Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives or www.iec.ch/members_experts/refdocs).

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 29, *Coding of audio, picture, multimedia and hypermedia information*. <https://standards.iteh.ai>

This second edition cancels and replaces the first edition (ISO/IEC 23093-4:2020), which has been technically revised.

The main changes are as follows:

- modification of introduction;
- addition of new APIs;
- addition of binary reference software and its conformance streams.

A list of all parts in the ISO/IEC 23093 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

Introduction

The ISO/IEC 23093 series provides an architecture and specifies APIs and compressed representation of data flowing between media things.

The APIs for the media things facilitate discovering other media things in the network, connecting, and efficiently exchanging data between media things. The APIs also support transaction tokens to access valuable functionalities, resources, and data from media things.

Information related to media things consists of characteristics and discovery data, setup information from a system designer, raw and processed sensed data, and actuation information. The ISO/IEC 23093 series specifies input and output data formats for media things such as media sensors, actuators, storage, and analysers. In addition, media analysers can process sensed data from media sensors to produce analysed data, and the media analysers can be cascaded to extract semantic information.

This document contains the conformance and reference software implementing ISO/IEC 23093-3, which includes the tools to describe data exchanged between media things and their APIs.

Information technology — Internet of media things —

Part 4: Reference software and conformance

1 Scope

This document specifies the conformance and reference software implementing ISO/IEC 23093-3. The information provided is applicable for determining the reference software modules available for ISO/IEC 23093-3, understanding the functionality of the available reference software modules, and utilising the available reference software modules.

Furthermore, this document provides means for conformance testing, i.e. bitstreams – XML and binary descriptions – that conform or do not conform to ISO/IEC 23093-3.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 23093-1, *Information technology — Internet of media things — Part 1: Architecture*

ISO/IEC 23093-2, *Information technology — Internet of media things — Part 2: Discovery and communication API*

ISO/IEC 23093-3, *Information technology — Internet of media things — Part 3: Media data formats and APIs*

<https://standards.iteh.ai/catalog/standards/sist/21f52f77-ecf6-4aea-b3af-1ff2d75a34db/iso-iec-23093-4>

3 Terms, definitions, and abbreviated terms

3.1 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 23093-1, ISO/IEC 23093-2, and ISO/IEC 23093-3 apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

3.2 Abbreviated terms

API	application programming interface
MACV	media actuator command vocabulary
MAOV	media analyser output vocabulary
MSOV	media sensor output vocabulary
MTDL	media thing description language

4 Reference software for ISO/IEC 23093-3

4.1 General

This clause specifies the reference software for ISO/IEC 23093-3. The software is available at <https://standards.iso.org/iso-iec/23093/-4/ed-2/en>. The reference software is written in Java®¹⁾ and adopts the package structure in [Table 1](#).

Table 1 — The package structure of the IoMT reference software

Name	Definition
org	Java package name for reference software provided by organisations such as ISO/IEC, W3C, or similar.
org.iso	Java package name for reference software provided by ISO/IEC.
org.iso.mpeg	Java package name for reference software.
org.iso.mpeg.iomt	Java package name for reference software developing the ISO/IEC 23093 series. - org.iso.mpeg.iomt.mtdl, org.iso.mpeg.iomt.msov, org.iso.mpeg.iomt.macv, and org.iso.mpeg.iomt.maov for ISO/IEC 23093-3. NOTE Code included within these packages can automatically generate tools such as JAXB (Java Architecture for XML Binding) ^[4] .

4.2 ISO/IEC 23093-3 APIs for MTDL

4.2.1 General

This subclause specifies the API to the ISO/IEC 23093-3 reference software. The API is defined in Java® and adopts the package structures in [Table 2](#).

Table 2 — MTDL reference software package structures

Name	Definition
org.iso.mpeg.iomt.mtdl	Java package name for API to the ISO/IEC 23093-3 reference software.

4.2.2 APIs for MThing

This subclause specifies classes related to the basic information of an MThing ([Table 3](#)).

Table 3 — Class types of MThing

Name	Definition
MThingInfo	Java class containing essential elements and attributes for an MThing.
MSensorType	Java class (i.e. superclass) that all media sensors shall extend.
MActuatorType	Java class (i.e. superclass) that all media actuators shall extend.
MAnalyserType	Java class (i.e. superclass) that all media analysers shall extend.
MStorageType	Java class (i.e. superclass) that all media storage shall extend.
MManagerType	Java class (i.e. superclass) that all MThing managers shall extend.
MAggregatorType	Java class (i.e. superclass) that all MThing aggregators shall extend.

1) Java® is the trademark of a product supplied by Oracle®. This information is given for the convenience of users of this document and does not constitute an endorsement by ISO or IEC of the product named. Equivalent products may be used if they can be shown to lead to the same results.

4.2.3 APIs for MSensor

This subclause specifies classes that are related to an `MSensor` (Table 4).

Table 4 — Class types of MSensor

Name	Definition
<code>SensedDataBaseType</code>	Java class describing sensed data. All of the classes in the <code>org.iso.mpeg.iomt.msov</code> shall extend this class.
<code>SensorCapabilityListEnumType</code>	Java class specifying the type of sensor capabilities among <code>allSensorCapabilityList</code> , <code>availableSensorCapabilityList</code> , and <code>appliedSensorCapabilityList</code> .
<code>SensorCapabilityListType</code>	Java class describing a list of sensor capabilities.
<code>SensorCapabilityParameterType</code>	Java class describing a parameter of a sensor capability.
<code>SensorCapabilityType</code>	Java class describing a sensor capability.

4.2.4 APIs for MActuator

This subclause specifies classes that are related to a `MActuator` (Table 5).

Table 5 — Class types of MActuator

Name	Definition
<code>ActuationDataBaseType</code>	Java class describing actuation data. All of the classes in the <code>org.iso.mpeg.iomt.macy</code> shall extend this class.
<code>ActuatorCapabilityListEnumType</code>	Java class specifying the type of actuator capabilities among <code>allActuatorCapabilityList</code> , <code>availableActuatorCapabilityList</code> , and <code>appliedActuatorCapabilityList</code> .
<code>ActuatorCapabilityListType</code>	Java class describing a list of actuator capabilities.
<code>ActuatorCapabilityParameterType</code>	Java class describing a parameter of an actuator capability.
<code>ActuatorCapabilityType</code>	Java class describing an actuator capability.

4.2.5 APIs for MAnalyser

This subclause specifies classes that are related to a `MAnalyser` (Table 6).

Table 6 — Class types of MAnalyser

Name	Definition
<code>AnalysedDataBaseType</code>	Java class describing the analysed data. All of the classes which are in the <code>org.iso.mpeg.iomt.maov</code> shall extend this class.
<code>AnalyserCapabilityListEnumType</code>	Java class specifying the type of analyser capabilities among <code>allAnalyserCapabilityList</code> , <code>availableAnalyserCapabilityList</code> , and <code>appliedAnalyserCapabilityList</code> .
<code>AnalyserCapabilityListType</code>	Java class describing a list of analyser capabilities.
<code>AnalyserCapabilityParameterType</code>	Java class describing a parameter of an analyser capability.
<code>AnalyserCapabilityType</code>	Java class describing an analyser capability.

4.2.6 APIs for MStorage

This subclause specifies classes that are related to an `MStorage` (Table 7).

Table 7 — Class types of MStorage

Name	Definition
StorageCommandBaseType	Java class describing the storage command.
StorageCapabilityListEnumType	Java class specifying the type of storage capabilities among allStorageCapabilityList, availableStorageCapabilityList, and appliedStorageCapabilityList.
StorageCapabilityListType	Java class describing a list of storage capabilities.
StorageCapabilityParameterType	Java class describing a parameter of a storage capability.
StorageCapabilityType	Java class describing a storage capability.

4.2.7 APIs for MManager

This subclause specifies classes that are related to an MManager (Table 8).

Table 8 — Class types of MManager

Name	Definition
ManagerDataBaseType	Java class describing data for managing MThings.
ManagerCapabilityListEnumType	Java class specifying the type of manager capabilities among allManagerCapabilityList, availableManagerCapabilityList, and appliedManagerCapabilityList.
ManagerCapabilityListType	Java class describing a list of manager capabilities.
ManagerCapabilityParameterType	Java class describing a parameter of a manager capability.
ManagerCapabilityType	Java class describing a manager capability.

4.2.8 APIs for MAggregator

This subclause specifies classes that are related to a MAggregator (Table 9).

Table 9 — Class types of MAggregator

Name	Definition
AggregatedMThingListType	Java class describing a list of aggregated MThings.
AggregatorCapabilityListEnumType	Java class specifying the type of aggregator capabilities among allAggregatorCapabilityList, availableAggregatorCapabilityList, and appliedAggregatorCapabilityList.
AggregatorCapabilityListType	Java class describing a list of aggregator capabilities.
AggregatorCapabilityParameterType	Java class describing a parameter of an aggregator capability.
AggregatorCapabilityType	Java class describing an aggregator capability.

4.3 ISO/IEC 23093-3 APIs for MSOV

— CapturedTimeType

4.4 ISO/IEC 23093-3 APIs for MACV

— AudioActuationType

— AudioPlayType

— SetBrightnessType
