

ISO/FDIS 11784:2024(E)

Third edition

ISO/TC-23/SC-19/WG-3

Secretariat: DIN

Date: 2024-05-0528

Radio-frequency identification of animals — Code structure

Identification des animaux par radiofréquence — Structure du code

ISO/FDIS 11784

<https://www.iso.org/standards/iso/4930b3a5-b282-4005-a6e1-71525b23730c/iso-fdis-11784>

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had ~~not~~ received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 19, *Agricultural electronics*.

This third edition cancels and replaces the second edition (ISO 11784:1996), which have been technically revised. It also incorporates the Amendments ISO 11784:1996/Amd. 1:2004 and ISO 11784:1996/Amd. 2:2010.

The main changes are as follows:

- references to ISO 24631-1⁽⁷⁾ has been included to specify the granting and the use of the manufacturer's numbers;
- the following new annexes have been added:
 - Conditions for using ISO 11784 coding (Annex A);
 - Conditions of use of transponder registration (Annex B);
 - Conditions of use of manufacturer codes (Annex C);
 - Steps RA shall take if rules as defined in this document are disrespected (Annex D);
- information related to the Registration Authority for (shared) manufacturer codes has been added.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

ISO/FDIS 11784

<https://standards.itih.ai/catalog/standards/iso/4930b3a5-b282-4005-a6e1-71525b23730c/iso-fdis-11784>

Introduction

This document specifies the structure of the radio-frequency (RF) identification code for animals. RF identification of animals requires that the bits transmitted by a transponder are interpretable by a transceiver.

Usually, the bit stream contains data bits, defining the identification code and a number of bits to ensure correct reception of the data bits. This document specifies the structure of the identification code.

The transmission protocols between transponder and transceiver are the subject of ISO 11785^{[2],[1]}.

This document does not specify the characteristics for advanced transponders. These characteristics are the subject of the ISO 14223 series^{[3],[4],[5],[2],[3],[4]}.

This document does not specify the characteristics of the injection sites for injectable transponders. These characteristics are the subject of ISO 15639^{[6],[5]}.

This document does not specify the characteristics of the evaluation protocols (including granting and use of a manufacturer code). These characteristics are the subject of the ISO 24631 series^{[7],[8],[9],[6],[7]}.
