## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)) or the IEC list of patent declarations received (see <http://patents.iec.ch>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 29, *Coding of audio, picture, multimedia and hypermedia information*.

A list of all parts in the ISO/IEC 23093 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

## Introduction

The ISO/IEC 23093 series provides an architecture and specifies APIs and compressed representation of data flowing between media things.

The APIs for the media things facilitate discovering other media things in the network, connecting and efficiently exchanging data between media things. The APIs also provide means for supporting transaction tokens in order to access valuable functionalities, resources, and data from media things.

Media things related information consists of characteristics and discovery data, setup information from a system designer, raw and processed sensed data, and actuation information. The ISO/IEC 23093 series specifies data formats of input and output for media sensors, media actuators, media storages, media analyzers, etc. Sensed data from media sensors can be processed by media analyzers to produce analysed data, and the media analyzers can be cascaded in order to extract semantic information.

This document contains the tools to describe data exchanged between media things (e.g. media sensors, media actuators, media analyzers, media storages) and their APIs. It addresses the normative aspects of the data and APIs for media things and also illustrates non-normative examples.

# Information technology — Internet of media things —

## Part 4: Reference software and conformance

### 1 Scope

This document specifies the conformance and reference software implementing ISO/IEC 23093-3. The information provided is applicable for determining the reference software modules available for ISO/IEC 23093-3, understanding the functionality of the available reference software modules, and utilizing the available reference software modules.

Furthermore, this document provides means for conformance testing, i.e. bitstreams – XML descriptions – that conform or do not conform to ISO/IEC 23093-3.

### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 23093-1, *Information technology — Internet of media things — Architecture*

ISO/IEC 23093-2, *Information technology — Internet of media things — Part 2: Discovery and communication API*

ISO/IEC 23093-3, *Information technology — Internet of media things — Part 3: Media data formats and APIs*

### 3 Terms, definitions and abbreviated terms

#### 3.1 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 23093-1, ISO/IEC 23093-2 and ISO/IEC 23093-3 apply.

#### 3.2 Abbreviated terms

<b>API</b>	application programming interface
<b>MACV</b>	media actuator command vocabulary
<b>MAOV</b>	media analyzer output vocabulary
<b>MSOV</b>	media sensor output vocabulary
<b>MTDL</b>	media thing description language

## 4 Reference software for ISO/IEC 23093-3

### 4.1 General

This clause specifies the reference software for ISO/IEC 23093-3. The software is available at: <https://standards.iso.org/iso-iec/23093/-4/ed-1/en>. The reference software is written in Java®<sup>1)</sup> and adopts the following package structure:

Name	Definition
org	Java package name for reference software provided by organizations such as ISO/IEC, W3C, or similar.
org.iso	Java package name for reference software provided by ISO/IEC.
org.iso.mpeg	Java package name for reference software.
org.iso.mpeg.iomt	Java package name for reference software provided in the course of the development of the ISO/IEC 23093 series.  - org.iso.mpeg.iomt.mtdl, org.iso.mpeg.iomt.msov, org.iso.mpeg.iomt.macv, and org.iso.mpeg.iomt.maov for ISO/IEC 23093-3.  NOTE Code included within these packages can be generated automatically by using tools such as JAXB (Java Architecture for XML Binding) <sup>[1]</sup> .

### 4.2 ISO/IEC 23093-3 APIs for MTDL

#### 4.2.1 General

This clause specifies the API to the ISO/IEC 23093-3 reference software. The API is defined in Java® and adopts the following package structures:

Name	Definition
org.iso.mpeg.iomt.mtdl	Java package name for API to the ISO/IEC 23093-3 reference software.

#### 4.2.2 APIs for MThing

This clause specifies classes which are related to basic information of an MThing.

Name	Definition
MThingInfo	Java class which contains essential elements and attributes for an MThing.
MSensorType	Java class which is the super class that shall be extended by all of media sensors.
MActuatorType	Java class which is the super class that shall be extended by all of media actuators.
MAnalyzerType	Java class which is the super class that shall be extended by all of media analyzers.
MStorageType	Java class which is the super class that shall be extended by all of media storages.
MManagerType	Java class which is the super class that shall be extended by all of MThing managers.
MAggregatorType	Java class which is the super class that shall be extended by all of MThing aggregators.

1) Java® is the trademark of a product supplied by Oracle®. This information is given for the convenience of users of this document and does not constitute an endorsement by ISO or IEC of the product named. Equivalent products may be used if they can be shown to lead to the same results.

#### 4.2.3 APIs for MSensor

This clause specifies classes which are related to an MSensor.

Name	Definition
SensedDataBaseType	Java class for describing a sensed data. All of the classes which are in the org.iso.mpeg.iomt.msosv shall extend this class.
SensorCapabilityListEnumType	Java class for specifying the type of sensor capabilities among allSensorCapabilityList, availableSensorCapabilityList, and appliedSensorCapabilityList.
SensorCapabilityListType	Java class for describing a list of sensor capabilities.
SensorCapabilityParameterType	Java class for describing a parameter of a sensor capability.
SensorCapabilityType	Java class for describing a sensor capability.

#### 4.2.4 APIs for MActuator

This clause specifies classes which are related to an MActuator.

Name	Definition
ActuationDataBaseType	Java class for describing an actuation data. All of the classes which are in the org.iso.mpeg.iomt.macs shall extend this class.
ActuatorCapabilityListEnumType	Java class for specifying the type of actuator capabilities among allActuatorCapabilityList, availableActuatorCapabilityList, and appliedActuatorCapabilityList.
ActuatorCapabilityListType	Java class for describing a list of actuator capabilities.
ActuatorCapabilityParameterType	Java class for describing a parameter of an actuator capability.
ActuatorCapabilityType	Java class for describing an actuator capability.

#### 4.2.5 APIs for MAnalyzer

This clause specifies classes which are related to an MAnalyzer.

Name	Definition
AnalyzedDataBaseType	Java class for describing the analysed data. All of the classes which are in the org.iso.mpeg.iomt.maov shall extend this class.
AnalyzerCapabilityListEnumType	Java class for specifying the type of analyzer capabilities among allAnalyzerCapabilityList, availableAnalyzerCapabilityList, and appliedAnalyzerCapabilityList.
AnalyzerCapabilityListType	Java class for describing a list of analyzer capabilities.
AnalyzerCapabilityParameterType	Java class for describing a parameter of an analyzer capability.
AnalyzerCapabilityType	Java class for describing an analyzer capability.

#### 4.2.6 APIs for MStorage

This clause specifies classes which are related to an MStorage.

Name	Definition
StorageCommandBaseType	Java class for describing a storage command.
