This draft European Standard is submitted to CENELEC members for enquiry.
Deadline for CENELEC: 2025-01-10.

It has been drawn up by CLC/TC 215.

If this draft becomes a European Standard, CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CENELEC in three official versions (English, French, German).
A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

prEN 50600-3-1:2024 (E)**180 European foreword**

181 This document prEN 50600-3-1:2024 has been prepared by CLC/TC 215 “Electrotechnical aspects of
182 telecommunication equipment”.

183 This document is currently submitted to the Enquiry.

184 The following dates are proposed:

- latest date by which the existence of this (doa) dor + 6 months
document has to be announced at national
level
- latest date by which this document has to be (dop) dor + 12 months
implemented at national level by publication of
an identical national standard or by
endorsement
- latest date by which the national standards (dow) dor + 12 months
conflicting with this document have to be (to be confirmed or
withdrawn modified when voting)

185 This document will supersede EN 50600-3-1:2016 and all of its amendments and corrigenda (if any).

186 prEN 50600-3-1:2024 includes the following significant technical changes with respect to
187 EN 50600-3-1:2016:

- 188 a) the document has been completely revised and restructured;
- 189 b) new clauses on data centre strategy, organisation, data centre management, risk management and
190 quality management have been added;
- 191 c) existing clauses on operational information and parameters and on acceptance test have been included
192 in the clause on operational processes.

193 This document has been prepared under a standardization request addressed to CENELEC and ETSI by the
194 European Commission. The Standing Committee of the EFTA States subsequently approves these requests
195 for its Member States.

196 Introduction

197 The unrestricted access to internet-based information demanded by the information society has led to an
198 exponential growth of both internet traffic and the volume of stored/retrieved data. Data centres are housing
199 and supporting the information technology and network telecommunications equipment for data processing,
200 data storage and data transport. They are required both by network operators (delivering those services to
201 customer premises) and by enterprises within those customer premises.

202 Data centres need to provide modular, scalable and flexible facilities and infrastructures to easily
203 accommodate the rapidly changing requirements of the market. In addition, energy consumption of data
204 centres has become critical both from an environmental point of view (reduction of carbon footprint) and with
205 respect to economic considerations (cost of energy) for the data centre operator.

206 The implementation of data centres varies in terms of:

- 207 a) purpose (enterprise, co-location, co-hosting, or network operator facilities);
- 208 b) security level;
- 209 c) physical size;
- 210 d) accommodation (mobile, temporary and permanent constructions).

211 The needs of data centres also vary in terms of availability of service, the provision of security and the
212 objectives for energy efficiency. These needs and objectives influence the design of data centres in terms of
213 building construction, power distribution, environmental control, telecommunications cabling and physical
214 security as well as the operation of the data centre. Effective management and operational information is
215 required to monitor achievement of the defined needs and objectives.

216 Recognizing the substantial resource consumption, particularly of energy, of larger data centres, it is also
217 important to provide tools for the assessment of that consumption both in terms of overall value and of
218 source mix and to provide Key Performance Indicators (KPIs) to evaluate trends and drive performance
219 improvements.

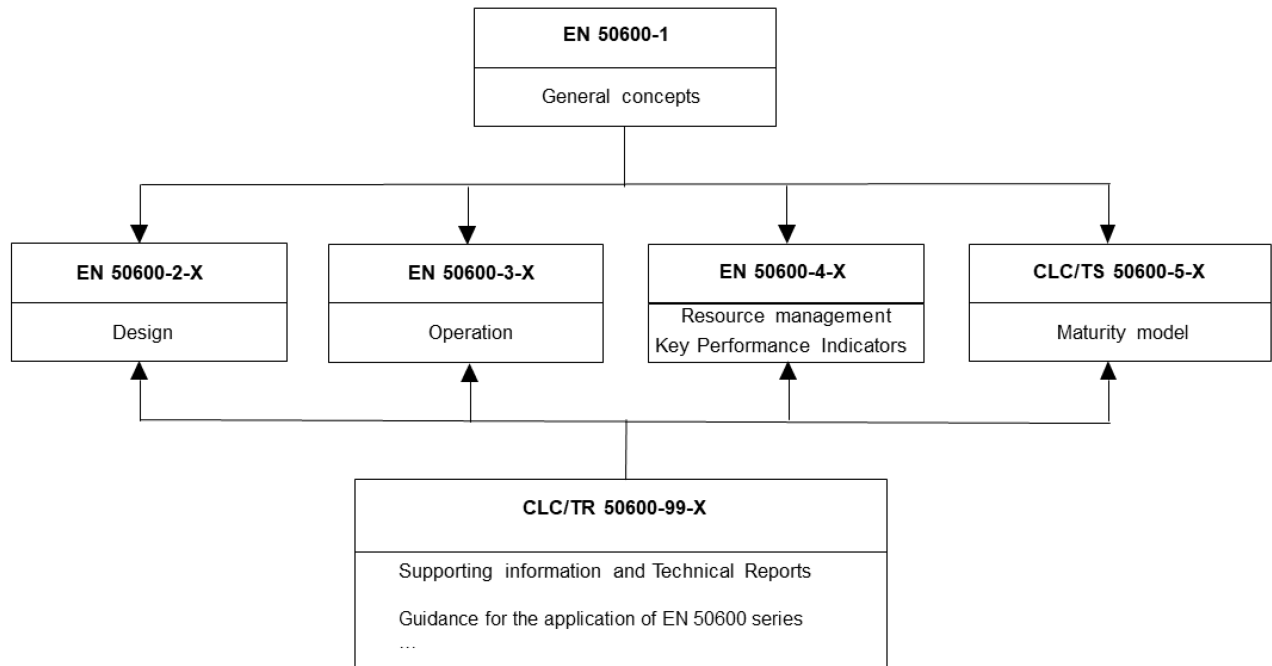

220 At the time of publication of this document, the EN 50600 series is designed as a framework of standards
221 and other documents covering the design, the operation and management, the key performance indicators
222 for energy efficient operation of the data centre as well as a maturity model for energy management and
223 environmental sustainability.

224 This series of European Standards specifies requirements and recommendations to support the various
225 parties involved in the design, planning, procurement, integration, installation, operation and maintenance of
226 facilities and infrastructures within data centres. These parties include:

- 227 1) owners, operators, facility managers, IT managers, project managers, main contractors;
- 228 2) consulting engineers, architects, building designers and builders, system and installation designers,
229 auditors, test and commissioning agents;
- 230 3) facility and infrastructure integrators, suppliers of equipment;
- 231 4) installers, maintainers.

232 This document is intended for use by and collaboration between facility managers, ICT managers, and main
233 contractors.

234 The inter-relationship of the documents within the EN 50600 series is shown in Figure 1.

235

236

Figure 1 — Schematic relationship between the EN 50600 series of documents

237 EN 50600-1 introduces the general concepts relevant for the design and operation of data centres.

238 The EN 50600-2 series of documents define the requirements for the data centre design and specify
 239 requirements and recommendations for particular facilities and infrastructures to support the relevant
 240 classification for “availability”, “physical security” and “energy efficiency enablement” selected from
 241 EN 50600-1.

242 The EN 50600-3 series of documents specify requirements and recommendations for data centre
 243 operations, processes and management.

244 The EN 50600-4 series of documents specify requirements and recommendations for key performance
 245 indicators (KPIs) used to assess and improve the resource usage efficiency and effectiveness, respectively,
 246 of a data centre.

247 CLC/TS 50600-5-1 specifies the maturity model for energy management and environmental sustainability
 248 and refers amongst others to EN 50600-4-X KPIs as appropriate.

249 The CLC/TR 50600-99 series of Technical Reports cover guidance for specific topics around data centre
 250 operation and design.

251 *Secretary note: Verify this sentence during enquiry.*

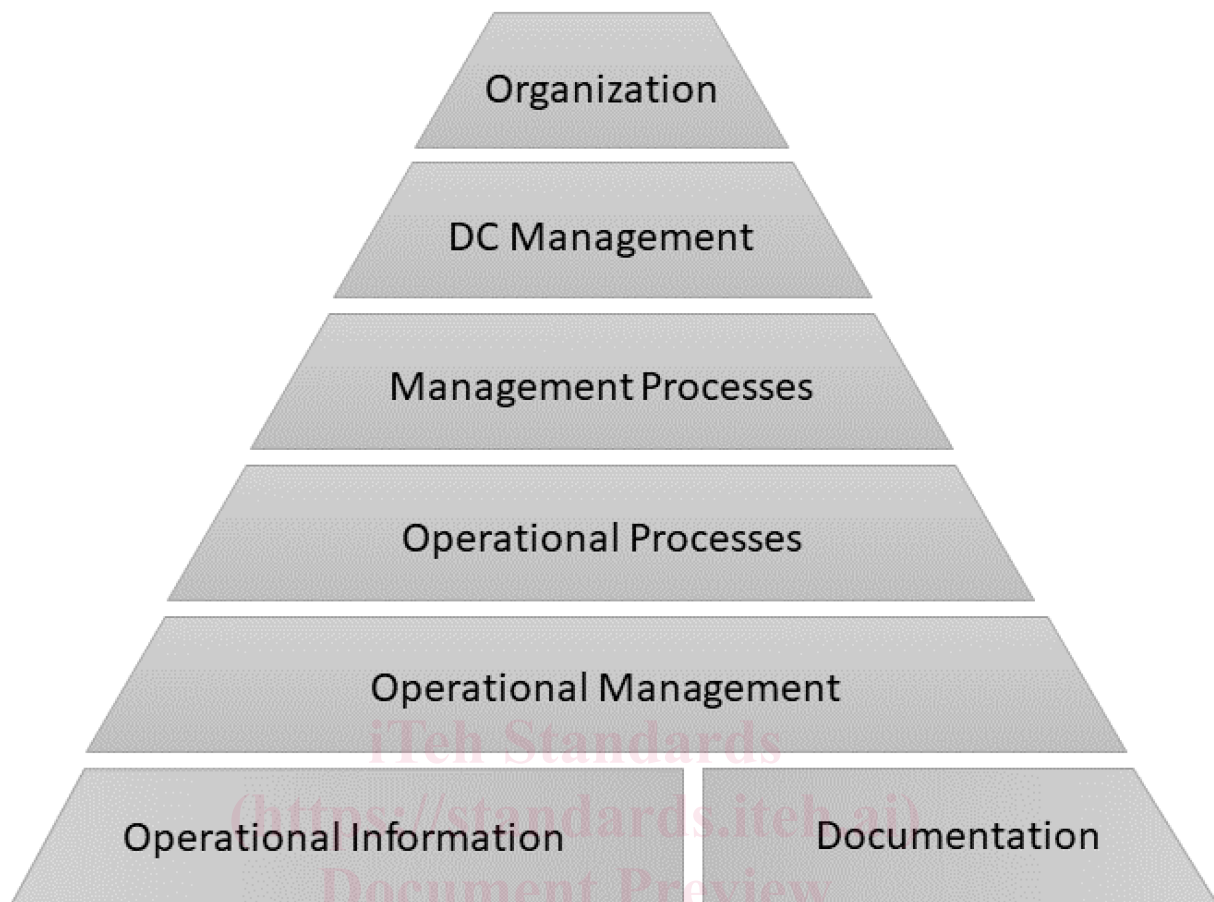

252 This document addresses the operational and management information (in accordance with the
 253 requirements of EN 50600-1). A data centre’s primary function typically is to house large quantities of
 254 computer and telecommunications hardware which affects the construction, operation, and physical security.
 255 Most of the data centres may impose special security requirements. Therefore, it is important that the
 256 planning of a data centre by the designer and the various engineering disciplines that will assist in the
 257 planning and implementation of the design of the data centre i.e. electrical, mechanical, security, etc. are
 258 carried out in cooperation with the IT and telecommunications personnel, network professionals, the facilities
 259 manager, the IT end users, and any other personnel involved.

260 Figure 2 shows an overview of the document:

261 • The organization provides the data centre strategy and resources for data centre management and
 262 operation.

263 • Data Centre management organizes all process and resources for data centre operation.

- 264 • Operational information and documentation support all data centre activities.

265

266

Figure 2 — Data centre management overview

267 The transition from planning and building to operation of a data centre is considered as part of the
 268 acceptance test process in 8.3.

269 This series of European Standards does not address the selection of information technology and network
 270 telecommunications equipment, software and associated configuration issues.

271 1 Scope

272 This document specifies processes for the management and operation of data centres. The primary focus of
273 this document is the processes necessary to deliver the expected level of resilience, availability, risk
274 management, risk mitigation, capacity planning, security and resource and energy efficiency.

275 The secondary focus is on organization and data centre management to align the actual and future
276 demands. Only processes specific for data centres are in the scope of this document.

277 Business processes like people management, financial management, etc. are out of scope.

278 2 Normative references

279 The following documents are referred to in the text in such a way that some or all of their content constitutes
280 requirements of this document. For dated references, only the edition cited applies. For undated references,
281 the latest edition of the referenced document (including any amendments) applies.

294 3 Terms, definitions and abbreviations

295 3.1 Terms and definitions

296 For the purposes of this document, the terms and definitions given in EN 50600-1, the EN 50600-2 series
297 and the following apply.

298 ISO and IEC maintain terminological databases for use in standardization at the following addresses:

299 — IEC Electropedia: available at <https://www.electropedia.org/>

300 — ISO Online browsing platform: available at <https://www.iso.org/obp>

301 3.1.1

302 **availability management**

303 process for monitoring, analysis, reporting and improvement of availability

304 3.1.2

305 **capacity management**

306 process for monitoring, analysis, reporting and improvement of capacity

- 307 **3.1.3**
308 **change management**
309 process for recording, coordination, approval and monitoring of all changes
- 310 **3.1.4**
311 **configuration item**
312 entity managed by configuration management
- 313 **3.1.5**
314 **configuration management**
315 process for logging and monitoring of configuration items
- 316 **3.1.6**
317 **cost distribution model**
318 model to distribute costs that cannot be directly related to an infrastructure item
- 319 **3.1.7**
320 **cost management**
321 process for monitoring, analysis and reporting of all infrastructure related costs
- 322 **3.1.8**
323 **customer management**
324 process for management of customers responsibilities
- 325 **3.1.9**
326 **data centre strategy**
327 process for alignment of actual data centre's capabilities and future demands of data centre's users and
328 owners
- 329 **3.1.10**
330 **energy management**
331 process for monitoring, analysis, reporting and improvement of energy efficiency
- 332 **3.1.11**
333 **event**
334 something that happens and leads to one or more failures or faults
- 335 [SOURCE: CLC/TS 50600-4-31:2024, 3.1.7]
- 336 **3.1.12**
337 **incident management**
338 process for responding to unplanned events and recovery of normal operation condition
- 339 **3.1.13**
340 **incident severity**
341 incident category according to the four impact categories described in EN 50600-1:2019, 5.3
- 342 **3.1.14**
343 **key performance indicator**
344 parameter used to evaluate performance
- 345 **3.1.15**
346 **operations management**
347 process for infrastructure maintenance, monitoring and event management
- 348 **3.1.16**
349 **product lifecycle management**
350 process for managing the timely renewal of infrastructure components and review of product lifecycle costs

prEN 50600-3-1:2024 (E)

- 351 **3.1.17**
 352 **provisioned capacity**
 353 capacity of the data centre's actual installed infrastructure
- 354 **3.1.18**
 355 **resilience**
 356 ability to withstand and reduce the magnitude and/or duration of disruptive events, including the capability to
 357 anticipate, absorb, adapt to, and/or rapidly recover from such an event
- 358 [SOURCE: IEEE Task Force on Definition and Quantification of Resilience, PES-TR65:2018-04]
- 359 **3.1.19**
 360 **resilience level**
 361 enumeration of attributes for the determination of *resilience* aspects of a defined service at a defined
 362 operation point (OP)
- 363 [SOURCE: CLC/TS 50600-4-31:2024, 3.1.26]
- 364 **3.1.20**
 365 **security incident**
 366 unplanned event resulting in an actual or potential breach of security
- 367 **3.1.21**
 368 **security management**
 369 process for design and monitoring of security policies, analysis, reporting and improvement of security
- 370 **3.1.22**
 371 **service level management**
 372 process for monitoring, analysis and reporting of service level compliance
- 373 **3.1.23**
 374 **service level agreement**
 375 agreement defining the content and quality of the service to be delivered and the timescale in which it is to
 376 be delivered
- 377 **3.1.24**
 378 **total capacity**
 379 maximum capacity the data centre was designed for at full use in terms of e.g. space, power and cooling
- 380 **3.1.25**
 381 **used capacity**
 382 data centre's current capacity used by the IT and facility in terms of e.g. space, power and cooling

383 3.2 Abbreviations

384 For the purposes of this document, the abbreviations given in EN 50600-1 and the following apply:

AHU	Air Handling Unit
BIM	Building Information Management
BMS	Building Management System
CAB	Change advisory board
