## Plastics - Poly(vinyl chloride) (PVC) based profiles - Determination of the strength of welded corners and T- joints

Plastiques - Profilés à base de poly(chlorure de vinyle)  
(PVC) - Détermination de la résistance des  
assemblages soudés en angle et en T

Kunststoffe - Profile auf Basis von Polyvinylchlorid  
(PVC) - Bestimmung der Festigkeit verschweißter  
Ecken und T-Verbindungen

This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/TC 249.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

**Warning** : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

## **European foreword**

This document (prEN 514:2024) has been prepared by Technical Committee CEN/TC 249 "Plastics", the secretariat of which is held by SIS.

This document is currently submitted to the CEN Enquiry.

This document will supersede EN 514:2018.

This document includes the following significant technical changes with respect to EN 514:2018:

- term 3.1 "failure load" has been revised;
- in 5.1 the measuring range of load for the tensile or compression testing machine has been expanded.

## prEN 514:2024(E)

### 1 Scope

This document specifies a tensile bending method and a compression bending method for determining the failure stress of welded corners and welded T-joints made from unplasticized poly(vinyl chloride) (PVC-U) profiles.

It is applicable to PVC based profiles used for the fabrication of windows and doors.

### 2 Normative references

There are no normative references in this document.

### 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <https://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>

#### 3.1

##### failure load

load at which the test specimen breaks corresponding with the maximum load during test

### 4 Principle

Welded corners and T-joints made from unplasticized poly(vinyl chloride) (PVC-U) profiles are subjected to a tensile bending or compression bending test at specified temperature and test speed.

The failure load is recorded and the failure stress is calculated.

### 5 Apparatus

#### 5.1 Tensile or compression testing machine

Tensile or compression testing machines are used with the following specifications:

- a) measuring range of load: 0,2 kN to 20 kN;
- b) load indication with zero point setting and peak recording;
- c) measurement accuracy:  $\pm 3$  %;
- d) test speed:  $(50 \pm 5)$  mm/min.

#### 5.2 Test arrangements

##### 5.2.1 Corner weld samples for tensile bending test (see Figure 1)
