Foreword..... viii

Introduction..... ix

1 Scope..... 1

2 Normative references..... 1

3 Terms and definitions..... 2

4 General measurement requirements..... 6

4.1 General..... 6

4.2 Test ship parameters..... 6

4.3 Frequency range..... 7

4.4 CPA distance..... 7

4.5 Test site selection..... 7

4.6 Sea surface conditions..... 8

4.7 Acoustic measuring instrumentation..... 8

4.8 Distance measurement..... 11

4.9 Hydrophone deployment..... 12

5 Measurement configuration..... 13

5.1 Number of hydrophones..... 13

5.2 Hydrophone deployment configuration..... 13

5.3 Test course and ship operation..... 14

5.4 Number of runs..... 18

5.5 Background noise measurement..... 18

6 Data processing..... 18

6.1 General..... 18

6.2 Calculation of sound pressure levels..... 19

6.3 Background noise adjustments..... 19

6.4 Sensitivity adjustments..... 20

7 Source level calculation..... 21

7.1 Calculation of source level..... 21

7.2 Hydrophone and run combination post-processing..... 25

7.3 Calculation of radiated noise level..... 26

8 Measurement uncertainty..... 26

8.1 Overview..... 26

8.2 Uncertainty in measurement of source level..... 26

9 Reporting of results..... 28

9.1 Records required from vessel under test..... 28

9.2 Records required from fixed range or deploying vessel..... 30

9.3 Reporting results..... 30

Annex A (informative) Examples of deployment methods..... 34

Annex B (informative) Mitigation of platform and deployment related noise..... 39

Annex C (informative) Calculation of sound pressure level in decidecade bands..... 41

Annex D (informative) Propagation loss calculation (SSCI)..... 49

Annex E (informative) Non-standard additional source level calculation methods..... 57

7.2.3 Multiple runs 21

7.3 Calculation of radiated noise level 22

8 Measurement uncertainty 22

8.1 Overview 22

8.2 Uncertainty in measurement of source level 23

8.2.1 Combined uncertainty 23

8.2.2 Uncertainty in measurement of sound pressure levels 23

8.2.3 Uncertainty in the source level computation 24

8.2.4 Variability of the source 24

9 Reporting of results 24

9.1 Records required from vessel under test 24

9.2 Records required from fixed range or deploying vessel 26

9.3 Reporting results 26

9.3.1 Final source levels (for the specified source depth) in decidecade bands, per ship configuration, in tables and (optionally) graphs 26

Annex A (informative) Examples of deployment methods 28

A.1 Vessel based deployment 28

A.2 Static bottom tethered systems 28

A.3 Bottom tethered systems hard-cabled to shore 28

A.3.1.1.1 Surface vessel 29

A.3.1.1.2 Bottom tethered with surface float 29

A.3.1.1.3 Bottom tethered with acoustic release 30

A.3.1.1.4 Free floating array with data transmission buoy 30

A.3.1.1.5 Seabed tethered array 30

A.3.1.1.6 Bottom mounted transducer 31

Annex B (informative) Mitigation of platform and deployment related noise 32

B.1 General 32

B.2 Flow noise 32

B.3 Cable strum 32

B.4 Mechanical noise 33

B.5 Electrical noise 33

B.6 Biofouling 33

Annex C (informative) Calculation of sound pressure level in decidecade bands 34

C.1 Introduction 34

C.2 Check on data quality 34

Formatted: FooterPageRomanNumber

Formatted: Font: Bold, English (United Kingdom)

Formatted: Font: Bold

Formatted: HeaderCentered, Left

C.3 Data format assumptions.....35

C.4 Decidecade bands35

C.5 Calculation of decidecade band mean square sound pressure using the DFT.....35

C.5.1 Octave/Matlab source code.....38

C.5.2 Python source code.....38

C.6 Calculation of decidecade band SPL using alternative methods39

Annex D (informative) Propagation loss calculation (SSCI).....41

D.1 Introduction.....41

D.2 Implementation of the complex reflection coefficient formula41

D.3 Simplified reflection coefficient41

D.4 Seabed properties.....43

D.5 SSCI model verification.....43

Annex E (informative) Non-standard additional source level calculation methods47

E.1 Introduction.....47

E.2 Empirical conversion formula47

E.3 Semi-coherent formula48

E.3.1 General.....48

E.3.2 Method.....48

E.3.3 Test case.....49

E.4 Propagation loss calculation using a numerical model50

E.5 Quantifying the acoustic environment using a controlled sound source.....50

Annex F (informative) Evaluation of uncertainties52

F.1 Bandwidth-time product and uncertainty.....52

F.2 CPA distance to achieve a 10 s data window period52

F.3 Uncertainty due to background noise adjustment53

F.4 Example of uncertainty evaluation54

F.4.1 SATURN ship noise measurements54

F.4.2 Reproducibility of the SATURN SL measurements55

F.4.3 Numerical simulations of uncertainty for the SATURN measurement configurations55

Annex G (informative) Notes on records and example additional records that may be required by the trial authority.....60
