Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html (standards.iteh.ai)

This document was prepared by Technical Committee ISO/TC 28, *Petroleum and related products, fuels and lubricants from natural or synthetic sources*.

Liquid petroleum products — Determination of hydrocarbon types — Fluorescent indicator adsorption method

AMENDMENT 1

Clause 2, Normative references

Replace the list of documents by the following undated and updated references:

ISO 756-1, *Propan-2-ol for industrial use — Methods of test — Part 1: General*

ISO 3171, *Petroleum liquids — Automatic pipeline sampling*

ASTM D3663, *Standard Test Method for Surface Area of Catalysts and Catalyst Carriers*

ASTM D4815, *Standard Test Method for Determination of MTBE, ETBE, TAME, DIPE, tertiary-Amyl Alcohol and C1 to C4 Alcohols in Gasoline by Gas Chromatography*

6.2

Add the following paragraph at the end of the subclause:

Early in 2018, a key component of the fluorescent indicator-dyed gel became unavailable. An alternative dye was substituted, but the reformulated dyed gel was later found to be unsuitable for the analysis of aviation turbine fuel, diesel fuel, and gasoline samples (spark-ignition engine fuels). In analysing any sample type by this document, users shall not report results obtained using any of the following lot numbers of fluorescent indicator-dyed gel: 3000000975, 3000000976, 3000000977, 3000000978, 3000000979, 3000000980, 3000000981, and 3000000982. Current production batches of the dyed gel have lot numbers starting with 3000000983.

Update the page footnote 2:

The sole source of supply of the standard dyed gel known at the time of publication of this document is produced by UOP LLC, and distributed by Advanced Specialty Gas Equipment Inc, 241 Lackland Drive, Middlesex, New Jersey 08846, by requesting "FIA Standard Dyed Gel". This information is given for the convenience of users of this document and does not constitute an endorsement by ISO of this product.
