Contents

Foreword x
Introduction xi
1 Scope 1
2 Normative references 1
3 Terms, definitions, and abbreviated terms 2
3.1 Terms and definitions 2
3.1.1 General terms with specific meaning in this standard 2
3.1.2 Terms related to message exchanges and sequence diagrams 3
3.1.3 Other terms 5
3.2 Abbreviated terms 5
4 Structure of XSD data type and object definitions 6
4.1 General 6
4.2 Principles for XML descriptions in the ISO 28005 series 6
4.2.1 No use of XML attributes 6
4.2.2 Defaults for minOccurs and maxOccurs 6
4.2.3 Signalling empty XML tags 7
4.2.4 Order of child elements in XSD files 7
4.2.5 Character set 7
4.2.6 Principles for defining types with code lists 7
4.2.7 XSD name space for general XSD data types 7
4.2.8 ISO 28005 name space 7
4.3 Structure of clauses defining data types 8
4.3.1 Clause and data type name 8
4.3.2 Definition 8
4.3.3 Type defined as XSD code 8
4.3.4 Representation 8
4.4 Creating a valid XSD schema for a message part 8
4.5 Structure of resulting ISO 28005 XSD files 9
4.5.1 General structure 9
4.5.2 The message body definitions: iso28005-i.xsd 9
4.6 Location of XSD files 10
4.7 Reference to data types defined in ISO 28005-2 10
5 Adapted XSD data types for ISO 28005 11
5.1 Introduction 11
5.2 epc:anyURI Generalized URI 11
5.3 epc:boolean Boolean flag 11
5.4 epc:date General date 11
5.5 epc:dateTime Time and date, with time zone 12
5.6 epc:decimal Decimal number 12
5.7 epc:duration Time duration 13
5.8 epc:int Integer number 13
5.9 epc:string General string 13

Formatted: Normal, Centered, Space After: 24 pt, Tab stops: 17.2 cm, Right

Formatted: Justified, Space After: 30 pt, Line spacing: Exactly 11 pt

Formatted: Font: 11 pt

5.10	epc:token	Computer-understandable string	14
6		General ISO 28005 data types	14
6.1		General	14
6.2	epc:AuthenticatorType	The authenticator of information	14
6.3	epc:AuthorizationTokenType	Authorization token	14
6.4	epc:ContactInfoType	Contact information	15
6.5	epc:CommunicationNumberType	Communication number information	15
6.6	epc:CountryCodeContentType	Country identification	16
6.7	epc:GenderContentType	Enumeration type for Gender	16
6.8	epc:CrewDutyType	Duty onboard or on shore	16
6.9	epc:LocationType	Identification of a location	17
6.10	epc:NameType	Name of person	18
6.11	epc:OrganisationType	Description of an organization	18
6.12	epc:PostalAddressType	A postal mail address	19
6.13	epc:ShipIDType	Ship identity	19
6.14	epc:ReportingSystemType	Name of a reporting system	20
6.15	epc:AttachmentType	Reference to an attached document	21
6.16	epc:ReferenceCodeType	General reference code	21
6.17	epc:SystemIdType	Identity code for a software system	21
6.18	epc:SignatureCertificateIdType	Name of digital signature holder	22
6.19	epc:VersionType	Version code	22
7		ISO 28005 design principles	23
7.1		Harmonization with the IMO Reference Data Model	23
7.2		Fully automated machine to machine	23
7.3		Using carrier independent and internet-based protocols	23
7.4		The use of message sequence diagram	24
7.5		Sender and receiver versus client and server — asynchronous message transfers	24
7.6		Generalization of service	25
7.7		Different levels of sessions	26
7.7.1		Session context	26
7.7.2		Service session	26
7.7.3		HTTP session	27
7.8		One service per request and service session	27
7.9		Linking receivers to service providers	27
7.10		Service states	27
7.11		Use of request timeout	28
7.12		Send data once only	29
7.13		Message context	29
7.14		Message status	30
7.15		Message functions	30
7.16		General message structure	31
7.17		Digital signatures	32
7.18		Secure data transfer	32
7.19		Additional authorization for accessing API	32
7.20		Message implementation guide — MIG	32
7.21		Other formats than XML for the message body	33
7.22		No service discovery	33
8		Message exchange patterns	33
8.1		General rules	33
8.1.1		Application of this specification	33
8.1.2		Use of ShipStayReference	34

ISO/DIS_28005-1:2023(E2024(en))

8.1.3	Use of final flag in message header	34
8.1.4	Use of service timeout or session context end	34
8.1.5	Status and error codes	35
8.1.6	Multiple senders	36
8.1.7	Interleaving update requests with status messages	36
8.2	Sequence diagrams	36
8.2.1	Pattern 1: Service request and updates	36
8.2.2	Pattern 2: Status poll	37
8.2.3	Pattern 3: Request information	38
8.2.4	Pattern 4: Subscribe to service or information	38
9	Using HTTP multi-part message	39
9.1	General	39
9.2	An example of an ISO 28005-1 multi-part message	39
9.3	Content-Type: multipart/form-data	40
9.4	Prose text	40
9.5	Content-Type: application, image or other	41
9.6	Content-Encoding: gzip	41
9.7	Content-length	41
9.8	Content-Disposition: form-data; filename=file.name;	41
10	Definition of the message header structure	41
10.1	General	41
10.2	epc:MessageFunctionCodeContentType – Message function code	41
10.3	epc:ReplyInformationType – Type of sender response code	42
10.4	epc:MessageBodyFormatContentType – Format of body data	42
10.5	epc:ServiceTypeCodeContentType – Code for identification of service type	43
10.6	epc:ServiceCodeContentType – Code for identification of a service in a group	43
10.7	epc:StatusType – General message and request status and error codes	43
10.8	epc:SpecialAttachmentType – Description of special attachment	44
10.9	epc:MessageManifestType – Number of message parts	45
10.10	epc:EPCMessageHeaderType – Standard header for an EPC message	45
11	Definition of the message body structure	49
11.1	General	49
11.2	XML message body	49
11.2.1	epc:EPCMessageBodyType – the XML body data type	49
11.2.2	The XSD file	50
11.3	Encryption of selected content	50
11.4	UN/EDIFACT message body	50
11.5	JSON message body	50
12	Definition of attachment structure	51
12.1	General	51
12.2	Reference to an attached document in an XML body	51
13	Definition of the public key certificate structure	51
14	Definition of the digital signature structure	51
14.1	General requirements	51
14.2	Minimum requirements to signatories	52
14.3	epc:EPCMessageSignatureType – Digital signatures of message parts	52
15	General requirements related to the use of HTTP	52

Formatted: Font: 11.5 pt, Font color: Custom Color(RGB(33;29;30))

Formatted: Centered

Formatted: Font: 11.5 pt, Font color: Custom Color(RGB(33;29;30))

Formatted: Font: 11.5 pt, Font color: Custom Color(RGB(33;29;30))

Formatted: Normal, Centered, Space After: 24 pt, Tab stops: 17.2 cm, Right

Formatted: Justified, Space After: 30 pt, Line spacing: Exactly 11 pt

Formatted: Font: 11 pt

15.1	General system structure	52
15.2	Transmission protocol	53
15.3	Avoid use of HTTP redirect and similar mechanisms	53
15.4	Optional use of HTTP keep-alive	53
15.5	Transmission endpoint (URL)	53
15.6	HTTP methods	53
15.7	Different types of synchronous return values	54
15.7.1	Connection denied	54
15.7.2	Connection closed during transaction	54
15.7.3	HTTP error codes	54
15.7.4	Message status	54
15.7.5	Service request status	54
15.7.6	Service data	54
15.8	Authentication and integrity checks by server	55
16	API for symmetric HTTP communication	55
16.1	General	55
16.2	Message patterns to use	55
16.3	No authorization on the sender's URL	55
17	API access point for client polling via HTTPS communication	55
17.1	General	55
17.2	Message patterns to use	55
18	Authorization to access to API	55
18.1	General	55
18.2	The message pattern	55
18.3	opc:ServiceAuthorizationType – Type of service authorization	56
18.4	The message body	57
19	Requirements to message implementation guide (MIG)	57
19.1	General structure of MIG	57
19.2	MIG Introduction	57
19.3	Terms, definitions and abbreviations	57
19.4	High level description of use case	57
19.5	Prerequisites	57
19.6	Message sequence diagrams	58
	Annex A (normative) EPC Request Body	59
	Annex B (normative) Message implementation guide for Access Authorization	60
B.1	Introduction	60
B.2	Terms, definitions, and abbreviated terms	60
B.2.1	Terms and definitions	60
B.2.2	Abbreviations	60
B.3	High level description of use case	60
B.3.1	The general function	60
B.3.2	The parties	60
B.3.2.1	DRS – Declarant Reporting Server	60
B.3.2.2	AGR – Authorization Granting Receiver	60
B.3.3	General architecture	60

B.4	Prerequisites	61
B.4.1	Publication of AGR API and data requirements	61
B.4.2	No authorization on AGR API	61
B.4.3	Availability of digital signature certificates	61
B.4.4	Maintain authorization status through the session context	61
B.5	Message sequence diagrams	62
B.5.1	The message sequence patterns	62
B.5.2	The authorization requests	63
B.5.2.1	The message header	63
B.5.2.2	The message body and other message parts	63
B.5.3	The message status or authorization reply from AGR	63
B.5.3.1	The message header	63
B.5.3.2	The message body and other message parts	64
Annex C (normative) Message implementation guide for Maritime Single Window (MSW) and Mandatory Ship Reporting System (MRS)		65
C.1	Introduction	65
C.2	Terms, definitions, and abbreviated terms	65
C.2.1	Terms and definitions	65
C.2.2	Abbreviations	66
C.3	High level description of use case	66
C.3.1	The general function	66
C.3.2	The parties	66
C.3.2.1	DRS – Declarant Reporting Server	66
C.3.2.2	SRI – Ship Reporting Interface	66
C.3.3	General architecture	66
C.4	Prerequisites	67
C.4.1	Publication of SRI API and data requirements	67
C.4.2	Use of access authorization	67
C.4.3	Availability of digital signature certificates	68
C.4.4	Use of session context	68
C.4.5	No silent clearance	68
C.4.6	Several concurrent clearance requests	68
C.4.7	Send data once	68
C.4.8	Finalizing service sessions	68
C.4.9	Clearance through Port Community Systems	68

5.9.1	Definition	17
5.9.2	Type	17
5.9.3	Representation	17
5.10	epc:token – Computer-understandable string	17
5.10.1	Definition	17
5.10.2	Type	18
5.10.3	Representation	18
5.11	epc:xpath – Identification of an XML data item	18
5.11.1	Definition	18
5.11.2	Type	18
5.11.3	Representation	18
6	General ISO 28005 data types	18
6.1	General	18
6.2	epc:AuthenticatorType – Authenticator of information	18

Formatted: Font: 11.5 pt, Font color: Custom Color(RGB(33;29;30))

Formatted: Centered

Formatted: Font: 11.5 pt, Font color: Custom Color(RGB(33;29;30))

Formatted: Font: 11.5 pt, Font color: Custom Color(RGB(33;29;30))

Formatted: Normal, Centered, Space After: 24 pt, Tab stops: 17.2 cm, Right

6.2.1	Definition	18
6.2.2	Type	18
6.2.3	Representation	19
6.3	epc:AuthorizationTokenType – Authorization token	19
6.3.1	Definition	19
6.3.2	Type	19
6.3.3	Representation	19
6.4	epc:ContactInfoType – Contact information	19
6.4.1	Definition	19
6.4.2	Type	19
6.4.3	Representation	20
6.5	epc:CommunicationNumberType – Communication number information	20
6.5.1	Definition	20
6.5.2	Type	20
6.5.3	Representation	21
6.6	epc:CountryCodeContentType – Country identification	21
6.6.1	Definition	21
6.6.2	Type	21
6.6.3	Representation	21
6.7	epc:CountrySubdivisionCodeContentType – Country subdivision identification	22
6.7.1	Definition	22
6.7.2	Type	22
6.7.3	Representation	22
6.8	epc:CrewDutyType – Duty onboard or on shore	22
6.8.1	Definition	22
6.8.2	Type	22
6.8.3	Representation	22
6.9	epc:LocationType – Identification of a location	23
6.9.1	Definition	23
6.9.2	Type	23
6.9.3	Representation	24
6.10	epc:NameType – Name of person	25
6.10.1	Definition	25
6.10.2	Type	25
6.10.3	Representation	25
6.11	epc:OrganizationType – Description of an organization	26
6.11.1	Definition	26
6.11.2	Type	26
6.11.3	Representation	26
6.12	epc:PostalAddressType – A postal mail address	26
6.12.1	Definition	26
6.12.2	Type	26
6.12.3	Representation	27
6.13	epc:ShipIDType – Ship identity	27
6.13.1	Definition	27
6.13.2	Type	28
6.13.3	Representation	28
6.14	epc:ReportingSystemType – Name of a reporting system	28
6.14.1	Definition	28
6.14.2	Type	28
6.14.3	Representation	28
6.15	epc:AttachmentType – Reference to an attached document	29

8.1.1	Application of this specification	53
8.1.2	Use of reference codes	53
8.1.3	Use of final flag in message header	54
8.1.4	Use of service timeout or session context end	54
8.1.5	Status and error codes	54
8.1.6	Multiple senders	56
8.1.7	Interleaving update requests with status messages	57
8.2	Sequence diagrams	57
8.2.1	Pattern 1: Service request and updates	57
8.2.2	Pattern 2: Status poll	59
8.2.3	Pattern 3: Simple report	60
8.2.4	Pattern 4: Request information	61
8.2.5	Pattern 5: Subscribe to service or information	62
9	Using HTTP multi-part message	63
9.1	General	63
9.2	Example of an ISO 28005-1 multi-part message	63
9.3	Content-Type: multipart/form-data	65
9.4	Content-Encoding: gzip	66
9.5	Prose text	66
9.6	Content-Type: application, image or other	66
9.7	Content-Disposition: form-data; name = name; filename = file.name;	67
10	Definitions related to the message header part	67
10.1	General	67
10.2	epc:MessageFunctionCodeContentType – Message function code	67
10.2.1	Definition	67
10.2.2	Type	67
10.2.3	Representation	67
10.3	epc:ReplyInformationType – Type of sender response code	68
10.3.1	Definition	68
10.3.2	Type	68
10.3.3	Representation	68
10.4	epc:MessageBodyFormatContentType – Format of body data	68
10.4.1	Definition	68
10.4.2	Type	68
10.4.3	Representation	68
10.5	epc:ServiceTypeCodeContentType – Code for identification of service type	69
10.5.1	Definition	69
10.5.2	Type	69
10.5.3	Representation	69
10.6	epc:ServiceCodeContentType – Code for identification of a service in a group	69
10.6.1	Definition	69
10.6.2	Type	69
10.6.3	Representation	69
10.7	epc:StatusType – General message and service request status and error codes	70
10.7.1	Definition	70
10.7.2	Type	70
10.7.3	Representation	70
10.8	epc:SpecialAttachmentType – Description of special attachment	71
10.8.1	Definition	71
10.8.2	Type	71
10.8.3	Representation	71

10.9	epc:MessageManifestType - Number of message parts.....	72
10.9.1	Definition.....	72
10.9.2	Type.....	72
10.9.3	Representation.....	72
10.10	epc:EPCMessageHeaderType - Standard header for an EPC message.....	72
10.10.1	Definition.....	72
10.10.2	Type.....	72
10.10.3	Representation.....	75
11	Definitions related to the message body part.....	78
11.1	General.....	78
11.2	XML message body.....	78
11.2.1	epc:EPCMessageBodyType - the XML body data type.....	78
11.2.2	Structure of message body definition table.....	80
11.3	Encryption of selected content.....	80
11.4	UN/EDIFACT message body.....	80
11.5	UN/EDIFACT status message.....	81
11.6	JSON message body.....	81
12	Definitions related to attachment message parts.....	81
12.1	General.....	81
12.2	Reference to an attached document in an XML body.....	81
13	Definitions related to X.509 certificate message part.....	82
14	Definitions related to the digital signature message part.....	82
14.1	General.....	82
14.2	Signers.....	82
14.3	epc:EPCMessageSignatureType - Digital signatures of message parts.....	83
14.3.1	Definition.....	83
14.3.2	Type.....	83
14.3.3	Representation.....	83
15	General definitions related to the use of HTTP.....	84
15.1	Conceptual structure of a receiver.....	84
15.2	Conceptual structure of a sender.....	85
15.3	Transmission protocol.....	86
15.4	Avoid use of HTTP redirect and similar mechanisms.....	86
15.5	Optional use of HTTP keep-alive.....	86
15.6	API access point URL.....	86
15.7	HTTP methods.....	86
15.8	Different types of synchronous return values.....	87
15.8.1	General.....	87
15.8.2	Connection error.....	87
15.8.3	HTTP error codes.....	88
15.8.4	Message status.....	88
15.8.5	Service request status.....	88
16	API access points for asynchronous HTTP communication.....	88
16.1	General.....	88
16.2	Message patterns to use.....	88
16.3	No authorization on the sender's URL.....	88
17	API access point for synchronous HTTP communication.....	89

ISO/DIS 28005-1:2023(E)

17.1	General	89
17.2	Message patterns to use	89
18	Authorization to access API access point	89
18.1	General	89
18.2	The message pattern	89
18.3	epc:ServiceAuthorizationType – Type of service authorization	91
18.3.1	Definition	91
18.3.2	Type	91
18.3.3	Representation	92
18.4	The message body	92
19	Specifications for the message implementation guide (MIG)	92
19.1	General structure of MIG	92
19.2	MIG Introduction	92
19.3	High level description of use case	92
19.4	Prerequisites	93
19.5	Message sequence diagrams	93
Annex A (normative)	EPC request body	95
Annex B (informative)	Message implementation guide for access authorization	96
Annex C (informative)	Message implementation guide for maritime single window and mandatory ship reporting system	103
Annex D (normative)	Code list for special attachments	111
Annex E (normative)	Message function codes for XML messages	112
Annex F (normative)	Message and service request status codes	114
Annex G (normative)	Service codes	116
Annex H (normative)	Software system type codes	121
Annex I (normative)	Code list for authenticator and contact point roles	122
Annex J (normative)	Codes for digital signatures	123
Annex K (informative)	IMO FAL mapping	124
