

EUROPEAN STANDARD

EN 50367

NORME EUROPÉENNE

EUROPÄISCHE NORM

August 2020

ICS 29.280

Supersedes EN 50367:2012 and all of its amendments
and corrigenda (if any)**In accordance with CENELEC/BT Decision D144/010, this consolidated version is purely informal and is intended to be used by the CENELEC National Committees only.**

This document includes Amendment 1, approved by CENELEC on 2022-08-15.

This document includes Amendment 2, approved by CENELEC on 2025-01-24.

The start and finish of text introduced or altered by amendment is indicated in the text by tags

English Version

Railway applications - Fixed installations and rolling stock - Criteria to achieve technical compatibility between pantographs and overhead contact line

Applications ferroviaires - Systèmes de captage de courant
- Critères techniques d'interaction entre le pantographe et la
ligne aérienne de contact (réalisation du libre accès)

Bahnanwendungen - Zusammenwirken der Systeme -
Technische Kriterien für das Zusammenwirken zwischen
Stromabnehmer und Oberleitung für einen freien Zugang

This European Standard was approved by CENELEC on 2020-07-27. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

9.1 General.....	28
9.2 Overhead contact line.....	29
9.2.1 Assessment of overhead contact line design.....	29
9.2.2 Integration of an assessed OCL into a network.....	30

9.3	Pantograph.....	30
9.3.1	Assessment of pantograph design.....	30
9.3.2	Integration of an assessed pantograph into a vehicle.....	30
	Annex A (normative) Special requirements.....	32
A.1	Neutral sections.....	32
A.1.1	Principle of neutral section	32
A.1.2	Long neutral section	32
A.1.3	Short neutral section	33
A.1.4	Split neutral section	33
A.1.5	Arrangement of pantographs on trains.....	34
A.2	Profiles for interoperable pantograph head	35
A.2.1	Pantograph head with length of 1 600 mm	35
A.2.2	Pantograph head with length of 1 950 mm	36
A.3	Additional tests for DC systems at standstill.....	36
A.3.1	General	36
A.3.2	Testing conditions.....	37
A.3.3	Testing method.....	37
A.3.4	Test results	39
A.4	Visualization of mean contact forces.....	39
	Annex B (informative) Data of existing networks	42
B.1	General	42
B.2	National characteristics	42
B.3	General characteristics of pantograph head.....	48
	Annex C (normative) Additional tests for DC at standstill – alternative method – Test method – Single strip configuration.....	55
	Annex D (informative) Specimen calculation for the permissible lateral deviation of the contact wire according to the requirements of 5.2.5 with typical values from the German network	56
D.1	Calculation Values.....	56
D.2	Calculation independent of type of pantograph	58
D.2.1	Calculation of reference height.....	58
D.2.2	Calculation of tolerances of track at the lower verification point	58
D.2.3	Calculation of tolerances of track at the upper verification point.....	58
D.2.4	Calculation of additional overthrow on the inside/outside of the curve for pantographs.....	59
D.2.5	Calculation of quasi static effect	59
D.3	Pantograph head with length of 1600 mm	59
D.3.1	Calculation of lateral movement of contact wire caused by forces from non-horizontal sections of pantograph head	59
D.3.2	Calculation of tolerances of overhead contact line	60
D.3.3	Calculation of width of mechanical kinematic pantograph gauge at minimum verification height of the pantograph gauge in a raised position	60
D.3.4	Calculation of width of mechanical kinematic pantograph gauge at maximum verification height of the pantograph gauge in a raised position	60

EN 50367:2020 (E)

D.3.5	Calculation of width of mechanical kinematic pantograph gauge at reference height for interaction between contact wire and pantograph	60
D.3.6	permissible lateral deviation of the contact wire for stability against dewirement according to 5.2.5.2.....	61
D.3.7	Calculation of width of mechanical kinematic gauge for serviceability of overhead contact line at minimum verification height of the pantograph gauge in a raised position	61
D.3.8	Calculation of width of mechanical kinematic gauge for serviceability of overhead contact line at maximum verification height of the pantograph gauge in a raised position	61
D.3.9	Calculation of width of mechanical gauge for serviceability of overhead contact line gauge at reference height for interaction between contact wire and pantograph	62
D.3.10	Permissible lateral deviation of the contact wire from the track centre line to meet the serviceability limit state case according to 5.2.5.3	62
D.3.11	Permissible lateral deviation of the contact wire from the track centre line according to 5.2.5.3.....	62
D.4	Pantograph head with length of 1 950 mm	63
D.4.1	Calculation of lateral movement of contact wire caused by forces from non-horizontal sections of pantograph head	63
D.4.2	Calculation of tolerances of overhead contact line	63
D.4.3	Calculation of width of mechanical kinematic pantograph gauge at minimum verification height of the pantograph gauge in a raised position	63
D.4.4	Calculation of width of mechanical kinematic pantograph gauge at maximum verification height of the pantograph gauge in a raised position	64
D.4.5	Calculation of width of mechanical kinematic pantograph gauge at reference height for interaction between contact wire and pantograph	64
D.4.6	permissible lateral deviation of the contact wire for stability against dewirement according to 5.2.5.2.....	64
D.4.7	Calculation of width of mechanical kinematic gauge for serviceability of overhead contact line at minimum verification height of the pantograph gauge in a raised position	65
D.4.8	Calculation of width of mechanical kinematic gauge for serviceability of overhead contact line at maximum verification height of the pantograph gauge in a raised position	65
D.4.9	Calculation of width of mechanical gauge for serviceability of overhead contact line gauge at reference height for interaction between contact wire and pantograph	65
D.4.10	Permissible lateral deviation of the contact wire from the track centre line to meet the serviceability limit state case according to 5.2.5.3	65
D.4.11	Permissible lateral deviation of the contact wire from the track centre line according to 5.2.5.3.....	66
D.5	Illustration lateral deviation.....	67
Annex ZZ (informative)	Relationship between this European Standard and the Essential Requirements of EU Directive (EU) 2016/797 aimed to be covered	71
Bibliography	73

European foreword

This document (EN 50367:2020) has been prepared by CLC/SC 9XC “Electric supply and earthing systems for public transport equipment and ancillary apparatus (Fixed installations)”.

The following dates are fixed:

- latest date by which this document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2021-07-27
- latest date by which the national standards conflicting with this document have to be withdrawn (dow) 2023-07-27

This document supersedes EN 50367:2012 and all of its amendments and corrigenda (if any).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a mandate given to CENELEC by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For the relationship with EU Directive(s) see informative Annex ZZ, which is an integral part of this document.

Annex B gives some parameters for existing lines (informative).

Compared with the previous version, the most significant changes in this version are:

- Update of definitions;
- Changes to 5.2.5 concerning the lateral deviation on the basis of RfS 51 from the European Union Agency for Railways;
- Changes in 5.2.7;
- Revision of 5.3.2, including update of figures;
- Improvement of testing method for DC contact strips: 6.3, A.3;
- Addition of tunnel requirements in Clause 7;
- Revision of Table 9;
- Assessment requirements in Clause 9;
- Addition of an introduction for Annex B;
- Addition of Annex C;
- Addition of Annex D.
