Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 38, *Textiles*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 248, *Textile and textile products*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This second edition cancels and replaces the first edition (ISO 1833-25:2013), which has been technically revised.

The main changes compared to the previous editions are as follows:

- the title has been changed from “Mixtures of polyester **and** certain other fibres...” to “Mixtures of polyester **with** certain other fibres...”;
- in the introduction, explanations have been added;
- in the scope, remaining fibres have been named;
- the mandatory [Clause 3](#), Terms and definitions, has been added;
- in [Clause 8](#) (former Clause 7) a specific *d* factor for polyacrylate has been added.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

Chloroform is said to be harmful for operators. Safety is secured by strict operation according to safety regulations or precautions. However, alternative methods intended for the dissolution of polyester are given References [1] and [2].

With quantitative analysis of fibre mixtures, polyester is usually the remaining fibre and the other fibres are dissolved.

The method described in this document is useful when the other fibres are insoluble in the usual solvents.
