Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives or www.iec.ch/members_experts/refdocs).

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents and https://patents.iec.ch. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 42, *Artificial intelligence*.

A list of all parts in the ISO/IEC 5259 series can be found on the ISO and IEC websites.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

Introduction

Data are the raw material for analytics and machine learning (ML) and data quality is a critical aspect for related analytics and ML projects and systems. The aim of the ISO/IEC 5259 series is to provide tools and methods to assess and improve the quality of data used for analytics and ML.

Other parts of the ISO/IEC 5259 series include:

— ISO/IEC 5259-2[1)] provides a data quality model, data quality measures and guidance on reporting data quality in the context of analytics and ML. ISO/IEC 5259-2 builds on the ISO 8000 series, ISO/IEC 25012 and ISO/IEC 25024.

  The aim of ISO/IEC 5259-2 is to enable organizations to achieve their data quality objectives and is applicable to all types of organizations.

— ISO/IEC 5259-3 specifies requirements and provides guidance for establishing, implementing, maintaining and continually improving the quality for data used in the areas of analytics and ML.

  ISO/IEC 5259-3 does not define detailed processes, methods or measurement. Rather it defines the requirements and guidance for a quality management process along with a reference process and methods that can be tailored to meet the requirements in ISO/IEC 5259-3.

  The requirements and recommendations set out in ISO/IEC 5259-3 are generic and are intended to be applicable to all organizations, regardless of type, size or nature.

— ISO/IEC 5259-4 provides general common organizational approaches, regardless of type, size or nature of the applying organization, to ensure data quality for training and evaluation in analytics and ML. It includes guidelines on the data quality process for:

  — supervised ML with regard to the labelling of data used for training ML systems, including common organizational approaches for training data labelling;

  — unsupervised ML;

  — semi-supervised ML;

  — reinforcement learning;

  — analytics.

  ISO/IEC 5259-4 is applicable to training and evaluation data that come from different sources, including data acquisition and data composition, data pre-processing, data labelling, evaluation and data use. ISO/IEC 5259-4 does not define specific services, platforms or tools.

— ISO/IEC 5259-5[2)] provides a data quality governance framework for analytics and machine learning to enable the governing bodies of organization to direct and oversee the implementation and operation of data quality measures, management, and related processes with adequate controls throughout the DLC model according to ISO/IEC 5259-1.

— ISO/IEC TR 5259-6[3)] describes a visualization framework for data quality in analytics and ML. The aim is to enable stakeholders using visualization methods to access the results of data quality measures. This visualization framework supports data quality goals.

Artificial intelligence — Data quality for analytics and machine learning (ML) —

Part 1: Overview, terminology, and examples

1 Scope

This document provides the means for understanding and associating the individual documents of the ISO/IEC 5259 series and is the foundation for conceptual understanding of data quality for analytics and machine learning. It also discusses associated technologies and examples (e.g. use cases and usage scenarios).

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 22989, *Information technology — Artificial intelligence — Concepts and terminology*

ISO/IEC 23053, *Framework for Artificial Intelligence (AI) Systems Using Machine Learning (ML)*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 22989 and ISO/IEC 23053 and the following apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

— ISO Online browsing platform: available at https://www.iso.org/obp

— IEC Electropedia: available at https://www.electropedia.org/

3.1
data life cycle
life cycle of data
stages in the process of data usage from idea conception to its discontinuation

3.2
data originator
party that created the data and that can have rights

Note 1 to entry: A data originator can be an individual person.

Note 2 to entry: The data originator can be distinct from the natural or legal person(s) mentioned in, described by, or implicitly or explicitly associated with the data. For example, PII can be collected by a data originator that identifies other individuals. Those data subjects (PII Principals) can also have rights, in relation to the data set.

Note 3 to entry: Rights can include the right to publicity, right to display name, right to identity, right to prohibit data use in a way that offends honourable mention.

[SOURCE: ISO/IEC 23751:2022, 3.2]

3.3
data holder
party that has legal control to authorize data processing of the data by other parties

Note 1 to entry: A *data originator* (3.2) can be a data holder.

[SOURCE: ISO/IEC 23751:2022, 3.4]

3.4
data user
party that is authorized to perform processing of data under the legal control of a *data holder* (3.3)

[SOURCE: ISO/IEC 23751:2022, 3.5]

3.5
data quality
characteristic of data that the data meet the organization's data requirements for a specified context

3.6
data quality characteristic
category of data quality *attributes* (3.13) that has a bearing on *data quality* (3.5)

[SOURCE: ISO/IEC 25012:2008, 4.4, modified — Definition revised.]

3.7
data quality model
defined set of characteristics which provides a framework for specifying data *quality requirements* (3.9) and evaluating *data quality* (3.5)

[SOURCE: ISO/IEC 25012:2008, 4.6]

3.8
data quality measure
variable to which a value is assigned as the result of *measurement* (3.10) of a *data quality characteristic* (3.6)

[SOURCE: ISO/IEC 25012:2008, 4.5, modified — Note to entry removed.]

3.9
quality requirement
requirement for quality properties or *attributes* (3.13) of an information and communications technology (ICT) product, data or service that satisfy needs which ensue from the purpose for which that ICT product, data or service is to be used

[SOURCE: ISO/IEC 25030:2019, 3.15, modified — Note to entry removed.]

3.10
measurement
set of operations having the object of determining a value of a measure

[SOURCE: ISO/IEC 25024:2015, 4.27]

3.11
measurement scale
quantity-value scale
ordered set of quantity values of quantities of a given kind of quantity used in ranking, according to magnitude, quantities of that kind

EXAMPLE 1

Celsius temperature scale.

EXAMPLE 2

Time scale.
