Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents) or the IEC list of patent declarations received (see <http://patents.iec.ch>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by ITU-T as ITU-T X.501 (10/2019) and drafted in accordance with its editorial rules. It was adopted by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 6, *Telecommunications and information exchange between systems*.

A list of all parts in the ISO/IEC 9594 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

18.8	Access Control Decision Function.....	106
18.9	Simplified Access Control.....	108
19	Rule-based Access Control.....	108
19.1	Scope and application.....	108
19.2	Rule-based Access Control model.....	108
19.3	Access control administrative areas.....	109
19.4	Security Label.....	109
19.5	Clearance.....	110
19.6	Access Control and Directory operations.....	111
19.7	Access Control Decision Function.....	111
19.8	Use of Rule-based and Basic Access Control.....	112
20	Data Integrity in Storage.....	112
20.1	Introduction.....	112
20.2	Protection of an Entry or Selected Attribute Types.....	112
20.3	Context for Protection of a Single Attribute Value.....	114
SECTION 9 – DSA MODELS.....		115
21	DSA Models.....	115
21.1	Definitions.....	115
21.2	Directory Functional Model.....	115
21.3	Directory Distribution Model.....	116
SECTION 10 – DSA INFORMATION MODEL.....		118
22	Knowledge.....	118
22.1	Definitions.....	118
22.2	Introduction.....	118
22.3	Knowledge References.....	119
22.4	Minimum Knowledge.....	121
22.5	First Level DSAs.....	121
22.6	Knowledge references to LDAP servers.....	122

23	Basic Elements of the DSA Information Model.....	122
	23.1 Definitions.....	122
	23.2 Introduction.....	122
	23.3 DSA Specific Entries and their Names.....	123
	23.4 Basic Elements.....	124
24	Representation of DSA Information.....	125
	24.1 Representation of Directory User and Operational Information.....	126
	24.2 Representation of Knowledge References.....	126
	24.3 Representation of Names and Naming Contexts.....	133
SECTION 11 – DSA OPERATIONAL FRAMEWORK.....		135
25	Overview.....	135
	25.1 Definitions.....	135
	25.2 Introduction.....	135
26	Operational bindings.....	135
	26.1 General.....	135
	26.2 Application of the operational framework.....	136
	26.3 States of cooperation.....	137
27	Operational binding specification and management.....	138
	27.1 Operational binding type specification.....	138
	27.2 Operational binding management.....	139
	27.3 Operational binding specification templates.....	139
28	Operations for operational binding management.....	141
	28.1 Application-context definition.....	141
	28.2 Establish Operational Binding operation.....	142
	28.3 Modify Operational Binding operation.....	145
	28.4 Terminate Operational Binding operation.....	147
	28.5 Operational Binding Error.....	148
	28.6 Operational Binding Management Bind and Unbind.....	149
SECTION 12 – INTERWORKING WITH LDAP.....		151
29	Overview.....	151
	29.1 Definitions.....	151
	29.2 Introduction.....	151
30	LDAP interworking model.....	151
	30.1 LDAP interworking scenarios.....	151
	30.2 Overview of bound DSA handling LDAP operations.....	152
	30.3 General LDAP requestor characteristics.....	152
	30.4 LDAP extension mechanisms.....	153
31	LDAP specific system schema.....	153
	31.1 Operational Attribute types from IETF RFC 4512.....	153
Annex A – Object identifier usage.....		156
Annex B – Information framework in ASN.1.....		159
Annex C – Subschema administration in ASN.1.....		170
Annex D – Service administration in ASN.1.....		175
Annex E – Basic Access Control in ASN.1.....		179
Annex F – DSA operational attribute types in ASN.1.....		183
Annex G – Operational binding management in ASN.1.....		186
Annex H – Enhanced security in ASN.1.....		191
Annex I – LDAP system schema.....		194
Annex J – The mathematics of trees.....		196
Annex K – Name design criteria.....		197

	<i>Page</i>
Annex L – Examples of various aspects of schema.....	199
L.1 Example of an attribute hierarchy	199
L.2 Example of a subtree specification.....	199
L.3 Schema specification.....	200
L.4 DIT content rules.....	201
L.5 DIT context use	202
Annex M – Overview of basic access control permissions.....	203
M.1 Introduction	203
M.2 Permissions required for operations	203
M.3 Permissions affecting error.....	204
M.4 Entry level permissions	204
M.5 Entry level permissions	205
Annex N – Examples of access control	206
N.1 Introduction	206
N.2 Design principles for Basic Access Control.....	206
N.3 Introduction to example	207
N.4 Policy affecting the definition of specific and inner areas	208
N.5 Policy affecting the definition of Directory Access Control Domains (DACDs)	209
N.6 Policy expressed in prescriptiveACI attributes	212
N.7 Policy expressed in subentryACI attributes	216
N.8 Policy expressed in entryACI attributes	217
N.9 ACDF examples	218
N.10 Rule-based access control	220
Annex O – DSE type combinations	221
Annex P – Modelling of knowledge	223
Annex Q – Subfilters	227
Annex R – Compound entry name patterns and their use.....	228
Annex S – Naming concepts and considerations	230
S.1 History tells us	230
S.2 A new look at name resolution.....	230
Annex T – Alphabetical index of definitions.....	236
Annex U – Amendments and corrigenda.....	238

Introduction

This Recommendation | International Standard, together with other Recommendations in the ITU-T X.500-series | parts of ISO/IEC 9594, has been produced to facilitate the interconnection of information processing systems to provide directory services. A set of such systems, together with the directory information that they hold, can be viewed as an integrated whole, called the *Directory*. The information held by the Directory, collectively known as the Directory Information Base (DIB), is typically used to facilitate communication between, with or about objects such as application entities, people, terminals and distribution lists.

The Directory plays a significant role in Open Systems Interconnection (OSI), whose aim is to allow, with a minimum of technical agreement outside of the interconnection standards themselves, the interconnection of information processing systems:

- from different manufacturers;
- under different managements;
- of different levels of complexity; and
- of different ages.

This Recommendation | International Standard provides a number of different models for the Directory as a framework for the other Recommendations in the ITU-T X.500 series | parts of ISO/IEC 9594. The models are the overall (functional) model; the administrative authority model, generic Directory Information Models providing Directory User and Administrative User views on Directory information, generic DSA and DSA information models, an Operational Framework and a security model.

The generic Directory Information Models describe, for example, how information about objects is grouped to form Directory entries for those objects and how that information provides names for objects.

The generic DSA and DSA information models and the Operational Framework provide support for Directory distribution.

This Recommendation | International Standard provides a specialization of the generic Directory Information Models to support Directory Schema administration.

This Recommendation | International Standard provides the foundation frameworks upon which industry profiles can be defined by other standards groups and industry forums. Many of the features defined as optional in these frameworks may be mandated for use in certain environments through profiles. This ninth edition technically revises and enhances the eighth edition of this Recommendation | International Standard.

Annex A, which is an integral part of this Recommendation | International Standard, summarizes the usage of ASN.1 object identifiers in the ITU-T X.500-series Recommendations | parts of ISO/IEC 9594.

Annex B, which is an integral part of this Recommendation | International Standard, provides the ASN.1 module which contains all of the definitions associated with the information framework.

Annex C, which is an integral part of this Recommendation | International Standard, provides the subschema administration schema in ASN.1.

Annex D, which is an integral part of this Recommendation | International Standard, provides the ASN.1 module for Service Administration.

Annex E, which is an integral part of this Recommendation | International Standard, provides the ASN.1 module for Basic Access Control.

Annex F, which is an integral part of this Recommendation | International Standard, provides the ASN.1 module which contains all the definitions associated with DSA operational attribute types.

Annex G, which is an integral part of this Recommendation | International Standard, provides the ASN.1 module which contains all the definitions associated with operational binding management operations.

Annex H, which is an integral part of this Recommendation | International Standard, provides the ASN.1 module which contains all the definitions associated with enhanced security.

Annex I, which is an integral part of this Recommendation | International Standard, provides the ASN.1 module which contains the definitions for LDAP system schema using the ASN.1 ATTRIBUTE information object.

Annex J, which is not an integral part of this Recommendation | International Standard, summarizes the mathematical terminology associated with tree structures.

Annex K, which is not an integral part of this Recommendation | International Standard, describes some criteria that can be considered in designing names.

Annex L, which is not an integral part of this Recommendation | International Standard, provides some examples of various aspects of Schema.

Annex M, which is not an integral part of this Recommendation | International Standard, provides an overview of the semantics associated with Basic Access Control permissions.

Annex N, which is not an integral part of this Recommendation | International Standard, provides an extended example of the use of Basic Access Control.

Annex O, which is not an integral part of this Recommendation | International Standard, describes some DSA specific entry combinations.

Annex P, which is not an integral part of this Recommendation | International Standard, provides a framework for the modelling of knowledge.

Annex Q, which is not an integral part of this Recommendation | International Standard, describes the concept of subfilters.

Annex R, which is not an integral part of this Recommendation | International Standard, describes recommendations and examples on how family members can be named.

Annex S, which is not an integral part of this Recommendation | International Standard, gives an introduction to naming concepts and considerations.

Annex T, which is not an integral part of this Recommendation | International Standard, lists alphabetically the terms defined in this Recommendation | International Standard.

Annex U, which is not an integral part of this Recommendation | International Standard, lists the amendments and defect reports that have been incorporated to form this edition of this Recommendation | International Standard.

**INTERNATIONAL STANDARD
ITU-T RECOMMENDATION**

**Information technology – Open Systems Interconnection –
The Directory: Models**

SECTION 1 – GENERAL

1 Scope

The models defined in this Recommendation | International Standard provide a conceptual and terminological framework for the other ITU-T X.500-series Recommendations | parts of ISO/IEC 9594 which define various aspects of the Directory.

The functional and administrative authority models define ways in which the Directory can be distributed, both functionally and administratively. Generic Directory System Agent (DSA) and DSA information models and an Operational Framework are also provided to support Directory distribution.

The generic Directory Information Models describe the logical structure of the Directory Information Base (DIB) from the perspective of Directory and Administrative Users. In these models, the fact that the Directory is distributed, rather than centralized, is not visible.

This Recommendation | International Standard provides a specialization of the generic Directory Information Models to support Directory Schema administration.

The other ITU-T Recommendations in the X.500 series | parts of ISO/IEC 9594 make use of the concepts defined in this Recommendation | International Standard to define specializations of the generic information and DSA models to provide specific information, DSA and operational models supporting particular directory capabilities (e.g., Replication):

- a) the service provided by the Directory is described (in Rec. ITU-T X.511 | ISO/IEC 9594-3) in terms of the concepts of the information framework; this allows the service provided to be somewhat independent of the physical distribution of the DIB;
- b) the distributed operation of the Directory is specified (in Rec. ITU-T X.518 | ISO/IEC 9594-4) so as to provide that service, and therefore maintain that logical information structure, given that the DIB is in fact highly distributed;
- c) replication capabilities offered by the component parts of the Directory to improve overall Directory performance are specified (in Rec. ITU-T X.525 | ISO/IEC 9594-9).

The security model establishes a framework for the specification of access control mechanisms. It provides a mechanism for identifying the access control scheme in effect in a particular portion of the Directory Information Tree (DIT), and it defines three flexible, specific access control schemes which are suitable for a wide variety of applications and styles of use. The security model also provides a framework for protecting the confidentiality and integrity of directory operations using mechanisms such as encryption and digital signatures. This makes use of the framework for authentication defined in Rec. ITU-T X.509 | ISO/IEC 9594-8 as well as generic upper layers security tools defined in Rec. ITU-T X.830 | ISO/IEC 11586-1.

DSA models establish a framework for the specification of the operation of the components of the Directory. Specifically:

- a) the Directory functional model describes how the Directory is manifested as a set of one or more components, each being a DSA;
- b) the Directory distribution model describes the principals according to which the DIB entries and entry-copies may be distributed among DSAs;
- c) the DSA information model describes the structure of the Directory user and operational information held in a DSA;
- d) the DSA operational framework describes the means by which the definition of specific forms of cooperation between DSAs to achieve particular objectives (e.g., shadowing) is structured.
