

Standard Specification for Methane Thermophysical Property Tables¹

This standard is issued under the fixed designation D3956; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 The thermophysical property tables for methane are for use in the calculation of the pressure-volume-temperature (PVT), thermodynamic, and transport properties of methane for process design and operations. Tables Three tables are provided for gaseous and liquid methane at temperatures between 90 K and 600K at pressures to 20 MPa. One table provides properties at the conditions of 30 MPa. Two tables provide properties for the liquid and vapor phases at liquid-vapor equilibrium (saturation properties). The other third table provides properties at selected T,p points for the equilibrium phase at those conditions. The tables were developed by the National Institute of Standards and Technology from a Standard Reference Database product REFPROP, version 7.0.9.0.

2. Applicability

2.1 These tables apply directly only to pure gaseous methane. However, it is expected that they may find substantial use in mathematical models and tables for the thermophysical properties of mixtures containing methane.

3. Tables

3.1 *Thermophysical Properties of Coexisting Gaseous and Liquid Methane, Methane Liquid at Liquid-Vapor Equilibrium, in SI units.*

3.2 *Thermophysical Properties of Methane Vapor at Liquid-Vapor Equilibrium, in SI units.*

3.3 *Thermophysical Properties of Methane Along Isobars, in SI units.*

3.4 The tabulated properties are:

\bar{n}	= molar density ($\text{mol}\cdot\text{L}^{-1}$)	ASTM D3956-12
\bar{H}	= molar enthalpy ($\text{J}\cdot\text{mol}^{-1}$)	catalog/standards/sist/c46258b0-9611-4447-ac0d-f10774d87189/astm-d3956-12
S	= molar entropy ($\text{J}\cdot\text{K}^{-1}\cdot\text{mol}^{-1}$)	
C_v	= constant volume molar heat capacity ($\text{J}\cdot\text{K}^{-1}\cdot\text{mol}^{-1}$)	
C_p	= constant pressure molar heat capacity ($\text{J}\cdot\text{K}^{-1}\cdot\text{mol}^{-1}$)	
c	= speed of sound ($\text{m}\cdot\text{s}^{-1}$)	
	= viscosity ($\mu\text{Pa}\cdot\text{s}$)	
	= thermal conductivity ($\text{mW}\cdot\text{m}^{-1}\cdot\text{K}^{-1}$)	

3.5 These tables were produced by equations from a computer package, “NIST Standard Reference Database 23; Reference Fluid Thermodynamic and Transport Properties Database (REFPROP): Version 7.0.”² A wide selection of units (SI units, engineering units, chemical units) and additional properties are available with this program.²

4. Additional Information

4.1 Reference state properties are required to calculate certain of the thermodynamic properties (enthalpy, entropy, etc.) from an equation of state formulation. The reference state properties used to generate the tables in this specification are: enthalpy, H , and entropy, S , at 298.15 K and 0.101325 MPa ($H = 10018 \text{ J/mol}$ and $S = 186.266 \text{ J/(mol K)}$). The molar mass of methane is 16.043 g/mol.

¹ This specification is under the jurisdiction of ASTM Committee D03 on Gaseous Fuels and is the direct responsibility of Subcommittee D03.08 on Thermophysical Properties.

Current edition approved June 1, 2007 Nov. 1, 2012. Published July 2007 December 2012. Originally approved in 1982. Last previous edition approved in 2003 2007 as D3956-93 (2003) D3956-07. ¹-DOI: 10.1520/D3956-07.10.1520/D3956-12.

² Available from Standard Reference Data, National Institute of Standards and Technology (NIST), 100 Bureau Drive, Stop 3460, Gaithersburg, MD 20899.

5. Keywords

5.1 methane gas tables; natural gas; thermodynamic properties of methane; transport properties of methane
