RECOMMENDATION ITU-T H.222.0Information technology – Generic coding of moving pictures and associated audio
information – Systems

Technical Corrigendum 1

Adding missing field compatibleProfileSetsPresent

Summary

Rec. ITU-T H.222.0 | ISO/IEC 13818-1 was developed in 1994 to principally support the combination and synchronization of video and audio coding methods defined in ISO/IEC 13818 Part 2 (Rec. ITU-T H.262) and Part 3. It has since then been extended to support additional video and audio coding specifications as well as multiple kinds of metadata.

This Corrigendum inserts the missing field compatibleProfileSetsPresent in the syntax table. The syntax in the published 8th edition depends on the value of this field and describes its semantics.
