This document was prepared by Joint Technical Committee ISO/IEC JTC-1, *Information technology*, Subcommittee ~~SC40~~ SC 40, *IT Service Management* ~~service management~~ and *IT Governance* ~~governance~~.

A list of all parts in the ISO/IEC 20000 series can be found on the ISO ~~website~~ and IEC ~~websites~~.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committee. ~~www.iso.org/members.html and www.iec.ch/national-committees.~~

Introduction

This document provides guidance for organizations wishing to include ~~service integration~~Service Integration and ~~management~~Management (SIAM™) in an existing service management system (SMS), or one in the process of being established, based on ISO/IEC 20000-1:2018. An SMS supports the management of the service lifecycle, including the planning, design, transition, delivery and improvement of services, which meet agreed requirements and deliver value for customers, users and the organization(s) delivering the services.

The adoption of SIAM is driven by strategic factors, including:

- increased complexity of sourcing models using multiple service providers;
- a desire to remove reliance on any particular service provider;
- the requirement for effective controls for managing a multi-provider ecosystem;
- a desire for the ability and flexibility available from ~~specialised~~specialized service providers in this field.

SIAM is an evolution of service management methodologies that ~~include~~includes services integrated across multiple service providers. It has developed as organizations have moved away from outsourced contracts with a single service provider to an environment with multiple service providers. SIAM has evolved out of the challenges associated with these more complex operating models. SIAM addresses the issue of ~~'*accidental multi-sourcing'~~'sourcing', where an organization engages in an ad hoc way with multiple service providers and services over time, with no consistent overall control.

SIAM incorporates the concept of a service integrator layer, which is a single, logical entity held accountable for the end-to-end delivery of services. The service integrator layer is where end-to-end service management, assurance, integration and coordination are performed. It focuses on implementing an effective cross-service provider capability and executes the requirements directed by the customer organization.

This document also provides a mapping between ISO/IEC 20000-1 requirements and guidance to the elements in the SIAM methodology.

Information technology — Service management

Part 14: Guidance on the application of Service Integration and Management to ISO/IEC 20000-1

1 Scope

This document provides guidance for organizations that are establishing or improving a service management system (SMS) by incorporating a service integrator. ~~Incorporating~~The incorporation of a service integrator is aimed at addressing an environment that includes services sourced from multiple service providers.

This document specifically focuses on ~~service integration~~Service Integration and ~~management~~Management (SIAM)TM in the context of an SMS.

The intended users of this document include:

- organizations that need to manage multiple service providers within a new or existing SMS; and
- consultants and advisors that support an organization during SMS implementation or improvement, where a SIAM approach is being adopted.

This document is not applicable to organizations that have only one service provider.

NOTE In SIAM, the term "supplier" is not used. Internal and external suppliers are both referred to as "service providers". See 4.2See 4.2 for further comparison of terminology.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 20000-1, ISO/IEC 20000-10 and the following apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/><https://www.electropedia.org/>

3.1

cross-functional team

group of people with different functional expertise working toward a common goal

Note-1-to-entry:- It may include people from finance, marketing, operations and human resources departments. Typically, it includes employees from all levels of an organization or from different organizations.

ISO/IEC DTS 20000-14:(E)

[SOURCE: SIAM Professional Body of Knowledge, ~~2019~~2021]^[9]

3.2

function

organizational entity, typically characterized by a special area of knowledge or expertise [SOURCE: SIAM Professional Body of Knowledge, 2021]^[9]

~~[SOURCE: SIAM Professional Body of Knowledge, 2019]~~

3.3

organizational change management

OCM

process used to manage changes to business processes, organizational structures and cultures within an organization [SOURCE: SIAM Professional Body of Knowledge, 2021]^[9]

~~[SOURCE: SIAM Professional Body of Knowledge, 2019]~~

3.4

retained capabilities

functions within the customer organization that are responsible for strategic, architectural, business engagement and corporate governance activities

Note-1-to entry:-The customer organization will include some retained capabilities that may include any accountabilities and responsibilities that remain with the customer for legislative or regulatory reasons.

Note-2-to entry:-Some services may be delivered by the customer's staff. These staff are considered internal service providers and not part of the customer retained capabilities.

[SOURCE: SIAM Professional Body of Knowledge, ~~2019~~2021]^[9]

3.5

Service Integration and Management

SIAM

management methodology that can be applied in an environment that includes services sourced from multiple service providers [SOURCE: SIAM Professional Body of Knowledge, 2021]^[9]

~~[SOURCE: SIAM Professional Body of Knowledge, 2019]~~

3.6

service integrator

single, logical entity held accountable for the end-to-end delivery of services and the business value that the customer receives

Note-1-to entry:-Service integrator accountability includes end-to-end service governance, management, integration, assurance and coordination.

[SOURCE: SIAM Professional Body of Knowledge, ~~2019~~2021]^[9]

3.7

service provider

internal or external organization that provides services

Note-1-to entry:-Within a SIAM ecosystem, there are multiple service providers.

Note-2-to entry:-Service providers can also be known as suppliers or vendors.

[SOURCE: SIAM Professional Body of Knowledge, ~~2019~~2021]^[9]

3.8

SIAM ecosystem

network or interconnected system

Note_1_to_entry:-The SIAM ecosystem includes three layers: customer organization (including retained capabilities), service integrator and service provider(s).

[SOURCE: SIAM Professional Body of Knowledge, ~~2019~~2021]^[9]

3.9

SIAM governance

framework of rules, policies, processes, and in some cases legislation, by which businesses are operated, regulated and controlled

Note_1_to_entry:-In a SIAM ecosystem, governance refers to the definition and application of policies and standards. These define and ensure the required levels of authority, decision-making and accountability.

Note_2_to_entry:-ISO/IEC 38500 defines governance as “a system of directing, overseeing and accountability”.

[SOURCE: SIAM Professional Body of Knowledge, ~~2019~~2021, modified — Note 2 to entry added.]^[9]

3.10

SIAM model

customer organization-initiated structure consisting of practices, processes, functions, roles and structural elements described within the SIAM methodology and based on the layers in the SIAM ecosystem

[SOURCE: SIAM Professional Body of Knowledge, 2021]^[9]

[SOURCE: SIAM Professional Body of Knowledge, 2019]

3.11

SIAM practice

actual application or use of an idea, belief or method, as opposed to the theories relating to it

[SOURCE: SIAM Professional Body of Knowledge, 2021]^[9]

[SOURCE: SIAM Professional Body of Knowledge, 2019]

3.12

structural element

teams that have members from different organizations and different SIAM layers

Note_1_to_entry:-These include boards, process forums and working groups.

[SOURCE: SIAM Professional Body of Knowledge, ~~2019~~2021]^[9]

4 ISO/IEC 20000-1 and Service integration and management

4.1 Introduction to ISO/IEC 20000-1

ISO/IEC 20000-1 specifies requirements for establishing, implementing, maintaining and continually improving an SMS. An SMS supports the management of the service lifecycle, including the planning, design, transition, delivery and improvement of services, which meet agreed requirements and deliver value for customers, users and the organization delivering the services. The organization in the scope of the SMS can be a whole or part of a larger organization and can also be known as the service provider.

ISO/IEC 20000-1 is intentionally independent of specific guidance. The organization can use a combination of generally accepted methodologies (e.g. SIAM) and its own experience. Appropriate tools for service management can be used to support the SMS.

ISO/IEC DTS 20000-14:(E)

All requirements specified in ISO/IEC 20000-1 are generic and are intended to be applicable to all organizations, regardless of the organization's type or size, or the nature of the services delivered. While it can be used "regardless of the organization's type or size, or the nature of the services delivered, delivered." ISO/IEC 20000-1 has its roots in information technology (IT). It is intended for service management of services using technology and digital information. The examples given in this document illustrate a variety of uses of SIAM in the context of an SMS.

Exclusion of any of the requirements in ISO/IEC 20000-1:2018, Clauses 4 to 10, is not acceptable when the organization claims conformity to ISO/IEC 20000-1, irrespective of the nature of the organization.

The organization cannot demonstrate conformity to the requirements specified in ISO/IEC 20000-1 if it does not provide or operate at least some of the services, service components or processes within the scope of the SMS.

ISO/IEC 20000-10 includes the concepts for an SMS, the vocabulary used for the ISO/IEC 20000 series, and a description of each part of the series and related standards. Guidance is available in other parts of the ISO/IEC 20000 series including:

- ISO/IEC 20000-2: Guidance on the application of service management systems;
- ISO/IEC 20000-3: Guidance on scope definition and applicability of ISO/IEC 20000-1;
- ISO/IEC TS 20000-5: Implementation guidance for ISO/IEC 20000-1;
- ISO/IEC 20000-6: Requirements for bodies providing audit and certification of service management systems;
- ISO/IEC TS 20000-11: Guidance on the relationship between ISO/IEC 20000-1 and service management frameworks: ITIL®.

Figure 1 illustrates an SMS showing the clause content of ISO/IEC 20000-1. Numbers in parentheses in Figure 1 indicate ISO/IEC 20000-1 clause numbers. See Annex A for a list of the ISO/IEC 20000-1 clause number and titles.

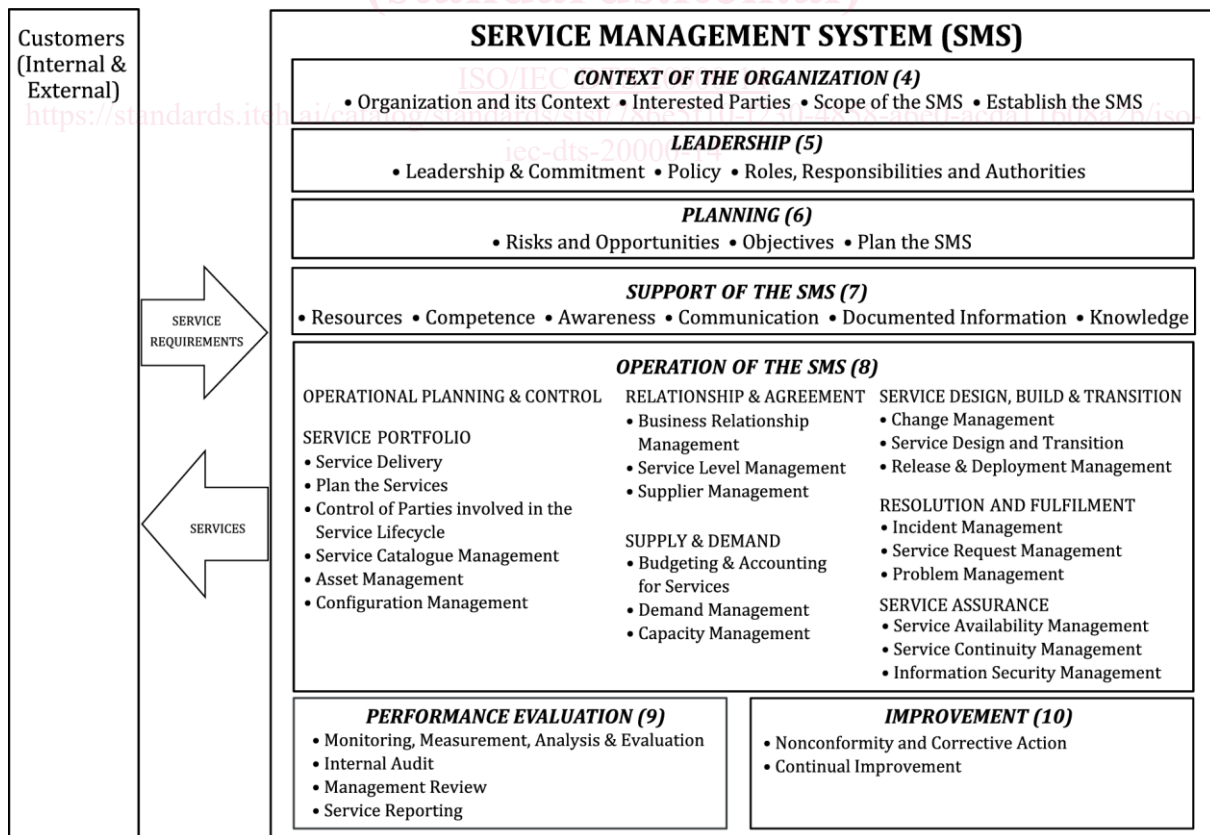

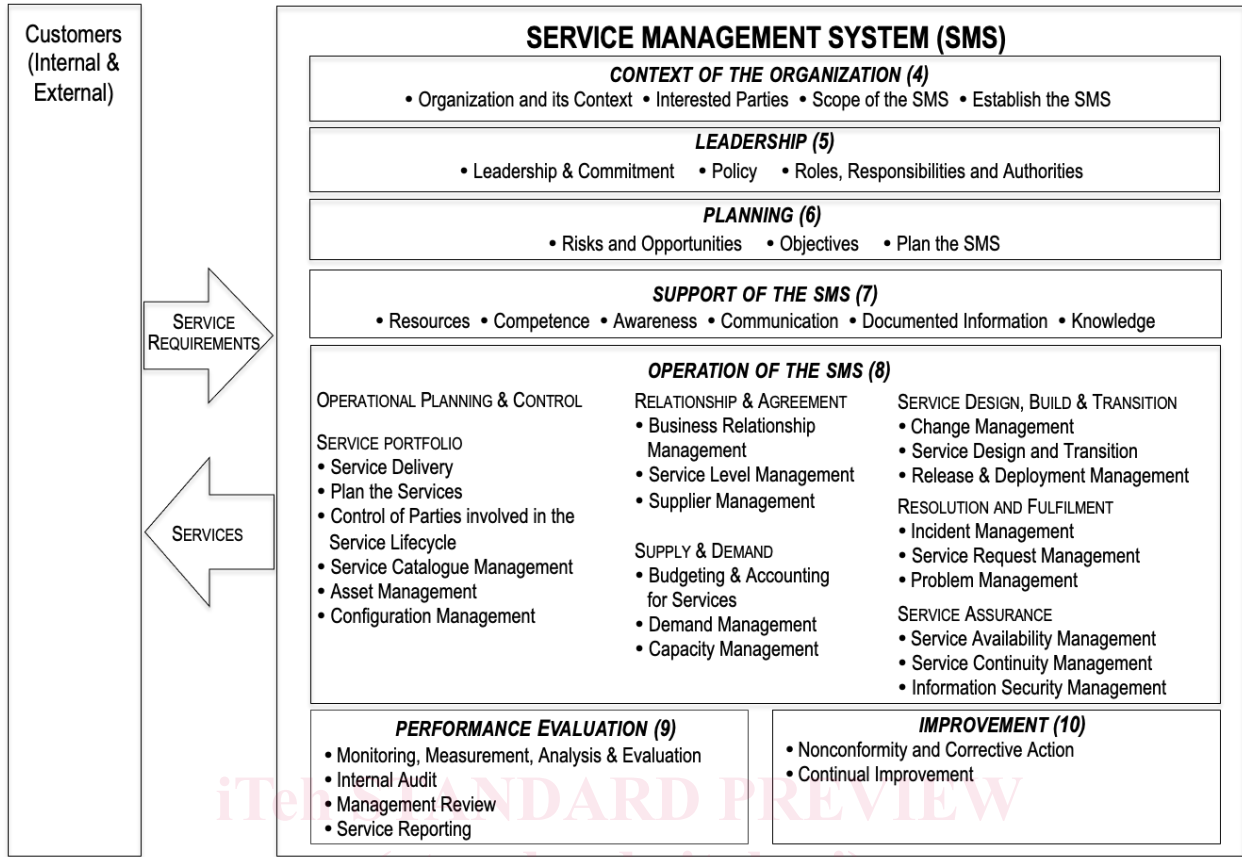

Figure 1 — Figure 1 — Service management system
