1	Scope	1
2	Normative references	1
3	Terms and definitions	1
3.1	Concepts and quantities: Hardware	2
3.1.1	Acoustic measuring systems: Concepts and components	2
3.1.2	Hydrophone characteristics	4
3.1.3	Analogue acquisition system characteristics	5
3.1.4	Sampling system characteristics	7
3.1.5	Acquisition system characteristics	12
3.1.6	Levels and other logarithmic quantities	14
3.2	Concepts and quantities: Data processing	18
3.2.1	Temporal windows	18
3.2.2	Discrete Fourier transform terms	19
3.2.3	Soundscape metrics	23
3.2.4	Data processing logarithmic quantities	24
3.3	Units	25
3.3.1	Units of logarithmic quantities	25
3.3.2	Units of time	26
4	Symbols and abbreviations	27
5	General objectives and outputs	32
6	Equipment	33
6.1	Specification of required equipment performance	33
6.1.1	Recommended minimum performance specification	33
6.1.2	Key performance characteristics	34
6.2	Calibration	38
6.2.1	Calibration requirements for instrumentation	38
6.2.2	Calibration requirements	38
6.2.3	Calibrations checks in situ	39
6.2.4	Calibration regimen	40
7	Deployment	40
7.1	Criteria	40
7.2	Sources and mitigation of parasitic signals	41
7.2.1	Flow noise	41
7.2.2	Cable strum	42
7.2.3	Mechanical noise	42
7.2.4	Biofouling	42
7.2.5	Protection from damage or loss	42
7.3	Recommended deployment options	43
7.3.1	Bottom-mounted recorders	43
7.3.2	Systems cabled back to shore	43
7.3.3	Recovery of measurement systems	44
8	Data processing and calculation of sound pressure	44
8.1	Initial data processing steps	44
8.1.1	Data format assumptions	44
8.1.2	Processing waveform data	44
8.2	Calculation of sound pressure waveform	45
9	Basic processing	46
9.1	Calculation of sound pressure level (and decidecade bands)	46

11.2.1	Calibration and system frequency range	56
11.2.2	Averaging time	57
11.2.3	Analysis windows	57
11.2.4	File formats and scaling factors	58
11.2.5	System-filtered quantities	58
11.3	General recommendations	58
11.3.1	Frequency bands	58
11.3.2	Statistics	58
11.3.3	Formatting	58
11.4	Study metadata	59
11.4.1	Equipment identification	59
11.4.2	Calibration and analysis parameters	59
11.4.3	Timestamps	59
11.4.4	Geospatial coordinates	59
11.4.5	Navigation track	60
11.4.6	Ocean meteorological data	60
11.5	Study outcomes	60
11.5.1	Discrete system-filtered sound pressure versus time	60
11.5.2	Decade sound pressure level	60
11.5.3	Sound pressure basic statistics	61
11.5.4	Millidecade or 1-Hz ('Narrowband') sound pressure level	61
11.5.5	Narrowband sound pressure spectral density level	61
11.5.6	Sound pressure level distribution	61
11.5.7	Sound pressure spectral probability density	61
11.6	Dataset stewardship	62
Annex A (informative)	Examples of deployment	64
A.1	Vessel-mounted systems	64
A.1.1	Surface vessels	64
A.1.2	Autonomous underwater gliders	64
A.2	Static bottom-tethered systems	64
A.3	Floating systems	65
A.4	Static systems cabled to shore	65
A.4.1.1.1.1	Surface vessel	66
A.4.1.1.1.2	Bottom-tethered with surface float	66
A.4.1.1.1.3	Bottom-tethered with acoustic release	66
A.4.1.1.1.4	Free floating array with data transmission buoy	66
A.4.1.1.1.5	Seabed-tethered array	66

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at [www.iso.org/patents](http://www.iso.org/patents). ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 43, *Acoustics*, Subcommittee SC 3, *Underwater acoustics*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).
