This document is not an ASTM standard and is intended only to provide the user of an ASTM standard an indication of what changes have been made to the previous version. Because it may not be technically possible to adequately depict all changes accurately, ASTM recommends that users consult prior editions as appropriate. In all cases only the current version of the standard as published by ASTM is to be considered the official document.

# Designation: <del>F467 – 08<sup>ε1</sup></del> F467 – 13

# **Standard Specification for** Nonferrous Nuts for General Use<sup>1</sup>

This standard is issued under the fixed designation F467; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ɛ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

e<sup>1</sup> NOTE—7.1 was editorially corrected in October 2009.

### 1. Scope\*

1.1 This specification covers the requirements for commercial wrought nonferrous nuts 0.250 to 1.500 in. inclusive in diameter in a number of alloys in common use and intended for general service applications.

1.2 Applicable bolts, cap screws, and studs for use with nuts covered by this specification are covered by Specification F468.

1.3 This specification is the inch-pound companion to Specification The values stated in inch-pound units are to be F467M; therefore, no SI equivalents are presented in the specification regarded as standard. No other units of measurement are included in this standard.

NOTE 1-This specification is the inch-pound companion to Specification F467M; therefore, no SI equivalents are presented in the specification.

# 3. Ordering Information

- 3.1 Orders for nuts under this specification shall include the following information:
- 3.1.1 Quantity (number of pieces of each item and size);

3.1.2 Name of item;

3.1.3 Size (diameter and threads per inch);

3.1.4 Alloy number (Table 1);

- 3.1.5 Stress relieving, if required (4.2.3);
- 3.1.6 "Shipment lot" testing, as required (Section 9);

3.1.7 Source inspection, if required (Section 14);

3.1.8 Certificate of compliance or test report, if required (Section 16);

3.1.9 Additional requirements, if any, to be specified on

the purchase order (4.2.1, 7.2, 8.2, 12.1, and 13.1),

3.1.10 Supplementary requirements, if any; and

3.1.11 ASTM designation (including year or published date).

NOTE 2—A typical ordering description is as follows: 10 000 pieces, Hex Nut, 0.250" -20, Alloy 270, Furnish Certificate of Compliance, Supplementary Requirement S 1, ASTM Specification F 467-XX

# 4. Materials and Manufacture

# 4.1 Materials:

4.1.1 The nuts shall be manufactured from material having a chemical composition conforming to the requirements in Table 2 and capable of developing the required mechanical properties for the specified alloy in the finished fastener. See Specification B574 for nickel alloys.

4.1.2 The starting condition of the raw material shall be at the discretion of the fastener manufacturer but shall be such that the finished products conform to all the specified requirements.

# 4.2 Manufacture:

4.2.1 *Forming*—Unless otherwise specified, the nuts shall be hot pressed, cold formed, or machined from suitable material at the option of the manufacturer.

Condition

4.2.2 Condition—Except as provided in 4.2.3, the nuts shall be furnished in the condition specified below:

| Alloy                     | Condition  |
|---------------------------|--|
| Copper (all alloys)       | As formed or stress relieved at manufacturer's<br>option |
| Nickel alloys 400 and 405 | As formed or stress relieved at manufacturer's<br>option |
| Nickel alloy 500          | Solution annealed and aged                               |
| Aluminum alloys:          |  |
| 2024-T4                   | Solution treated and naturally aged                      |
| 6061-T6                   | Solution treated and artificially aged                   |
| 6262-T9                   | Solution treated, artificially aged, and cold            |
|                           | worked   |
| Titanium                  | As formed  |
| 625                       | Annealed   |
|                           |  |

4.2.3 *Stress Relieving*—When required, stress relieving shall be specified by the purchaser for all copper alloys and nickel alloys 400 and 405.

<sup>A</sup> Elements shown as balance shall be arithmetically computed by deducting the sum of the other named elements from 100. <sup>B</sup> Copper plus specified elements = 99.8 min; copper plus silver = 88.5–91.5. <sup>C</sup> Cobalt is to be counted as nickel.

ω

<sup>D</sup> Minimum content of copper plus all other elements with specified limits shall be 99.5 %. <sup>E</sup> An alloy containing as high as 2.6 % silicon is acceptable provided the sum of all the elements other than copper, silicon, and iron does not exceed 0.30 %.

<sup>A</sup> Elements shown as balance shall be arithmetically computed by deducting the sum of the other named elements from 100.

<sup>B</sup> Cobalt is to be counted as nickel.

<sup>C</sup> Alloy 625 material shall be refined using the electroslag remelting process (ESR), or the vacuum arc remelting process (VAR).

<sup>†</sup> Editorially corrected in January 2008.

# iTeh Standards

<sup>A</sup> All reported values are maximums, unless a range is specified.

S

<sup>B</sup> A residual is an element present in a metal or an alloy in small quantities inherent to the manufacturing process but not added intentionally. Residual elements need not be reported unless a report is specifically required by the purchaser.

<sup>C</sup> Ruthenium and Palladium, or both, may be added to Grade 19 for enhanced corrosion resistance as negotiated between purchaser and vendor. Chemical analysis is not required unless specifically negotiated.

<sup>A</sup> For aluminum and titanium alloys hardness values are for information only.

<sup>B</sup>Proof stress values for heavy hex nuts are based on 1.08 times the value for corresponding regular hex nuts.

<sup>C</sup> Aluminum alloy 2024-T4 shall be supplied in naturally aged condition. This material is not recommended for nuts in sizes greater than 1/4 (0.250) in. \*Editorially corrected in January 2008. Typographical error should be F467AC both F467AC or 647AC are acceptable Mechanical Property Mark.

### 5. Chemical Composition

5.1 Chemical Composition—The nuts shall conform to the chemical composition specified in Table 1 for the specified alloy.

#### 5.2 Manufacturer's Analysis:

5.2.1 Except as provided in 5.2.2, when test reports are required on the inquiry or purchase order (3.1.8), the manufacturer shall make individual analyses of randomly selected finished nuts from the product to be shipped and report the results to the purchaser. Alternatively, if heat and lot identities have been maintained, the analysis of the raw material from which the nuts have been manufactured may be reported instead of product analysis.

5.2.2 For aluminum nuts, instead of 5.2.1, the manufacturer may furnish a certificate of conformance certifying compliance with the chemical composition specified in Table 1.

# 5.3 Product Analysis:

5.3.1 Product analyses may be made by the purchaser from finished products representing each lot. The chemical composition thus determined shall conform to the requirements in Table 1.

5.3.2 In the event of disagreement, a referee chemical analysis of samples from each lot shall be made in accordance with 12.1 and 13.1.
