## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at [www.iso.org/patents](http://www.iso.org/patents). ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 289, *Brand evaluation*, in collaboration with Technical Committee ISO/TC 228, *Tourism and related services*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

## Introduction

### 0.1 General

A brand identifies an entity's goods, services or the entity itself as distinct from what is offered by another entity. A brand can thus be connected to an entity, a product or service, lines or portfolios of products, a city, a region, etc.

The function of tourism city brand is to establish a distinctive identity for the entity and the products or services. Through brand building, tourist cities can create a distinctive image to attract tourists and establish emotional resonance with tourists by transmitting brand value propositions. Increasingly, brands also seek identification with experiences that relate to the tourism city through its products, services or other operations. These experiences go beyond the mere usage of the product or service and lead to a higher-level engagement with them, which can build brand image in the consciousness of stakeholders gradually.

Tourism city brand is not only valuable to its holders, but also to other stakeholders. The primary purposes of tourism city brand are to increase the total business value of the brand-using entity, reduce risk, and extend the sustainable existence of the brand-owning entity. In practice, strong tourism city brands attract customers and add revenue through either increased price or volume premiums, or both, including repeat purchase loyalty. More broadly, it is also the case that brands can reduce costs and create a competitive advantage in the minds of stakeholders. A brand thus has an impact on revenue and profitability and can influence brand value.

### 0.2 Tourism city brand evaluation

Tourism city brand evaluation refers to the evaluation of the value of tourism city brand. Tourism city brand evaluation is defined from the perspective of stakeholders, reflecting the value that a brand holds for stakeholders in deciding whether to purchase or accept a certain product or service. In other words, the tourism city brand evaluation activity determines to what extent the brand contributed to the attractiveness of the tourism city.

The steps and reporting process of tourism city brand evaluation are referred to ISO 20671-2.

### 0.3 Tourism city brand strength

Brand strength is the extent to which a brand is positive or negative in its potential to affect customers and other stakeholders. This document uses brand strength to reflect the results of tourism city brand evaluation. This document also details possible indicators of each dimension for assessing brand strength.

### 0.4 Continuous improvement

Brand evaluation is complex and multi-dimensional, and the degree of improvement in brand strength can be reflected through continuous evaluation of brand input factors, output dimensions and their relationship. The brand evaluation of tourism city thus creates a feedback loop for the continuous improvement of a brand that leads to greater value for the entity over time. Tourism city brand entities can conduct brand management and brand evaluation at least once a year to enhance the brand attraction. By investing (changing the composition and level of brand input elements) based on such feedback, brands can be improved to provide greater benefits and better experiences to customers and other stakeholders and higher returns on the brand asset to the entities which use and own the brand.
