Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 121, *Anaesthetic and respiratory equipment*, Subcommittee SC 1, *Breathing attachments and anaesthetic machines*.

A list of all parts in the ISO 5356 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Anaesthetic and respiratory equipment — Conical connectors —

Part 2: Screw-threaded weight-bearing connectors

AMENDMENT 1

Introduction

First paragraph, first sentence

Replace the sentence with the following:

Whereas the cones and sockets specified in ISO 5356-1 are satisfactory for lightweight breathing attachments, there is also a need for more substantial connectors to support heavy or fragile components.

iTeh STANDARD PREVIEW
(standards.iteh.ai)

First paragraph, last sentence

Replace the sentence with the following: <https://standards.iteh.ai/catalog/standards/sist/44897b41-102c-4c5d-8033-d2ccc216c0d1/iso-5356-2-2012-amd-1-2019>

They should also be compatible with cones and sockets meeting the requirements specified in ISO 5356-1 and should, if possible, eliminate the likelihood of inadvertent misconnection, although it has to remain the responsibility of the user to check that any system in which they are used is correctly assembled before use.

Normative references

Replace the reference to ISO 5356-1:— (including the footnote) with the following:

ISO 5356-1:2015, *Anaesthetic and respiratory equipment — Conical connectors — Part 1: Cones and sockets*

Clause 4

Add the following sentence at the end of the clause:

Check compliance by measurement and functional testing.

Figure 1, key

Replace 1 and 4 by the following:

- 1 22 mm cone as specified in ISO 5356-1:2015, Figure 2, with or without a 15 mm coaxial socket
- 4 22 mm socket as specified in ISO 5356-1:2015
