Contents

Foreword.....v

Introduction.....vi

1 Scope.....1

2 Normative references.....1

3 Terms and definitions.....1

4 Abbreviated terms.....5

5 Fundamentals.....5

5.1 General description of hydrogen embrittlement.....5

5.2 Conditions for hydrogen embrittlement failure.....6

5.3 Mechanism of hydrogen embrittlement of high strength steel.....10

5.4 Fundamentals of metallic coatings regarding hydrogen uptake and diffusion11

6 Preventive measures with regard to hydrogen embrittlement.....16

6.1 General.....16

6.2 Part design and manufacturing17

6.3 Material related measures and heat treatment.....17

6.4 Reduction of residual tensile stress (stress relief).....18

6.5 Measures related to coating processes.....18

6.6 Prevention of environmental hydrogen uptake.....21

Annex A (informative) Electroplating processes.....23

Annex B (informative) Principles of electrochemical corrosion.....25

Bibliography29

3 Terms and definitions.....1

4 Abbreviated terms.....5

5 Fundamentals.....6

5.1 General description of hydrogen embrittlement.....6

5.2 Conditions for hydrogen embrittlement failure.....6

5.2.1 General.....6

5.2.2 Material susceptibility.....7

5.2.3 Tensile stress.....7

5.2.4 Sources of atomic hydrogen.....8

5.3 Mechanism of hydrogen embrittlement of high strength steel.....9

5.4 Fundamentals of metallic coatings with regard to hydrogen uptake and diffusion.....10

5.4.1 General aspects of metallic electroplated protection layers10

5.4.2 Hydrogen generation during coating process.....10

5.4.3 Corrosion protection mechanisms by metallic layers.....10

5.4.4 Hydrogen formation by corrosion.....12

6 Preventive measures with regard to hydrogen embrittlement.....13

6.1 General.....13

6.2	Part Design and Manufacturing	13
6.3	Material related measures and heat treatment	14
6.4	Reduction of residual tensile stress (stress relief)	14
6.5	Measures related to coating processes	15
6.5.1	General	15
6.5.2	Pre-treatment – Cleaning processes	15
6.5.3	Electroplating coating processes	16
6.5.4	Stripping of coatings	16
6.5.5	Corrective actions – Baking	17
6.6	Prevention of environmental hydrogen uptake	18
6.6.1	General	18
6.6.2	Environmentally appropriate design	18
7	Test categories	18
	Annex A (informativ) Electroplating processes	19
A.1	General	19
A.2	Exemplary characteristics of electroplating processes	19
A.2.1	Example 1 – Mild acid zinc	19
A.2.2	Example 2 – Alkaline zinc (cyanide free)	19
	Annex B (informativ) Principles of electrochemical corrosion	21
	Bibliography	24

ISO/FDIS 24251-1

<https://standards.iteh.ai/catalog/standards/iso/6d70e2aa-4f7b-43e2-88a7-a353d1aebc2d/iso-fdis-24251-1>

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 107, *Metallic and other inorganic coatings*, Subcommittee SC 3, *Electrodeposited coatings and related finishes*.

A list of all parts in the ISO 24251 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
