

Second edition
2017-03

AMENDMENT 1
2020-02

**Microbiology of the food chain —
Preparation of test samples, initial
suspension and decimal dilutions for
microbiological examination —**

Part 3:

**Specific rules for the preparation of
fish and fishery products**

**AMENDMENT 1: Sample preparation for
raw marine gastropods**

ISO 6887-3:2017/Amd.1:2020

*Microbiologie de la chaîne alimentaire — Préparation des
échantillons, de la suspension mère et des dilutions décimales en vue
de l'examen microbiologique —*

Partie 3: Règles spécifiques pour la préparation des produits de la pêche

*AMENDEMENT 1: Préparation d'échantillons pour gastéropodes
marins crus*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 34, *Food products*, Subcommittee SC 9, *Microbiology*.

A list of all parts in the ISO 6887 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Microbiology of the food chain — Preparation of test samples, initial suspension and decimal dilutions for microbiological examination —

Part 3: Specific rules for the preparation of fish and fishery products

AMENDMENT 1: Sample preparation for raw marine gastropods

7.2.5, fourth paragraph

Replace the paragraph with the following:

For samples where less than 4 h have elapsed between collection and receipt at the laboratory, internal air/sample temperature should be less than the temperature recorded at the time of sampling.

7.3 <https://standards.iteh.ai/catalog/standards/sist/6ec39f51-764f-4e90-bac3-852f439b337f/iso-6887-3-2017-amd-1-2020>

Replace the sentence with the following:

Use the specific procedures given in 7.2.2, 7.2.4 and 7.2.5.

After 9.1.9.2

Add the following text as a new subclause:

9.1.10 Gastropods

Wash at least 10 individuals under running potable water and place them on a sterile tray.

Extract the animal's body using forceps, a winkle picker or shellfish picker. The shells may also be crushed open using a hammer.

For ease of homogenization, it is recommended to dice the flesh while removing shell debris with forceps.

Prepare an initial suspension of approximately 1 in 3 in diluent, homogenize in a rotary or peristaltic homogenizer (6.1). Then, add the required amount of diluent to obtain an accurate 1 in 10 suspension.
