

## **Standard Specification for Aluminum and Aluminum-Alloy Seamless Pipe and Seamless Extruded Tube<sup>1</sup>**

This standard is issued under the fixed designation B241/B241M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

*This standard has been approved for use by agencies of the Department of Defense.*

### **1. Scope\***

1.1 This specification<sup>2</sup> covers aluminum and aluminum-alloy seamless pipe in the alloys (Note 1) and tempers shown in **Table 1** [**Table 2**] and seamless extruded round tube in the alloys and tempers shown in **Table 3** [**Table 4**] intended for pressure applications. The standard sizes for seamless pipe are listed in Table 16.7 of ANSI H35.2 and H35.2M. Nonstandard alloys, tempers, and sizes of pipe are produced as seamless extruded tube.

NOTE 1—Throughout this specification, use of the term *alloy*, in the general sense, includes aluminum as well as aluminum alloy.

NOTE 2—For other seamless drawn tubes, see Specification **B210** or Specification **B483/B483M**. For extruded tube see Specification **B221**, and for structural pipe and tube see Specification **B429/B429M**.

1.2 Alloy and temper designations are in accordance with ANSI H35.1/H35.1M. The equivalent Unified Numbering System alloy designations are those of Table 5 preceded by A9, for example, A91100 for aluminum 1100 in accordance with Practice **E527**.

1.3 For acceptance criteria for inclusion of new aluminum and aluminum alloys in this specification, see **Annex A2**.

1.4 The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.

1.4.1 The SI units are shown either in brackets or in separate tables.

<sup>1</sup> This specification is under the jurisdiction of ASTM Committee **B07** on Light Metals and Alloys and is the direct responsibility of Subcommittee **B07.03** on Aluminum Alloy Wrought Products.

Current edition approved Nov. 1, 2012. Published December 2012. Originally approved in 1949. Last previous edition approved in 2010 as B241/B241M–10. DOI: 10.1520/B0241\_B0241M-12.

<sup>2</sup> For ASME Boiler and Pressure Vessel Code applications see related Specification SB-241/SB-241M in Section II of that Code.

	T6	All	42.0	37.0	10 <sup>G</sup>

<sup>A</sup> The basis for establishment of tensile property limits is shown in Annex A1.

<sup>B</sup> For purposes of determining conformance with this specification, each value for tensile strength and yield strength shall be rounded to the nearest 0.1 ksi, and each value for elongation shall be rounded to the nearest 0.5 %, both in accordance with the rounding-off method of Practice E29.

<sup>C</sup> Elongation of full-section and cut-out sheet-type specimens is measured in 2 in.; of round specimens, in 4 × specimen diameter.

<sup>D</sup> For wall thicknesses less than 0.250 in., the minimum elongation is 8 %.

<sup>E</sup> For wall thickness 0.050 to 0.259 in., the minimum elongation is 10 %.

<sup>F</sup> For wall thickness 0.260 to 0.500 in., the minimum elongation is 12 %.

<sup>G</sup> For wall thickness less than 0.125 in., the minimum elongation is 8 %.

	T6	All	290	255	10 <sup>G</sup>	9

<sup>A</sup> The basis for establishment of mechanical property limits is shown in Annex A1.

<sup>B</sup> For purposes of determining conformance with this specification, each value for ultimate strength and yield strength shall be rounded to the nearest 1 MPa, and each value for elongation shall be rounded to the nearest 0.5 %, both in accordance with the rounding-off method of Practice E29.

<sup>C</sup> Elongations in 50 mm apply for pipe tested in full-section and to sheet type specimens taken from pipes having a wall up to 12.50 mm thick. Elongations in 5D

$$(5.65 \sqrt{A}),$$

where D and A are diameter and cross-sectional area of the specimens respectively, apply to round test specimens machined from wall thicknesses over 6.30 mm.

<sup>D</sup> For wall thicknesses up through 6.30 mm the minimum elongation is 8 %.

<sup>E</sup> For wall thicknesses over 1.25 through 6.60 mm, the minimum elongation is 10 %.

<sup>F</sup> For wall thicknesses over 6.60 through 12.50 mm, the minimum elongation is 12 %.

<sup>G</sup> For wall thicknesses up through 3.20 mm the minimum elongation is 8 %.

<sup>A</sup>The basis for establishment of mechanical property limits is shown in Annex A1.<sup>B</sup>To determine conformance to this specification, each value for ultimate strength and for yield strength shall be rounded to the nearest 0.1 ksi and each value for elongation to the nearest 0.5 %, both in accordance with the rounding-off-method of Practice E29.<sup>C</sup>Elongation of full-section and cut-out sheet-type specimens is measured in 2 in.; of round specimens, in 4 × specimen diameter. See 9.1.1 for conditions under which measurements are not required.<sup>D</sup>Tests for tensile properties in the F temper are not required.<sup>E</sup>For stress relieved tempers (T3510, T3511, T4510, T4511, T5510, T5511, T6510, T6511, T73510, T73511, T8510, T8511), characteristics and properties other than those specified may differ somewhat from the corresponding characteristics and properties of material in the basic tempers.<sup>F</sup>Formerly designated T42 temper. When properly aged (precipitation heat-treated) 6063-T1 extruded products are designated T5.

<sup>A</sup>The basis for establishment of tensile property limits is shown in [Annex A1](#).

<sup>B</sup>To determine conformance to this specification, each value for tensile strength and yield strength shall be rounded to the nearest 1 MPa and each value for elongation to the nearest 0.5 %, both in accordance with the rounding-off method of Practice [E29](#).
