## Condition monitoring and diagnostics of machines — Requirements for qualification and assessment of personnel —

### Part 6: Acoustic emission

iTeh STANDARD PREVIEW  
(standards.iteh.ai)

*Surveillance et diagnostic d'état des machines — Exigences relatives  
à la qualification et à l'évaluation du personnel —*

*Partie 6: Émission acoustique*

<https://standards.iteh.ai/catalog/standards/sist/792336bf-8377-4243-9e1d-33857b4e04d6/iso-fdis-18436-6>

RECIPIENTS OF THIS DRAFT ARE INVITED TO SUBMIT, WITH THEIR COMMENTS, NOTIFICATION OF ANY RELEVANT PATENT RIGHTS OF WHICH THEY ARE AWARE AND TO PROVIDE SUPPORTING DOCUMENTATION.

IN ADDITION TO THEIR EVALUATION AS BEING ACCEPTABLE FOR INDUSTRIAL, TECHNOLOGICAL, COMMERCIAL AND USER PURPOSES, DRAFT INTERNATIONAL STANDARDS MAY ON OCCASION HAVE TO BE CONSIDERED IN THE LIGHT OF THEIR POTENTIAL TO BECOME STANDARDS TO WHICH REFERENCE MAY BE MADE IN NATIONAL REGULATIONS.

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2. [www.iso.org/directives](http://www.iso.org/directives)

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received. [www.iso.org/patents](http://www.iso.org/patents)

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT), see the following URL: [Foreword - Supplementary information](#)

This document was prepared by Technical Committee ISO/TC 108, *Mechanical vibration, shock and condition monitoring*, Subcommittee SC 5, *Condition monitoring and diagnostics of machines*.  
[ISO/FDIS 18436-6](#)

This third edition cancels and replaces the second edition (ISO 18436-6:2014), of which it constitutes a minor revision. The changes compared to the previous edition are as follows:

- in Table A.2, the ISO reference standards have been cited more precisely;

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

## Introduction

The use of acoustic emission technology in condition monitoring is one of the key activities in predictive maintenance programmes for most industries. Other non-intrusive technologies including infrared thermography, vibration analysis, lubricant analysis, wear debris analysis and motor current analysis are used as complementary condition analysis tools. Those in the manufacturing industry who have diligently and consistently applied these technologies have experienced a return on investment far exceeding their expectations. However, the effectiveness of these programmes depends on the capabilities of individuals who perform the measurements and analyse the data.

A programme, administered by an assessment body, has been developed to train and assess the competence of personnel whose duties require the appropriate theoretical and practical knowledge of machinery condition monitoring and diagnostics.

This document defines the requirements against which personnel in the non-intrusive machinery condition monitoring and diagnostics technologies associated with acoustic emission for machinery condition monitoring are to be qualified and the methods of assessing such personnel.

# Condition monitoring and diagnostics of machines — Requirements for qualification and assessment of personnel —

## Part 6: Acoustic emission

### 1 Scope

This document specifies the requirements for qualification and assessment of personnel who perform machinery condition monitoring and diagnostics using acoustic emission.

A certificate or declaration of conformity to this document will provide recognition of the qualifications and competence of individuals to perform acoustic emission measurements and analysis for machinery condition monitoring using acoustic emission equipment. This procedure may not apply to specialized equipment or other specific situations.

This document specifies a three-category classification programme that is based on the technical areas delineated herein.

### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 13372, *Condition monitoring and diagnostics of machines — Vocabulary*

ISO 13374 (all parts), *Condition monitoring and diagnostics of machine systems — Data processing, communication and presentation*

ISO 13379-1, *Condition monitoring and diagnostics of machines — Data interpretation and diagnostics techniques — Part 1: General guidelines*

ISO 17359, *Condition monitoring and diagnostics of machines — General guidelines*

ISO 18436-1, *Condition monitoring and diagnostics of machines — Requirements for certification of personnel — Part 1: Sector specific requirements for certification bodies and the certification process*

ISO 18436-3, *Condition monitoring and diagnostics of machines — Requirements for qualification and assessment of personnel — Part 3: Requirements for training bodies and the training process*

EN 13554, *Non-destructive testing — Acoustic emission — General principles*

EN 1330-9, *Non-destructive testing — Terminology — Part 9: Terms used in acoustic emission testing*

EN 13477-1, *Non-destructive testing — Acoustic emission — Equipment characterization — Part 1: Equipment description*

ASTM E2374-10, *Standard Guide for Acoustic Emission System Performance Verification*

ASTM E1106-12, *Standard Test Method for Primary Calibration of Acoustic Emission Sensors*

ASTM E650-M12, *Standard Guide for Mounting Piezoelectric Acoustic Emission Sensors*

### 3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 13372, ISO/IEC 17000, EN 1330-9 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

#### 3.1 trainee

person who is being trained to become qualified

### 4 Classification of personnel (acoustic emission)

#### 4.1 General

Individuals assessed as conforming to the requirements of this document shall be classified in one of three categories, depending upon their qualifications. They shall have demonstrated the necessary skills in acoustic emission condition monitoring for their category as indicated in [Annex A](#).

Personnel classified as Category II need to have all the knowledge and skills expected of personnel classified as Category I, while personnel classified as Category III need to have all the knowledge and skills expected of personnel classified as Category II.

#### 4.2 Category I

Individuals classified as Category I are qualified to perform acoustic emission measurements according to established and recognized procedures. Personnel classified as Category I shall be able to:

- a) apply a specified acoustic emission measurement procedure;
- b) set up and verify operation of equipment for basic acoustic emission data collection;
- c) verify the integrity of collected data and prevent or control poor data;
- d) perform basic acoustic emission analysis;
- e) record and categorize the results in terms of written criteria;
- f) maintain a database of results or trends; and
- g) evaluate and report test results in accordance with instructions.

Persons classified as Category I shall not be regarded as competent to choose the test method or technique to be used nor to assess the test results.

### 4.3 Category II

Individuals classified as Category II are qualified to perform and/or direct acoustic emission analysis according to established and recognized procedures, and will be aware of the limitations of the acoustic emission method. Personnel classified as Category II shall be able to:

- a) select the appropriate acoustic emission technique;
- b) define the limitations of the application;
- c) specify the appropriate hardware and software for both portable and permanently installed systems;
- d) set up and verify equipment settings;
- e) measure and perform diagnosis of acoustic emission signals;
- f) measure, interpret and analyse acoustic emission data;
- g) verify the calibration of acoustic emission measurement systems;
- h) prepare reports on condition, recommend appropriate corrective actions and comment on effectiveness of repairs;
- i) provide technical direction to acoustic emission personnel at or below Category II;
- j) carry out, supervise and instruct all Category I duties; and
- k) be aware of the use of alternative condition monitoring (CM) technologies, at least to Category I level.

### 4.4 Category III

ISO/FDIS 18436-6

<https://standards.iteh.ai/catalog/standards/sist/792336bf-8377-4243-9e1d-3185754e04d6/sist/18436-6>

Individuals classified as Category III are qualified to perform and/or direct all types of acoustic emission measurements and analysis. Personnel classified as Category III shall be able to:

- a) apply acoustic emission theory and techniques, including measurement and interpretation of survey results;
- b) understand and perform data analysis, including limitations;
- c) determine the acoustic emission data acquisition systems and component assemblies;
- d) use non-standard techniques for acoustic emission and fault diagnosis;
- e) recommend all generally recognized types of corrective actions;
- f) interpret and evaluate standards, codes, specifications and procedures;
- g) establish acoustic emission programmes, including determination of the requirement for periodic/continuous monitoring, frequency of testing, etc.;
- h) establish programmes for acceptance and severity criteria for new and in-service systems and faulty equipment;
- i) perform prognostics for fault conditions;
- j) recommend the use of alternative or supplementary condition monitoring (CM) technologies; and
- k) guide personnel below Category III.

**NOTE** It is the employer's responsibility to ensure that category III personnel have the necessary competency in the required management skills, for example, creating budgets, preparing cost justifications and managing personnel development.

## 5 Eligibility

### 5.1 General

Candidates should have a combination of education, training and experience to ensure that they understand the principles and procedures applicable to acoustic emission measurement and analysis.

### 5.2 Education

Candidates seeking classification do not need to provide evidence of formal education to establish eligibility. However, it is recommended that Category I and II candidates have at least a secondary school graduate qualification or its equivalent. Category II and III candidates shall be able to manipulate simple algebraic equations, use a basic scientific calculator (including trigonometric and logarithmic functions), and be familiar with the operation of personal computers. Successful completion of two or more years of mechanical technology or mechanical engineering at an accredited college, university or technical school is highly recommended for candidates seeking classification to Category III.

### 5.3 Training

#### 5.3.1 Introduction

To be eligible to apply for assessment based on this document and ISO 18436-3, the candidates shall provide evidence of successful completion of training based on the requirements of A.2. The training syllabus in A.2 includes the requirement for practical knowledge and practical skills training within the relevant topics. Annex B shall provide the body of knowledge for the training syllabus. The minimum duration of cumulative training is shown in Table 1. Training should be in the form of lectures, demonstrations, practical exercises or formal training courses.

Qualification requirements shall be in accordance with this document. Training time devoted to each topic shall be in accordance with A.2 and Table 1.

**Table 1 — Minimum duration of cumulative training (hours)**

Category I	Category II	Category III
40	80	120

Training may be modularized into two or more subject areas covering general scientific principles and application-specific knowledge in order to allow mutual recognition between non-destructive testing and condition monitoring assessment bodies.

#### 5.3.2 Additional training on machine knowledge

In addition to the training hours shown in Table 1 and detailed in A.2, candidates should attend formal or on-the-job machinery and component training of at least a similar duration to that shown in Table 1.

Such training shall be in addition to any formal education compliant with 5.2, inclusive of any college or university education. If undertaken, the additional training shall cover the design, implementation, operation and maintenance principles of machines and components, and the failure modes and mechanisms associated with each principle. Such training shall be validated by verifiable records.

## 5.4 Experience

**5.4.1** To be eligible to apply for assessment based on this document, the candidate shall provide evidence to the assessment body of experience in the field of acoustic emission condition monitoring in
