5.2 E — Environmental.....	5
5.3 S — Social.....	5
5.4 G — Governance.....	5
6 Environmental indicators	6
6.1 Final energy consumption of public buildings per year (GJ/m ²).....	6
6.1.1 General.....	6
6.1.2 Indicator requirements.....	6
6.2 Total residential electrical energy use per capita (kWh/year).....	6
6.2.1 General.....	6
6.2.2 Indicator requirements.....	6
6.2.3 Data sources.....	6
6.3 Percentage of total electricity consumption from renewable sources.....	7
6.3.1 General.....	7
6.3.2 Indicator requirements.....	7
6.4 Electricity consumption of public street lighting per kilometre of lighted street (kWh/year).....	7
6.4.1 General.....	7
6.4.2 Indicator requirements.....	7
6.5 Square metres of city owned/operated green roof space as a percentage of all roof space of all city-owned/operated buildings.....	7
6.5.1 General.....	7
6.5.2 Indicator requirements.....	8
6.6 Number of electric vehicle (EV) charging station ports per registered electric vehicle (EV).....	8
6.6.1 General.....	8
6.6.2 Indicator requirements.....	8
6.6.3 Data sources.....	9
6.7 Number of hydrogen fuel cell vehicle charging nozzles per personal hydrogen fuel cell vehicle.....	9
6.7.1 General.....	9
6.7.2 Indicator requirements.....	9
6.8 Fine particulate matter (PM _{2,5}) concentration.....	9
6.8.1 General.....	9
6.8.2 Indicator requirements.....	9
6.9 Percentage of designated natural protection areas.....	10
6.9.1 General.....	10
6.9.2 Indicator requirements.....	10
6.10 Greenhouse gas (GHG) emissions measured in tonnes per capita.....	10
6.10.1 General.....	10
6.10.2 Indicator requirements.....	10
6.11 Number of real-time remote air quality monitoring stations per square kilometre (km ²).....	11
6.11.1 General.....	11
6.11.2 Indicator requirements.....	11
6.11.3 Data sources.....	12
6.12 Percentage of city land area covered by tree canopy.....	12

6.15.1	General	14
6.15.2	Indicator requirements	14
6.15.3	Data sources	14
6.16	Percentage of households with smart water meters	14
6.16.1	General	14
6.16.2	Indicator requirements	15
6.16.3	Data sources	15
6.17	Percentage recycled solid waste	15
6.17.1	General	15
6.17.2	Indicator requirements	15
6.17.3	Data sources	16
6.18	Percentage of solid waste disposed of in a sanitary landfill	16
6.18.1	General	16
6.18.2	Indicator requirements	16
6.18.3	Data sources	17
6.19	Percentage of solid waste treated in energy-from-waste plants	17
6.19.1	General	17
6.19.2	Indicator requirements	17
6.19.3	Data sources	17
6.20	Percentage of solid waste biologically treated and used as compost or biogas	18
6.20.1	General	18
6.20.2	Indicator requirements	18
6.20.3	Data sources	18
6.21	Percentage of solid waste disposed of in an open dump	18
6.21.1	General	18
6.21.2	Supporting indicator requirements	19
6.21.3	Data sources	19
6.22	Percentage of solid waste disposed of by other means	19
6.22.1	General	19
6.22.2	Indicator requirements	19
6.22.3	Data sources	20
6.23	Household hazardous waste generation per capita (tonnes)	20
6.23.1	General	20
6.23.2	Indicator requirements	20
6.23.3	Data sources	21
6.24	Percentage of recycled household hazardous waste	21
6.24.1	General	21
6.24.2	Supporting indicator requirement	21
6.24.3	Data sources	21
6.25	Percentage of commuters using a travel mode to work other than a personal vehicle	21
6.25.1	General	21
6.25.2	Indicator requirements	22
6.25.3	Data sources	22
6.26	Percentage of registered low-emission vehicles	22

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Introduction

On a global scale, environmental, social and governance (ESG) principles are at the core of the discussion on responsible leadership in governments and private industries alike. Cities can leverage these principles to foster a more sustainable and inclusive prosperity for their citizens guided by data-driven management for sound governance into the future. However, a critical weakness has been identified in this field: a lack of standards and codes on how to measure ESG with comparable data, governed by standardized criteria and a trusted measurement platform. This lack of standardization has created a sense of skepticism in ESG assessments and organizations are seeking new guidance on how best to measure ESG performance.

It is within this global context of an evolving ESG ecosystem that cities are stepping up – understanding the need for standardization across ESG principles to ensure much-needed successes in municipal programming, planning and service delivery. To be successful in adopting ESG programs and strategies, city leaders need to be equipped with standardized criteria to build trusted measurement platforms. With standardized city-level data, city managers, planners, mayors and sector leaders will be better able to assess and track advances in a city’s ESG profile. A subset of these key performance indicators (KPIs) can also be applied to measure results in regions, counties, provinces, states, countries and other geographic levels.

Worldwide, cities are already utilizing ISO 37120, ISO 37122 and ISO 37123 for cities to build standardized data sets to support their work in delivering services to their residents, in advancing quality of life, and in building smarter and more resilient futures for their cities. These municipal leaders recognize the importance of standardized data to support and validate their commitments to ESG. [Figure 1](#) shows the relationship between the ISO 37120, ISO 37122 and ISO 37123 standards for cities.

While KPIs (252 in total plus a set of profile indicators) exist across ISO 37120, ISO 37122 and ISO 37123 for cities that can support ESG measurements in cities, there are also gaps within these indicators. This document is designed to draw on both a sub-set of KPIs in ISO 37120, ISO 37122 and ISO 37123 for cities (see [Annex A](#)) and also to include new KPIs developed with full definitions and methodologies to fill these critical gaps, making this document a comprehensive ESG measurement platform for cities. This document includes a core set of fully numeric KPIs that will help city leaders worldwide to direct ESG-informed and ESG-driven municipal programming, planning and service delivery. This document, in conjunction with ISO 37120, ISO 37122 and ISO 37123 is intended to provide a complete set of indicators to better assess and track advances in a city’s ESG profile.

Cities of all sizes and in line with their own purposes can use their ESG profile for setting benchmarks and milestones for their growth and development. Cities, governments and researchers can also make use of the ESG profiles for inter-city comparison. This document is a flexible tool designed to support cities across

objectives. Furthermore, indicators can be useful tools for other levels of government, including regional and other upper-tier governments when considering ESG objectives.

This document is developed with the understanding that cities are increasingly on the frontline in delivering services that improve quality of life for citizens, that protect the environment, consider equity and social needs, and prioritize social responsibility, underpinned by a strong model of governance and enduring legislation. This document will equip city leaders with data to nurture prosperous, inclusive, and liveable cities, with a high quality of life for residents, now and in the future.
