Test Method for Measuring Response of Solid Plastics to Ignition by a Small Flame
- D3763 Test Method for High Speed Puncture Properties of Plastics Using Load and Displacement Sensors
- D3801 Test Method for Measuring the Comparative Burning Characteristics of Solid Plastics in a Vertical Position
- D3892 Practice for Packaging/Packing of Plastics
- D3895 Test Method for Oxidative-Induction Time of Polyolefins by Differential Scanning Calorimetry
- D3915 Specification for Rigid Poly(Vinyl Chloride) (PVC) and Chlorinated Poly(Vinyl Chloride) (CPVC) Compounds for Plastic Pipe and Fittings Used in Pressure Applications
- D3935 Specification for Polycarbonate (PC) Unfilled and Reinforced Material
- D3965 Specification for Rigid Acrylonitrile-Butadiene-Styrene (ABS) Materials for Pipe and Fittings
- D3985 Test Method for Oxygen Gas Transmission Rate Through Plastic Film and Sheeting Using a Coulometric Sensor
- D4020 Specification for Ultra-High-Molecular-Weight Polyethylene Molding and Extrusion Materials
- D4066 Classification System for Nylon Injection and Extrusion Materials (PA)
- D4067 Classification System for and Basis for Specification for Reinforced and Filled Poly(Phenylene Sulfide) (PPS) Injection Molding and Extrusion Materials Using ASTM Methods
- D4101 Specification for Polypropylene Injection and Extrusion Materials
- D4181 Classification for Acetal (POM) Molding and Extrusion Materials
- D4203 Specification for Styrene-Acrylonitrile (SAN) Injection and Extrusion Materials
- D4216 Specification for Rigid Poly(Vinyl Chloride) (PVC) and Related PVC and Chlorinated Poly(Vinyl Chloride) (CPVC) Building Products Compounds
- D4329 Practice for Fluorescent UV Exposure of Plastics
- D4349 Classification System and Basis for Specification for Polyphenylene Ether (PPE) Materials
- D4364 Practice for Performing Outdoor Accelerated Weathering Tests of Plastics Using Concentrated Sunlight
- D4396 Specification for Rigid Poly(Vinyl Chloride) (PVC) and Chlorinated Poly(Vinyl Chloride) (CPVC) Compounds for Plastic Pipe and Fittings Used in Nonpressure Applications
- D4441 Specification for Aqueous Dispersions of Polytetrafluoroethylene
- D4474 Classification System for Styrenic Thermoplastic Elastomer Injection Molding and Extrusion Materials (TES)
- D4507 Specification for Thermoplastic Polyester (TPES) Materials⁰
- D4549 Specification for Polystyrene and Rubber-Modified Polystyrene Molding and Extrusion Materials (PS)
- D4617 Classification System for Phenolic Compounds (PF)
- D4634 Specification for Styrene-Maleic Anhydride Materials (S/MA)
- D4673 Classification System for AcrylonitrileButadieneStyrene (ABS) Plastics and Alloys Molding and Extrusion Materials
- D4745 Specification for Filled Compounds of Polytetrafluoroethylene (PTFE) Molding and Extrusion Materials
- D4804 Test Method for Determining the Flammability Characteristics of Nonrigid Solid Plastics
- D4812 Test Method for Unnotched Cantilever Beam Impact Resistance of Plastics
- D4894 Specification for Polytetrafluoroethylene (PTFE) Granular Molding and Ram Extrusion Materials
- D4895 Specification for Polytetrafluoroethylene (PTFE) Resin Produced From Dispersion
- D4976 Specification for Polyethylene Plastics Molding and Extrusion Materials
- D4986 Test Method for Horizontal Burning Characteristics of Cellular Polymeric Materials
- D5021 Specification for Thermoplastic ElastomerChlorinated Ethylene Alloy (TECEA)
- D5046 Classification for Fully Crosslinked Elastomeric Alloys (FCEAs)
- D5048 Test Method for Measuring the Comparative Burning Characteristics and Resistance to Burn-Through of Solid Plastics Using a 125-mm Flame
- D5132 Test Method for Horizontal Burning Rate of Polymeric Materials Used in Occupant Compartments of Motor Vehicles
- D5138 Classification System for Liquid Crystal Polymers (LCP)
- D5203 Specification for Polyethylene Plastics Molding and Extrusion Materials from Recycled Post-Consumer (HDPE) Sources
- D5204 Classification System for Polyamide-Imide (PAI) Molding and Extrusion Materials
- D5205 Classification System and Basis for Specification for Polyetherimide (PEI) Materials
- D5260 Classification for Chemical Resistance of Poly(Vinyl Chloride) (PVC) Homopolymer and Copolymer Compounds and Chlorinated Poly(Vinyl Chloride) (CPVC) Compounds
- D5279 Test Method for Plastics: Dynamic Mechanical Properties: In Torsion

D5336 Specification for Polyphthalamide (PPA) Injection Molding Materials

D5420 Test Method for Impact Resistance of Flat, Rigid Plastic Specimen by Means of a Striker Impacted by a Falling Weight (Gardner Impact)

D5436 Specification for Cast Poly(Methyl Methacrylate) Plastic Rods, Tubes, and Shapes

D5476 Classification System for Thermoplastic Polyurethane Materials (TPU)

D5575 Classification System for Copolymers of Vinylidene Fluoride (VDF) with Other Fluorinated Monomers

D5593 Classification for Thermoplastic ElastomersOlefinic (TEO)

D5628 Test Method for Impact Resistance of Flat, Rigid Plastic Specimens by Means of a Falling Dart (Tup or Falling Mass)

D5630 Test Method for Ash Content in Plastics

D5676 Specification for Recycled Polystyrene Molding and Extrusion Materials

D5857 Specification for Polypropylene Injection and Extrusion Materials Using ISO Protocol and Methodology

D5927 Classification System for Thermoplastic Polyester (TPES) Injection and Extrusion Materials Based on ISO Test Methods

D5990 Classification System for Polyketone Injection Molding and Extrusion Materials (PK)

D6314 Specification for Fluorocarbon Perfluoromethoxy (MFA) Resin Molding and Extrusion Materials

D6338 Classification System for Highly Crosslinked Thermoplastic Vulcanizates (HCTPVs) Based on ASTM Standard Test Methods

D6339 Classification System for and Basis for Specifications for Syndiotactic Polystyrene Molding and Extrusion (SPS)

D6358 Classification System for Poly (Phenylene Sulfide) Injection Molding and Extrusion Materials Using ISO Methods

D6360 Practice for Enclosed Carbon-Arc Exposures of Plastics

D6394 Specification for Sulfone Plastics (SP)

D6457 Specification for Extruded and Compression Molded Rod and Heavy-Walled Tubing Made from Polytetrafluoroethylene (PTFE)

D6585 Specification for Unsintered Polytetrafluoroethylene (PTFE) Extruded Film or Tape

D6778 Classification for Polyoxymethylene (POM, Acetal) Molding and Extrusion Materials

D6779 Classification System for Polyamide Molding and Extrusion Materials (PA)

D6835 Classification System for Thermoplastic Elastomer-Ether-Ester Molding and Extrusion Materials (TEEE)

D6865 Classification System for AcrylonitrileStyreneAcrylate (ASA) and AcrylonitrileEPDMStyrene (AES) Plastics and Alloys Molding and Extrusion Materials

M	Mineral	±2 percentage points	
N	Natural organic (cotton, sisal, hemp, flax, and so forth)	±2 percentage points	
Р	Mica	±2 percentage points	
Q	Silica	±2 percentage points	
R	Combinations of reinforcements or fillers, or both	nations of reinforcements or fillers, or both ±3 percentage points	
S	Synthetic organic ±2 percentage points		
Т	Talcum	Talcum ±2 percentage points	
V	Metal	±2 percentage points	
W	Wood	±2 percentage points	
X	Not specified	To be specified	

Ash content of filled or reinforced materials, or both may be determined using either Test Method D5630 or ISO 3451-1 where applicable.

3. Terminology

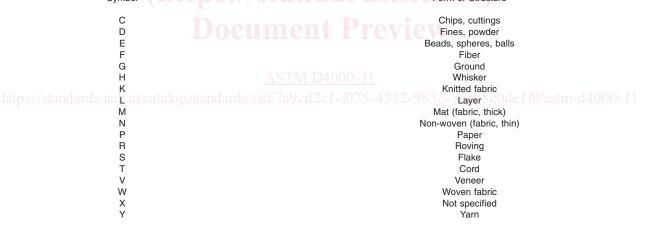

3.1 Definitions—The definitions used in this classification system are in accordance with Terminology D883.

4. Significance and Use

4.1 The purpose of this classification system is to provide a method of adequately identifying plastic materials in order to give industry a system that can be used universally for plastic materials. It further provides a means for specifying these materials by the use of a simple line call-out designation.

TABLE 2A Symbols for the Form or Structure of Fillers and Reinforcing Materials

Form or Structure

4.2 This classification system was developed to permit the addition of property values for future plastics.

5. Classification

- 5.1 Plastic materials shall be classified on the basis of their broad generic family. The generic family is identified by letter designations as found in Table 1. These letters represent the standard abbreviations for plastics in accordance with Terminology D1600.
- Note 4—For example: PA = polyamide (nylon), EMA = ethylene-methacrylic acid, and EVA = ethylene-vinyl acetate.
 - 5.1.1 The generic family is based on the broad chemical makeup of the base polymer. By its designation, certain inherent properties are specified.

TABLE 3 Suffix Symbols and Requirements^A

Symbol	Characteristic	
Α	Color (unless otherwise shown by suffix, color is understood to be natural)	

^BAdditional symbols may be added to this table as required.

TABLE 3 Continued

Symbol		Characteristic
Symbol	Second letter A = does not have to match a	Characteristica standard
	B = must match standard	a sianuaru
	Three-digit number 001 = color and standard	d number on drawing
D	002 = color on drawing	
	Fluid resistance, mildew resistance Fluid resistance	
= =	Second letter A = reference fuel A, ASTM D	∆471. aged 70 h at 23 ± 2°C
	B = reference fuel C, ASTM D	D471, aged 70 h at 23 \pm 2°C
	C = ASTM #1 oil, ASTM D471	
	D = IRM 902 oil, ASTM D471, E = IRM 903 oil, ASTM D471,	, 0
	F = Distilled water, ASTM D471,	
	Three digit number is obtained from Suffix Ta	Table 1. It indicates change in hardness, tensile strength, elongation, and volume.
		fter aging in ASTM #1 oil for 70 h at 100°C, can have changed no more than 2 Shore D points, G = A
	5 % tensile strength, 15 % elongation, and 5 Three-digit number 001 = No	
С	Melting point—softening point	apparent rungus attach
	Second letter B = ASTM D1525, load 10 N,	
	C = ASTM D1525, load 10 N,	
	D = ASTM D3418 (Transition t G = ISO 306, load 10 N, heati	n temperature DSC/DTA) (ISO 11357-1 and ISO 11357-3) ating rate 50°C/h (Vicat)
	H = ISO 306, load 10 N, heati	
	I = ISO 306, load 50 N, heatin	ing rate 50°C/h (Vicat)
	J = ISO 306, load 50 N, heatin	
	K = ASTM D1525, load 50 N, L = ASTM D1525, load 50 N,	
	Three-digit number = minimum value °C	nate D (vicat)
E	Electrical	·• · · · · · · ·
	Second letter A = dielectric strength (short-ti Three-digit number \times factor of 0.1 = kV/mm,	
		n, min by step), ASTM D149 (IEC 600243)
	Three-digit number \times factor of 0.1 = kV/mm,	n, min
	C = insulation resistance, AST	
	Three-digit number \times factor of $10^{14} = \Omega$, min D = dielectric constant at 1 MH	in MHz, ASTM D150, max (IEC 600250)
	Three-digit number × factor of 0.1 = value	112, ASTINI D 150, Illax (120 000250)
	E = dissipation factor at 1 MH:	Hz, ASTM D150, max (IEC 600250)
	Three-digit number × factor of 0.0001 = value	
	F = arc resistance, ASTM D49 Three-digit number = value	95, min
	G = volume resistivity, ASTM [
	Three-digit number \times factor of $10^{14} = \Omega$ -cm,	n, Min IIVI D4000-II
https://standa	H = comparative tracking inde Three-digit number = V, min	lex, ASTM D3638, ac frequency, 50 Hz, 0.1 % ammonium chloride (IEC 600112)
	J = volume resistivity, ASTM D	D257 (IFC 600093) Ω-cm
	K = surface resistivity, ASTM [D257 (IEC 600093), Ω (per square)
	First digit indicates:	
	1 = minimum requirement 2 = maximum requirement	
	Final two digits indicate the exponential value	ue of the base 10
	Example: EJ206 specifies a maximum volum	
	Flammability Second letter A = Horizontal Burning Bate	ASTM D635, UL94 HB, IEC 60695-11-10, Method A
	•	
•	Report as:	(First three digits equal burn rate in mm/min), next three significant digits are thickness of sample
		tested in mm × factor of 0.1. If sample burns beyond the 100 mm mark, the samples are
	B = Oxygen Index	considered to have no rating. ASTM D2863, ISO 4589
		Value % O ₂ to three significant figures
	C = Flash Ignition	ASTM D1929, Procedure A
		Value, °C min to three significant digits rounded to nearest whole number.
	•	ASTM D1929, Procedure B Value, °C min to three significant digits rounded to nearest whole number.
	E = Ignition by a Small Flame	
		Letter retired, standard withdrawn without replacement in 2000.
	•	ASTM D3801, UL94 V, IEC 60695-11-10, Method B
		(First digit = rating), next three significant digits are thickness of sample tested in mm \times factor of 0.1.
		0 - V-0
	9 9	1 = V-1
		2 = V-2 if no rating do not use "F"
	000 = to be specified by user	if no rating, do not use "F" r
		ASTM E162

Symbol Characteristic Flame Spread Report as: First two digits indicate minimum specimen thickness 00 to be specified 3.00 mm 05 01 0.25 mm 06 6.00 mm 9.00 mm 02 0.40 mm 07 03 0.80 mm 08 12.70 mm 04 1.60 mm >12.70 mm 09 Third digit indicates the flame spread 5 100 max 15 max 2 25 max 6 150 max 3 50 max 200 max 7 75 max 8 >200 H = Flame Spread Index ASTM F84 Report as: Flame Spread Index NOTE 1: Smoke Developed Index may also be reported. NOTE 2: Classifications may be used as per the International Building Code Flame Spread 0-25 Class I: Class II: Flame Spread 26-77 Class III: Flame Spread 76-200 J = Automotive Horizontal ASTM D5132, FMVSS 302, ISO 3795 Burn Rate Report as: (First three digits = burn rate in mm/min), next three significant digits are thickness of sample tested in mm \times factor of 0.1. **ASTM D2843** Letter retired, method no longer in broad commercial use, replaced by ASTM E662. UL (IEC 60695-11-10) Letter retired, see Appendix X1 for replacement procedures and references to the old requirements. M = Vertical Burn Rating; FilmASTM D4804, UL94 VTM, ISO 9773 (First digit = rating), next three significant digits are thickness of sample tested in mm × factor of Report as: 0.01 Rating designations: 0 = VTM01 = VTM12 = VTM2if no rating, do not use "M" N = Horizontal Burn Rate; ASTM D4986, UL94, ISO 9772 Foam (First digit = rating), next three significant digits are thickness of sample tested in mm × factor of Report as: 0.1. 0 = HBF Rating designations: 1 = HF-12 = HF-2if no rating, do not use "N" P = Glow Wire Flammability IEC 60695-2-12 Index (First three digits are glow wire flammability index reported in °C). Following three significant Report as: digits are thickness of sample tested in mm imes factor of 0.1. R = Heat Release Rate **ASTM E1354** Peak Heat Release Rate Report as: Rating Designations: (First three digits are peak heat release rate in kW/m²), next three digits are incident heat flux in kW times ten (\times 10). S = NBS Smoke (Flame or ASTM E662, ISO 5659-2 Smolder Mode) Report as: (First digit = 1 for Flame mode or 2 for Smolder mode), final three digits = Specific Optical Density. T = Fire Rating ASTM E119 (Fire resistance rating in hours, first two digits). Third digit = "1" for hose stream applied, "0" for Report as: no hose stream applied. Fourth digit is application from table below: Rating designations: 0: No application designated 1: Bearing Walls and Partitions 2: Nonbearing Walls and Partitions 3: Columns 4: Floors and Roofs 6: Loaded Restrained Beams 7: Protective Membranes in Wall, Partition, Floor, or Roof Assemblies U = Large Flame Vertical ASTM D5048, UL94 5VA, IEC 60695-11-20 Burn Rating; Plaque Report as: (First three digits = burn time plus afterglow time in seconds after fifth flame application), the fourth digit "1" or "0" for flaming drips (1 = yes, 0 = no), next three significant digits are thickness of sample tested in mm × factor of 0.1. Last digit: "1" or "0" for holes burned through plaques (1 = yes, 0 = no). V = Large Flame Vertical ASTM D5048, UL94 5VA, IEC 60695-11-20 Burn Rating; Bar (First three digits = burn time plus afterglow time in seconds after fifth flame application), fourth Report as: digit "1" or "0" for flaming drips, last three significant digits are thickness of sample tested in mm

 \times factor of 0.1.
