

Designation: ~~C1438-99 (Reapproved 2005)~~^{ε1} Designation: C1438 - 11

Standard Specification for Latex and Powder Polymer Modifiers for Hydraulic Cement Concrete and Mortar¹

This standard is issued under the fixed designation C1438; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

~~^{ε1}Note—Paragraphs 1.2 and 1.3 were revised editorially November 2005.~~

1. Scope*

1.1 This specification covers performance criteria for latexes and redispersible powders when used as modifiers in hydraulic cement concretes and mortars to improve adhesion and reduce permeability (see Note 1).

NOTE 1—For further information concerning theory, benefits, limitations, and applications of polymer-modified hydraulic cementitious mixtures, refer to ACI 548.3R-95/548.3R-09.

~~1.2~~ 1.2 The performance criteria are based on certain property changes that are achieved by use of the polymer modifier when compared to reference concrete or mortar (Test Methods C1439).

~~1.3~~ 1.3 Prepackaged, proprietary mortar products are not included in this specification. Also, this specification covers only those materials contained in the reference or test mixtures listed in Test Methods C1439.

1.4 The values stated in SI units are to be regarded as standard.

1.5 The following precautionary statement pertains only to the test method portion, Section 10, of this specification: *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

3. Terminology

3.1 *Definitions of Terms Specific to This Standard*—Terms used in this specification are defined in Terminology C125 or in this section.

3.1.1 *latex, n*—a dispersion of organic polymer particles in water.

3.1.2 *polymer-modified concrete or mortar, n*—a hydraulic cement concrete or mortar containing a polymer modifier.

3.1.3 *polymer modifier, n*—latex or redispersible powder formulated for use with hydraulic cements.

3.1.4 *redispersible powder, n*—powder that redisperses in water to form a latex.

3.1.5 *reference concrete or mortar, n*—concrete or mortar having the amounts of cement and aggregates given in Test Methods C1439 and having an amount of water to achieve the specified slump or flow.

3.1.6 *test concrete or mortar, n*—concrete or mortar containing a polymer modifier and having the same composition (except for water content) and slump or flow as the reference concrete or mortar.

¹ This specification is under the jurisdiction of ASTM Committee C09 on Concrete and Concrete Aggregates and is the direct responsibility of Subcommittee C09.44 on Polymer-Modified Concrete.
