

Designation: **A36/A36M—08 A36/A36M – 12**

## Standard Specification for Carbon Structural Steel<sup>1</sup>

This standard is issued under the fixed designation A36/A36M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reapproval.

*This standard has been approved for use by agencies of the Department of Defense.*

### 1. Scope\*

1.1 This specification<sup>2</sup> covers carbon steel shapes, plates, and bars of structural quality for use in riveted, bolted, or welded construction of bridges and buildings, and for general structural purposes.

1.2 Supplementary requirements are provided for use where additional testing or additional restrictions are required by the purchaser. Such requirements apply only when specified in the purchase order.

1.3 When the steel is to be welded, a welding procedure suitable for the grade of steel and intended use or service is to be utilized. See Appendix X3 of Specification **A6/A6M** for information on weldability.

1.4 The values stated in either inch-pound units or SI units are to be regarded separately as standard. Within the text, the SI units are shown in brackets. The values stated in each system are not exact equivalents; therefore, each system is to be used independently of the other, without combining values in any way.

1.5 The text of this specification contains notes or footnotes, or both, that provide explanatory material. Such notes and footnotes, excluding those in tables and figures, do not contain any mandatory requirements.

1.6 For structural products produced from coil and furnished without heat treatment or with stress relieving only, the additional requirements, including additional testing requirements and the reporting of additional test results, of **A6/A6M** apply.

\*A Summary of Changes section appears at the end of this standard

**TABLE 1 Appurtenant Material Specifications**

NOTE 1—The specifier should be satisfied of the suitability of these materials for the intended application. Chemical composition or mechanical properties, or both, may be different than specified in A36/A36M.

| Material                    | ASTM Designation  |
|-----------------------------|---|
| Steel rivets                | A502, Grade 1   |
| Bolts                       | A307, Grade A or F568M, Class 4.6   |
| High-strength bolts         | A325 or A325M   |
| Steel nuts                  | A563 or A563M   |
| Cast steel                  | A27/A27M, Grade 65–35 [450–240]   |
| Forgings (carbon steel)     | A668/A668M, Class D   |
| Hot-rolled sheets and strip | A1011/A1011M, SS Grade 36 [250] Type 1 or Type 2 or A1018/A1018M, SS Grade 36 [250] |
| Cold-formed tubing          | A500, Grade B   |
| Hot-formed tubing           | A501  |
| Anchor bolts                | F1554, Grade 36   |

### 3. Appurtenant Materials

3.1 When components of a steel structure are identified with this ASTM designation but the product form is not listed in the scope of this specification, the material shall conform to one of the standards listed in Table 1 unless otherwise specified by the purchaser.

### 4. General Requirements for Delivery

4.1 Structural products furnished under this specification shall conform to the requirements of the current edition of Specification A6/A6M, for the specific structural product ordered, unless a conflict exists in which case this specification shall prevail.

4.2 Coils are excluded from qualification to this specification until they are processed into a finished structural product. Structural products produced from coil means structural products that have been cut to individual lengths from a coil. The processor directly controls, or is responsible for, the operations involved in the processing of a coil into a finished structural product. Such operations include decoiling, leveling or straightening, hot-forming or cold-forming (if applicable), cutting to length, testing, inspection, conditioning, heat treatment (if applicable), packaging, marking, loading for shipment, and certification.

NOTE 1—For structural products produced from coil and furnished without heat treatment or with stress relieving only, two test results are to be reported for each qualifying coil. Additional requirements regarding structural products produced from coil are described in Specification A6/A6M.

### 5. Bearing Plates [ds.iteh.ai/catalog/standards/sist/b33093f1-0df0-4131-9ef8-2f4663849e2c/astm-a36-a36m-12](https://www.astm.org/standards/sist/b33093f1-0df0-4131-9ef8-2f4663849e2c/astm-a36-a36m-12)

5.1 Unless otherwise specified, plates used as bearing plates for bridges shall be subjected to mechanical tests and shall conform to the tensile requirements of Section 8.

5.2 Unless otherwise specified, mechanical tests shall not be required for plates over 1½ in. [40 mm] in thickness used as bearing plates in structures other than bridges, subject to the requirement that they shall contain 0.20 to 0.33 % carbon by heat analysis, that the chemical composition shall conform to the requirements of Table 3 in phosphorus and sulfur content, and that a

**TABLE 2 Tensile Requirements<sup>A</sup>**

|  |                       |
|--|-----------------------|
| Plates, Shapes, <sup>B</sup> and Bars: |                       |
| Tensile strength, ksi [MPa]            | 58–80 [400–550]       |
| Yield point, min, ksi [MPa]            | 36 [250] <sup>C</sup> |
| Plates and Bars: <sup>D,E</sup>        |                       |
| Elongation in 8 in. [200 mm], min, %   | 20                    |
| Elongation in 2 in. [50 mm], min, %    | 23                    |
| Shapes:                                |                       |
| Elongation in 8 in. [200 mm], min, %   | 20                    |
| Elongation in 2 in. [50 mm], min, %    | 21 <sup>B</sup>       |

<sup>A</sup> See the Orientation subsection in the Tension Tests section of Specification A6/A6M.

<sup>B</sup> For wide flange shapes with flange thickness over 3 in. [75 mm], the 80 ksi [550 MPa] maximum tensile strength does not apply and a minimum elongation in 2 in. [50 mm] of 19 % applies.

<sup>C</sup> Yield point 32 ksi [220 MPa] for plates over 8 in. [200 mm] in thickness.

<sup>D</sup> Elongation not required to be determined for floor plate.

<sup>E</sup> For plates wider than 24 in. [600 mm], the elongation requirement is reduced two percentage points. See the Elongation Requirement Adjustments subsection under the Tension Tests section of Specification A6/A6M.
