## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives) or [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)) or the IEC list of patent declarations received (see <https://patents.iec.ch>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html). In the IEC, see [www.iec.ch/understanding-standards](http://www.iec.ch/understanding-standards).

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 29, *Coding of audio, picture, multimedia and hypermedia information*.

A list of all parts in the ISO/IEC 23000 series can be found on the ISO and IEC websites.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html) and [www.iec.ch/national-committees](http://www.iec.ch/national-committees).

# Information technology — Multimedia application format (MPEG-A) —

## Part 22: Multi-image application format (MIAF)

### AMENDMENT 2: HEVC Advanced HDR profile and other clarifications

#### 3.3

Replace the definition with the following:

brand indicating that a MIAF file conforms to additional requirements that apply to all MIAF profiles and that MIAF readers and MIAF renderers that implement these requirements may process the MIAF file

#### Clause 3

Add the following new terms and definitions at the end of the clause:

##### 3.16

##### **CICP colour information**

metadata provided by a colour information box or property with `colour_type` equal to 'nclx'

##### 3.17

##### **ICC colour information**

metadata provided by a colour information box or property with `colour_type` equal to 'prof' or 'rICC'

#### Clause 5

Replace paragraphs two to six with the following:

Clause 7 specifies general requirements that apply to all MIAF profiles. These requirements are split in two ways:

- requirements at the file format structure level, and requirements at the 'abstraction layer' that the file format structures create; and
- requirements for both still images, image sequences and video.

Clause 8 specifies constraints which are shared by one or more MIAF profiles.

Clause 9 specifies the coding format(s) that must be supported in any player, independent of any MIAF profile.

Clause 10 specifies the MIAF application brands that indicate conformance to the normative requirements of this document, common to all MIAF profiles (as documented in the clauses preceding the annexes), and the applicable file extensions.

Annex A specifies the MIAF profiles, each of which imposes a set of specific restrictions which shall be followed for enabling interoperability between MIAF files and MIAF readers.

### 6.3

Replace the text with the following:

A MIAF image item is independently decodable and represented by an image item that conforms

- a) to the box-level requirements for image items in subclause 7.2.1; and
- b) to the requirements for image items in subclause 7.3; and
- c) to the requirements of a defined MIAF profile, if it exists, and for which a brand should appear in the FileTypeInfoBox.

### 6.4

Replace the text with the following:

A MIAF thumbnail image item is a MIAF image item that

- a) is referenced as a thumbnail image from a MIAF master image item;
- b) has its image data stored in the same file as the MIAF master image item for which it is a thumbnail.

### 6.5

Replace the text with the following:

A MIAF auxiliary image item is a MIAF image item that

- a) conforms also to the requirements for auxiliary image items in subclause 7.3.5;

### 6.6

Replace the first dashed item in the first dashed list with the following:

- a file compliant to this document

Replace the third dashed item in the "Outputs of a MIAF reader" dashed list with the following:

- the metadata associated with the output image(s), including the content of the ColourInformationProperty or ColourInformationBox box(es).

Designate the existing NOTE 3 as NOTE 4 and add the following new NOTE before it:

NOTE 3 All colour properties are expected to be parsed by MIAF readers, including all colour types (on-screen i.e. colour\_type equal to 'nclx', constrained and unconstrained ICC profiles), and passed as metadata to the MIAF renderer.
