Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 174, *Jewellery and precious metals*.

This second edition cancels and replaces the first edition (ISO 10713:1992), which has been technically revised.

The main changes are as follows:

- Introduction was added;
- ~~Clause 2~~ Clause 2 was updated;
- ~~Clause 3~~ Clause 3 was added;
- Requirements for coating thickness were revised;
- Methods for measuring gold thickness were revised;
- ~~Table 1 and Table 2~~ Table 1 and Table 2 were updated.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

This document defines the terms 'rolled gold' and 'gold plated' in terms of minimum mass, thickness, and fineness of the applied gold alloy coating. It also establishes a marking classification for purchasers to identify these essential features.

This document applies to gold and gold alloy coatings used in jewellery (both precious and non-precious), general decorative items, and other specialised applications in the jewellery trade that require a relatively thick coating. However, it does not modify the provisions of national regulations or Assay & Hallmarking laws in countries where statutory hallmarking is practised. When requesting plating in accordance with this document, the purchaser specifies the nature of the base metal and the required coating classification number in addition to referencing this document.
