

Designation: D6040 – 12

Standard Guide to Standard Test Methods for Unsintered Polytetrafluoroethylene (PTFE) Extruded Film or Tape¹

This standard is issued under the fixed designation D6040; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope*

1.1 This guide identifies test methods to use in evaluating unsintered extruded films or tapes manufactured from polytetrafluoroethylene.

1.2 The values stated in SI units as detailed in [IEEE/ASTM SI 10](#), are to be regarded as standard.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

NOTE 1—This test method is equivalent to ISO 12086-2:2006 in the measurement of tensile properties, specific gravity, and dielectric constant. These are in ISO 12086-2:2006, sections 8.2.2, 10.6 and 8.1.1. It is not equivalent to ISO 12086-2:2006 in any other measurement or section.

1.4 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

3. Terminology

3.1 *Definitions:*

3.1.1 Definitions are in accordance with Test Methods [D257](#) and Terminologies [D883](#) and [D1711](#), unless otherwise specified.

3.1.2 *apparent density, n*—the weight per unit volume of a material including voids inherent in the material as tested, see Terminology [F412](#).

3.1.3 *lot, n*—one production run, or uniform blend of two or more production runs.

3.2 *Definitions of Terms Specific to This Standard:*

3.2.1 *film, n*—full-width material received as finished film.

3.2.2 *tape, n*—material that has been slit from the finished film.

3.2.3 *volume resistivity, n*—the volume resistance (in ohm-centimetres) between opposite faces of a material where the values are obtained by the measure of resistance to electrical current between electrodes placed in contact with the opposing surfaces of the sample (see Terminology [F335](#)).
