Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is ISO/TC 340, *Natural gas fuelling stations*.

Natural gas fuelling stations — LNG stations for fuelling vehicles

1 Scope

This document specifies the design, construction, operation, maintenance and inspection of stations for fuelling liquefied natural gas (LNG) to vehicles, including equipment, safety and control devices. This document also specifies the design, construction, operation, maintenance, and inspection of fuelling stations for using LNG as an onsite source for fuelling CNG to vehicles (LCNG fuelling stations), including safety and control devices of the station and specific LCNG fuelling station equipment.

NOTE Specific CNG equipment is dealt with in ISO 16923.

This document is applicable to fuelling stations receiving LNG and other liquefied methane-rich gases that comply with local applicable gas composition regulation or with the gas quality requirements of ISO 13686.

This document includes all equipment from the LNG storage tank filling connection up to the fuelling nozzle on the vehicle. The LNG storage tank filling connection itself and the vehicle fuelling nozzle are not covered in this document.

This document includes fuelling stations having the following characteristics:

- private access;
- public access (self-service or assisted);
- metered dispensing and non metered dispensing;
- fuelling stations with fixed LNG storage;
- fuelling stations with mobile LNG storage;
- movable fuelling stations;
- mobile fuelling stations;
- multi-fuel stations.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <https://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>

3.1 ambient vaporizer

heat exchanger that vaporizes LNG with the heat of ambient air

3.2 assembly

sub-system of the fuelling station comprising several components

3.3 approved

having approval for the intended usage from an authority having jurisdiction or having the manufacturer's declaration for intended use

3.4 boil-off gas

gas produced from evaporation of LNG in the LNG storage tank and other parts of the fuelling station including the gas returned from the vehicle tank

3.5 breakaway device

coupling which separates at a predetermined section to protect the fuelling station from damage by vehicles driving away while still connected to the station.

Note 1 to entry: Each separated section contains a self-closing shut-off valve which seals automatically

3.6 buffer storage

one or more suitable pressure vessels designed for the purpose of storing compressed natural gas

3.7 building

structure, usually enclosed by walls and a roof, constructed to provide support or shelter for an intended occupancy

3.8 bund

elevated boundary of the containment, like wall, dike or embankment

3.9 burst pressure

pressure that causes failure and consequential fluid loss through the component envelope

3.10 canopy

roof, overhead shelter, or hood, that affords a degree of weather protection

ISO/DIS 16924:2024(en)**3.11****cold end**

cryogenic part of a reciprocating LNG pump

3.12**competent person**

person having the ability, appropriate training, knowledge and experience, to supervise or carry out the work being undertaken in a safe and proper manner

3.13**compressed natural gas****CNG**

natural gas which has been compressed and stored for use as a vehicle fuel

[SOURCE: ISO 15500-1:2000, 3.2]

3.14**compressor**

machine that increases the pressure of gas

3.15**conduit**

casing, tubing or liner, either metallic or non-metallic

[SOURCE: ISO 14310:2008, 3.6]

3.16**containerized fuelling station**

type of movable LNG fuelling station installed on a single container type skid

3.17**containment**

area, surrounded by a bund, to contain spilled LNG within that area

3.18**cryogenic**

intended for service over the temperature of -153 °C and -196 °C , the lower point being the normal boiling point of nitrogen

3.19**cryogenic pump**

pump that delivers cryogenic fluid at a higher pressure

Note 1 to entry: Pumps used for delivery of LNG to the LNG dispenser are typically centrifugal pumps; however, slow speed reciprocating pumps are also used.

Note 2 to entry: Pumps used for delivery of high-pressure liquid into the high-pressure vaporizer are typically reciprocating piston pumps.

3.20**detachable joint**

mechanical joint that can be readily disassembled

EXAMPLE Flanges, threaded joints and similar.

3.21**dispenser**

equipment through which the fuel is supplied to the vehicle

Note 1 to entry: This equipment can include metering.
