

<sup>0</sup> Designation: E1665 – 95a (Reapproved 2012)

# Standard Classification for Serviceability of an Office Facility for Facility Protection<sup>1,2</sup>

This standard is issued under the fixed designation E1665; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\varepsilon$ ) indicates an editorial change since the last revision or reapproval.

#### 1. Scope

1.1 This classification covers pairs of scales for classifying an aspect of the serviceability of an office facility, that is, the capability of an office facility to meet certain possible requirements for protection of a building or site.

1.2 Within that aspect of serviceability, each pair of scales, shown in Figs. 2-7, are for classifying one topic of serviceability. Each paragraph in an Occupant Requirement Scale (see Figs. 2-7) summarizes one level of serviceability on that topic, which occupants might require. The matching entry in the Facility Rating Scale (see Figs. 2-7) is a translation of the requirement into a description of certain features of a facility which, taken in combination, indicate that the facility is likely to meet that level of required serviceability.

1.3 The entries in the Facility Rating Scale (see Figs. 2-7) are indicative and not comprehensive. They are for quick scanning to estimate approximately, quickly, and economically, how well an office facility is likely to meet the needs of one or another type of occupant group over time. The entries are not for measuring, knowing, or evaluating how an office facility is performing.

1.4 This classification can be used to estimate the level of serviceability of an existing facility. It can also be used to estimate the serviceability of a facility that has been planned but not yet built, such as one for which single-line drawings and outline specifications have been prepared.

1.5 This classification indicates what would cause a facility to be rated at a certain level of serviceability but does not state how to conduct a serviceability rating nor how to assign a serviceability score. That information is found in Practice E1334. The scales in this classification are complimentary to and compatible with Practice E1334. Each requires the other.

#### 3. Terminology

3.1 Definitions:

3.1.1 *facility*—a physical setting used to serve a specific purpose. **E631** 

3.1.1.1 *Discussion*—A facility may be within a building, a whole building, or a building with its site and surrounding environment; or it may be a construction that is not a building. The term encompasses both the physical object and its use.

3.1.2 *facility serviceability*—the capability of a facility to perform the function(s) for which it is designed, used, or required to be used. <u>37cf5fc7/astm-e1665-95a2012</u>

3.1.2.1 *Discussion*—The scope of this performance is of the facility as a system, including its subsystems, components and materials and their interactions, such as acoustical, hydrothermal, air purity, and economic; and of the relative importance of each performance requirement. **E631** 

3.1.3 *office*—a place, such as a room, suite, or building, in which business, clerical or professional activities are conducted.

3.1.4 For standard definitions of additional terms applicable to this classification, see Terminology E631.

3.2 Definitions of Terms Specific to This Standard:

<sup>&</sup>lt;sup>1</sup>This classification is under the jurisdiction of ASTM Committee E06 on Performance of Buildings and is the direct responsibility of Subcommittee E06.25 on Whole Buildings and Facilities.

Current edition approved April 1, 2012. Published May 2012. Originally approved in 1995. Last previous edition approved in 2005 as E1665 – 95a (2005). DOI: 10.1520/E1665-95AR12.

<sup>&</sup>lt;sup>2</sup> Portions of this document are based on material originally prepared by the International Centre for Facilities (ICF) and © 1993 by ICF and Minister of Public Works and Government Services Canada. Their cooperation in the development of this standard is acknowledged.

<sup>&</sup>lt;sup>3</sup> For referenced ASTM standards, visit the ASTM website, www.astm.org, or contact ASTM Customer Service at service@astm.org. For *Annual Book of ASTM Standards* volume information, refer to the standard's Document Summary page on the ASTM website.

<sup>&</sup>lt;sup>4</sup> The last approved version of this historical standard is referenced on www.astm.org.

<sup>&</sup>lt;sup>5</sup> Available from American National Standards Institute (ANSI), 25 W. 43rd St., 4th Floor, New York, NY 10036, http://www.ansi.org.

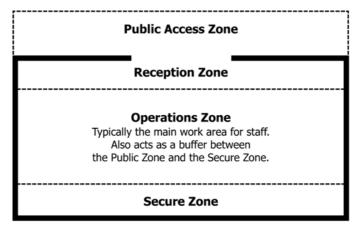

FIG. 1 Zones of Physical Security

3.2.1 *easement*—a right held by one person in the land of another, such as the right to cross one parcel of land to get to another parcel of land; or to use the land, as for installation and maintenance of public utilities. (See Fig. 1.)

3.2.2 security functions:

3.2.2.1 *detection*—devices and methods such as guards, alarms and access control, and monitoring systems designed to indicate, and possibly verify, attempted or actual unauthorized access.

3.2.2.2 *protection*—physical and psychological barriers that will delay or deter someone attempting unauthorized access.

3.2.2.3 *response*—reactions to attempted or actual unauthorized access, such as involvement of guard or police forces, damage assessments, and remedial measures to forestall a repetition of a security breach.

3.2.3 hours of operation:

3.2.3.1 *active hours*—the time when a facility is normally fully occupied and operational.

3.2.3.2 *normal working hours*—the time during the day when staff are normally at work, starting with the normal arrival in the morning of first staff and ending with the normal departure time of last staff. Excludes time of an evening or night shift, time when staff are working later than normal, weekends, and legal holidays.

3.2.3.3 *silent hours*—the period when a facility is essentially unoccupied, although security, cleaning, and building operations staff may be present.

3.2.3.4 *transitional hours*—the time in the morning after the first workers normally arrive until a facility is fully operational, and in the evening from the end of normal work until the normal workers have left, although security, cleaning, and building operations staff may be present.

3.2.4 zones of physical security:

3.2.4.1 *high-security zone*—an area that is continuously monitored and where access is limited to authorized personnel.

3.2.4.2 *occupant zone*—the occupant's premises, which includes all of the zones listed below. May be the same as the occupied area, if that does not include any public access zone.

3.2.4.3 *operations zone*—an area where access is limited to employees and to visitors with a legitimate reason for being there.

3.2.4.4 *public access zone*—that area to which the public has free access. Normally, these are the grounds of a facility, and the public corridors in multi-tenant buildings.

3.2.4.5 *reception zone*—an area to which the general public's access can be limited. Access could be limited to specific times of day or for specific reasons.

3.2.4.6 *secure zone*—an area that is continuously monitored and where access is controlled.

#### 4. Significance and Use

4.1 Each Facility Rating Scale (see Figs. 2-7) in this classification provides a means to estimate the level of service-ability of a building or facility for one topic of serviceability and to compare that level against the level of any other building or facility.

4.2 This classification can be used for comparing how well different buildings or facilities meet a particular requirement for serviceability. It is applicable despite differences such as location, structure, mechanical systems, age, and building shape.

4.3 This classification can be used to estimate the amount of variance of serviceability from target or from requirement, for a single office facility, or within a group of office facilities.

4.4 This classification can be used to estimate the following:

4.4.1 Serviceability of an existing facility for uses other than its present use.

4.4.2 Serviceability (potential) of a facility that has been planned but not yet built.

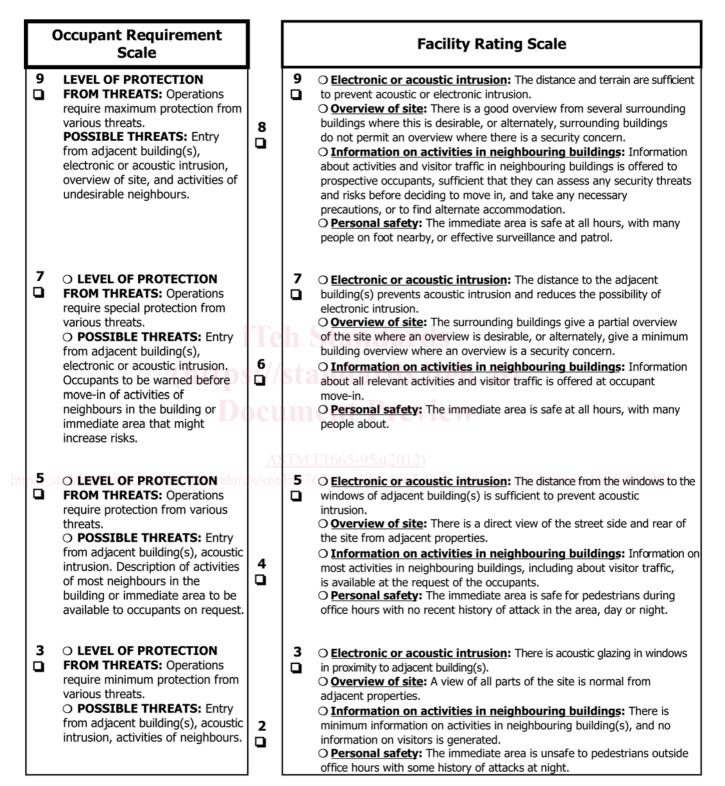

4.4.3 Serviceability (potential) of a facility for which remodeling has been planned.

4.5 Use of this classification does not result in building evaluation or diagnosis. Building evaluation or diagnosis generally requires a special expertise in building engineering or technology and the use of instruments, tools, or measurements.

4.6 This classification applies only to facilities that are building constructions, or parts thereof. (While this classification may be useful in rating the serviceability of facilities that are not building constructions, such facilities are outside the scope of this classification.)
