Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part-1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part-2 (see www.iso.org/directives).

~~Attention is drawn to the possibility that some of the elements implementation of this document may be involve the subject of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).~~

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry, Subcommittee SC 19, Agricultural electronics*.

The document is intended to be used in conjunction with [the ISO 11783 series](#) and the other parts of ISO 23316.

A list of all parts in the ISO 23316 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

0.1 General

Due to the requirements of modern agriculture, the precise control of implement functions is a key issue in agricultural technology. The required precision is difficult to achieve with mechanical or hydraulic devices; it is more efficient to provide control with electric and electronic means, i.e. electric power and ISOBUS. The use of electric power allows implement manufacturers to offer farmers improved implements that provide a higher degree of automation and navigation, resulting in greater precision, better power distribution, and better controllability.

The purpose of the ISO 23316 series is to provide a design and application standard covering implementation of electrical high-power interfaces operating with a nominal voltage of 700 V DC/480 V AC for manufacturers of agricultural machinery.

The ISO 23316 series specifies the physical and logical interface requirements that provide interoperability and cross compatibility for systems and equipment.

Conformance to the ISO 23316 series means all applicable requirements from ISO 23316-1 to ISO 23316-7 are met.

It is permitted for partial systems or components to conform to the ISO 23316 series by applying all applicable requirements, for example, for the plug, receptacle, or inverters, on a tractor or an implement.

NOTE 1 If a DC-mode only HPI is provided, it is not necessary to conform with ISO 23316-4 which describes AC-mode, as it is not applicable. If an AC-mode only HPI is provided, it is not necessary to conform with ISO 23316-5 which describes DC-mode, as it is not applicable.

The ISO 23316 series defines an interface between a power providing device (supply system) and a power consuming device (consumer system), used within an automated electrified system in the agricultural industry. This series deals with electrical, mechanical and bus communication objectives and is used in conjunction with ISO 11783, which defines the ISOBUS. Figure 1 portrays the elements of typical equipment that involve the high-power interface.

The following aspects are not within the scope of ISO 23316:

- ~~Service~~service, maintenance, and related diagnostics;
- ~~Functional~~functional safety;
- ~~Control~~control strategies for high-power supplies and loads;
- ~~Application~~application-specific strategies and operational modes;
- ~~Component~~component design;
- ~~Energy~~energy storage systems, e. g. supercapacitors or batteries;
- ~~Multiple~~multiple electrical power supplies to a common DC link.

NOTE 2 Annex D (informative) Annex D lists some basic diagnostics by DTCs.

NOTE 3 For example, AEF guideline 007 handles some aspects of functional safety already.

0.2 Patent

The International Organization for Standardization draws attention to the fact that it is claimed that compliance with this document may involve the use of a patent.

ISO takes no position concerning the evidence, validity and scope of this patent right.

The holder of this patent right has assured ISO that he/she is willing to negotiate licences under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statement of the holder of this patent right is registered with ISO. Information may be obtained from the patent database available at www.iso.org/patents.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those in the patent database. ISO shall not be held responsible for identifying any or all such patent rights.

Tractors and machinery for agriculture and forestry — Electrical high-power interface — 700 V DC / 480 V AC

Part 6: Communication signals

1 Scope

This document specifies the communication interface, so that the transmitted parameters, signals and objects between a supply system (SS), with power converter / switch (PC/S) and High Power Interface — Master Control / high power interface — master control (HPI-MC) including the Tractor Implement Management / tractor implement management (TIM) server, and a Consumer System / consumer system (CS), with Application / application (APP) and High Power Interface — Control / high power interface — control (HPI-C) including the TIM client and the task controller, can be used in the agricultural industry. The mentioned signals are used during identification, initialization, operation, and shutdown modes of operation.

This document does not cover the definitions of Suspect Parameter Numbers / suspect parameter numbers (SPNs) for the signals, within the Parameter Group Numbers / parameter group numbers (PGNs) for messages and the message setup. These definitions are given in ISO 11783 and SAE J1939.

NOTE For information on messages (PGNs) see also Annex B / Annex B.

2 Normative References

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. 3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 23316 ~~(all parts)~~-1, ISO 23316-2, ISO 23316-4, ISO 23316-5, ISO 23316-7 and the following apply.

ISO and IEC maintain ~~terminological~~ terminology databases for use in standardization at the following addresses:

- ~~ISO Online browsing platform:~~ available at ~~https://www.iso.org/obp~~ https://www.iso.org/obp
- ~~IEC Electropedia:~~ ~~_____~~ available at ~~https://www.electropedia.org/~~ https://www.electropedia.org/

3.1

direction of rotation

positive values for frequency or speed related to powering the power converter phases in the sequence U V W positive torque means torque in the direction of positive speed

Note 1 ~~to entry~~: If not stated otherwise (e.g. ground speed), the term 'speed' within this document refers always to rotational movement.

3.2

fieldbus main device

device integrated within inverter onboard supply system, controls actively the communication within the fieldbus network and requests/receives data to/from the *fieldbus subdevice* ~~(3.20, (3.3))~~, (subordinated controller) in a cyclically and time-wise deterministic manner

3.3

fieldbus subdevice

device integrated within LLB on-board consumer system receives data (e.g. requests) from and provides data (e.g. feedback) to the *fieldbus main device* ~~(3.19, (3.2))~~ passively

3.4

insulation monitor

IM

device monitoring the ungrounded system between an active phase conductor and the equipotential bonding

~~Edited DIS~~
~~MUST BE USED~~
~~FOR FINAL~~
~~DRAFT~~

3.5 power converter ~~/~~ switch control

PC/S-C

control for AC mode, a power converter; for DC mode, a switch such as a contactor or solid-state switch, typically an integral part of the PC/S-C

3.6 minimum isolation resistance

MIR

value in failure free condition but at worst case ambient conditions (considering humidity, fluids, cooling type, etc. in operation)

3.7 multi consumer system

MCS

system of more than one consumer systems or consumer system trains, connected to the HPI in any combination of a series or parallel configuration

3.8 online insulation monitor

OIM

system to measure the overall system isolation resistance onboard of the initial supply system

3.9 parameter group number

PGN

a ~~three~~ 3-byte CAN Message, 24 bit, representation of the ~~Extended Data Page, Data Page, extended data page, data page, protocol data unit (PDU-Format) format, and group extension (GE) fields~~

[SOURCE: ISO 11783-1:2017, 3.44]

Note 1 to entry: The ~~Parameter Group Number~~ parameter group number uniquely identifies a particular ~~Parameter Group~~ parameter group.

3.10 pre-charge procedure

capacitor charging procedure to balance different DC link voltage levels

3.11 pre- and discharge unit

unit to pre- or discharge the DC link connected via HPI, typically an integral part of the PC/S-C

3.12 supply system master

SS-M

supply system that includes the initial power source, such as generator/rectifier unit or fuel cell, commonly the tractor, typically the HPI-MC also resides there

3.13 suspect parameter number

SPN

19-bit number used to identify a particular element, component, or parameter associated with a control function

~~Edited DIS-~~
~~MUST BE USED~~
~~FOR FINAL~~
~~DRAFT~~
