

Designation: B 2 – 00

Standard Specification for Medium-Hard-Drawn Copper Wire¹

This standard is issued under the fixed designation B 2; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

1. Scope

1.1 This specification covers medium-hard-drawn round copper wire for electrical purposes (see Explanatory **Note 1**).

1.2 The SI values of density and resistivity are to be regarded as standard. For all other properties the inch-pound values are to be regarded as standard, and the SI units may be approximate.

2. Referenced Documents

2.1 The following documents of the issue in effect on date of material purchase form a part of this specification to the extent referenced herein:

2.2 *ASTM Standards*:

B 5 Specification for Electrolytic Tough-Pitch Copper Refinery Shapes²

B 49 Specification for Copper Redraw Rod for Electrical Purposes²

B 170 Specification for Oxygen-Free Electrolytic Copper—Refinery Shapes²

B 193 Test Method for Resistivity of Electrical Conductor Materials³

B 258 Specification for Standard Nominal Diameters and Cross-Sectional Areas of AWG Sizes of Solid Round Wires Used as Electrical Conductors³

2.3 *Other Document*:

*NBS Handbook 100—Copper Wire Tables of the National Bureau of Standards*⁴

3. Ordering Information

3.1 Orders for material under this specification should include the following information:

3.1.1 Quantity of each size,

3.1.2 Wire size: diameter in inches (see **5.1** and **Table 1**),

3.1.3 Type of copper, if special (see **Section 4**),

3.1.4 Package size (see **10.1**),

3.1.5 Special package marking, if required, and

3.1.6 Place of inspection (**Section 10**).

4. Materials and Manufacture

4.1 The material shall be copper of such quality and purity that the finished product shall have the properties and characteristics prescribed in this specification.

NOTE 1—Specifications **B 5**, **B 49**, and **B 170** define the materials suitable for use.

4.2 Copper bars of special qualities, forms, or types, as may be agreed upon between the manufacturer and the purchaser, and which will conform to the requirements prescribed in this specification, may also be used.

5. Dimensions and Permissible Variations

5.1 The wire sizes shall be expressed as the diameter of the wire in decimal fractions of an inch to the nearest 0.0001 in. (0.1 mil) or in millimetres to the nearest 0.001 mm (Explanatory **Note 2**).

5.2 Within the range of diameters included in **Table 1** the wire shall not vary from the specified diameter by more than $\pm 1\%$, expressed to the nearest 0.0001 in. (0.1 mil) 0.001 mm.

5.3 Ten percent, but not less than five coils or spools (or all if the lot is less than five) from any lot of wire shall be gaged at three places. If accessible, one gaging shall be taken near each end and one near the middle. If any of the selected coils or spools fails to conform to the requirements prescribed in **5.2**, all coils or spools shall be gaged in the manner specified.

6. Workmanship, Finish, and Appearance

6.1 The wire shall be free from all imperfections not consistent with the best commercial practice.

7. Tensile Properties

7.1 The wire shall conform to the requirements as to tensile properties prescribed in **Table 1** (Explanatory **Note 2** and **Note 3**).

¹ This specification is under the jurisdiction of ASTM Committee B-1 on Electrical Conductors and is the direct responsibility of Subcommittee B01.04 on Conductors of Copper and Copper Alloys.

Current edition approved April 10, 2000. Published June 2000. Originally published as B 2 – 12. Last previous edition B 2 – 94.

0.0508	1.290	2 580	0.00203	1.31	52 330	59 330	360	410	1.0
0.0453	1.151	2 050	0.00161	1.04	52 660	59 660	365	410	1.0
0.0403	1.024	1 620	0.00128	0.823	53 000	60 000	365	415	1.0

7.2 Tests on a specimen containing a joint shall show at least 95 % of the minimum tensile strength given in **Table 1**. Elongation tests shall not be made on a specimen containing a joint.

7.3 For wire the nominal diameter of which is more than 0.001 in. (1 mil) (0.025 mm) greater than a size listed in **Table 1**, but which is less than that of the next larger size, the requirements of the next larger size shall apply.

7.4 Determine the elongation of the wire as the permanent increase in length due to the breaking of the wire in tension, measured between gage marks placed originally 10 in. (254 mm) apart upon the test specimen (**Explanatory Note 4**).

7.5 If any part of the fracture takes place outside the gage marks or in the jaws of the testing machine, or if an examination of the specimen indicates a flaw, the value obtained may not be representative of the material. In such cases the test may be discarded and a new test made.

7.6 *Retests*—If, upon testing a sample from any coil or spool of wire, the results do not conform to the requirements prescribed in **Table 1**, two additional samples shall be tested and the average of the three tests shall determine the acceptance or rejection of the coil or spool.

8. Resistivity

8.1 Electrical resistivity shall be determined on representative samples by resistance measurements (**Explanatory Note 5** and **Note 6**). At a temperature of 20°C the resistivity shall not exceed the following values:

Nominal Diameter, in.	Resistivity at 20°C,	
	Ω-lb/mile ²	Ω-g/m ²
0.460 to 0.325 (11.684 to 8.255 mm), incl	896.15	0.15695
Under 0.325 to 0.0403 (8.255 to 1.024 mm), incl	905.44	0.15858

8.2 Tests to determine conformance to the electrical resistance requirements shall be made in accordance with Test Method **B 193**.

9. Joints

9.1 No joints shall be made in the completed wire (**Explanatory Note 7**). Joints in wire and rods, prior to final drawing, shall be made in accordance with the best commercial practice and shall conform to the requirements prescribed in **7.2**.

10. Inspection

10.1 Unless otherwise specified in the contract or purchase order, the manufacturer shall be responsible for the performance of all inspection and test requirements specified (**Explanatory Note 8**).

10.2 All inspections and tests shall be made at the place of manufacture unless otherwise especially agreed to between the manufacturer and the purchaser at the time of the purchase.

10.3 The manufacturer shall afford the inspector representing the purchaser all reasonable manufacturer's facilities to satisfy that the material is being furnished in accordance with this specification.

10.4 Unless otherwise agreed upon between the purchaser and the manufacturer, conformance of the wire to the various requirements listed in this specification shall be determined on samples taken from each lot of wire presented for acceptance.

10.5 The manufacturer shall, if requested prior to inspection, certify that all wire in the lot was made under such conditions that the product as a whole conforms to the requirements of this specification as determined by regularly made and recorded tests.

10.6 Inspection and Testing Terms:

10.6.1 *Lot*—A lot is any amount of wire of one type and size presented for acceptance at one time; such amount, however, not to exceed 100 000 lb or 45 000 kg (**Explanatory Note 9**).

10.6.2 *Sample*—A sample is a quantity of production units (coils, reels, etc.) selected at random from the lot for the
