## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 18, *Irrigation and drainage equipment and systems*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

# Agricultural irrigation equipment — Manually and hydraulically operated plastics valves

## AMENDMENT 1

### Foreword

Replace the eighth paragraph with the following:

The main changes are as follows:

- the scope was extended to include hydraulically operated plastics valves in addition to manually operated plastics valves.

### Clause 2

Add the following reference:

ISO 8659, *Thermoplastics valves — Fatigue strength — Test method*

### 5.7

Replace the existing clause with the following:

#### 5.7 Endurance testing

##### 5.7.1 General

This clause applies to manually and hydraulically operated valves.

Testing shall be performed in accordance with ISO 8659 and in accordance with 5.7.2 and 5.7.3 of this document.

##### 5.7.2 Initial leakage test

Before the endurance testing, perform the test according to 5.5.

There shall be no visually detectable leakage.

##### 5.7.3 Test procedure

The valve shall be left open for 10 s. The flow velocity shall not exceed 1,5 m/s.

After closing the valve, apply an internal hydrostatic pressure equal to the PN declared by the manufacturer. Maintain this pressure for:

- 5 s in valves of up to 32 mm (1 1/4 in),
- 10 s in valves larger than 32 mm (1 1/4 in).

The total number of test cycles performed shall be 5 000 cycles, with water at ambient temperature.

During opening and closing, there shall be no visually detectable leakages.

After completion of these cycles, repeat the test according to 5.5. There shall be no visually detectable leakage.
