This Capability Detail Specification was approved on 1997-08-06.

Up-to-date lists and bibliographical references of other detail specifications relating to EN 123000:1991 and EN 123100:1992 may be obtained on application to the Central Secretariat or to any CENELEC member.

This CECC Detail Specification exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the Central Secretariat has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

## Foreword

This Capability Detail Specification has been prepared by CENELEC/TC CECC/SC 52, Printed Boards (formerly designated CECC Working Group 23).

It was approved as CECC 23 100-801 on 1997-08-06.

This Capability Detail Specification replaces EN 123100-800:1992.

It should be read in conjunction with EN 123000:1991 and EN 123100:1992 and with the current regulations for the CECC System.

## 1 General

### 1.1 Scope

This Capability Detail Specification (CapDS) is based upon EN 123100. It relates to rigid single and double-sided printed boards with plain holes, made with materials and surface finishes as specified in clause 2.

### 1.2 Object

To specify the Capability Qualifying Component (CQC), its characteristics to be tested, the test methods and conditions to be applied and the requirements to be fulfilled for testing basic and extended capability.

## 2 Capability Qualifying Component (CQC)

Test boards to be used as CQCs for basic capability shall:

- be made from one of the copper-clad base materials specified in 2.1 of this CapDS, base material thickness of 1,6 mm  $\pm$  0,14 mm and 35  $\mu$ m copper foil on both sides.
- bear the composite test pattern (CTP) specified in 8.2 of EN 123100 (or equivalent CTP).
- have one of the surface finishes specified by groups 11, 12, 13, 14, 15, 16, 17 or 18 in 2.2 of this CapDS.

Requirements for test boards to be used as modified CQCs for the demonstration of additional capability are detailed in clause 5 of this CapDS.

### 2.1 Materials

(standards.iteh.ai)

Material group designation	Specification	Base Material Type	Grade	Base material thickness range (mm)	Cu thickness ( $\mu$ m)
A	EN 60249-2-1	Phenolic paper	High Electrical	0,2 ..... 6,4	18, 35, 70, 105
	EN 60249-2-2	Phenolic Paper	Economic		
	EN 60249-2-6	Phenolic Paper	Defined flammability (horizontal)		
	EN 60249-2-7	Phenolic Paper	Defined flammability (vertical)		
	EN 60249-2-3	Epoxide paper	Defined flammability (vertical)		
B	EN 60249-2-4	Epoxide Woven Glass	General purpose	0,2 ..... 6,4	18, 35, 70, 105
	EN 60249-2-5	Epoxide Woven Glass	Defined flammability (vertical)		

## 2.2 Surface finishes

### 2.2.1 Metallic finishes

Finish group Designation	Surface finish	Abbreviation for QPL	Remarks
11	Bare copper	Cu	
12	Copper with solderable organic protective coating	Cu(opc)	
13	Copper with oxide	Cu(CuO)	
14	Tin, Tin-Lead	Sn, SnPb	
15	Tin-Lead (fused)	SnPb(f)	
16	Tin-Lead (dipped and levelled)	SnPb(dl)	
17	Tin-Lead (roller coated)	SnPb(rt)	
18	Immersion Gold over Electroless Nickel	AuNi(smt)	
19			not assigned
20			not assigned
21	Specimen K 5 µm, gold plated on copper, remainder using finish group 11-17 (see below)	5AuCu	
22	Specimen K 0,7 µm, gold plated on nickel, remainder using finish group 11-17 (see below)	0,7AuNi	
23	Specimen K 2,5 µm, gold plated on copper, remainder using finish group 11-17 (see below)	2,5AuCu	
24	Specimen K 2,5 µm, gold plated on nickel, remainder using finish group 11-17 (see below)	2,5AuNi	

The demonstration of metallic group finishes 21, 22, 23 or 24 shall be combined with a finish from groups 11, 12, 13, 14, 15, 16, 17 or 18. Each claimed combination of metallic finishes shall be tested separately. Selective and non-selective finishes of the same material, where claimed, must be demonstrated separately.

#### 2.2.1.1 Accelerated ageing

<https://standards.iteh.ai/catalog/standards/sist/ed35b719-b625-4a05-9179-9caa7af12fc2/sist-cecc-23-100-801-2002>

The ability of finish groups 11, 12, 13, 14, 15, 16, 17 or 18 to solder after extended or adverse storage conditions is demonstrated using accelerated ageing. This test shall be carried out on those finishes where accelerated ageing is claimed. Each finish that has complied with the requirements of the ageing test is highlighted by the inclusion of an asterisk (\*) adjacent to that finish in the manufacturers abstract of capability as published in the QPL.

### 2.2.2 Organic finishes (where claimed)

Finish group designation	Organic finish	Abbreviation for QPL
a	Dry film solder mask	DSM
b	Wet resist solder mask	WSM
c	Liquid photopolymer solder mask	LSM
d	Marking ink	MI
e	Conductive ink	CI

The demonstration of organic finish groups a, b, c or d shall be over a finish from groups 11, 12, 13, 14, 15, 16, 17 or 18. All claimed types of solder resist shall be tested separately.

### 2.3 Variant designation

The combination of any material group designated in 2.1 and any of the surface finishes designated in 2.2 constitutes a variant. The variant is designated by the combination of both material and finish group designations. e.g. A12(b) or A12/21(c).

## 3 Capability approval

### 3.1 Range of capability approval

Capability approval granted on the testing of one variant is valid within the limits specified in 3.7 of EN 123000 for metal clad base material within one group designation, all base material thicknesses and all foil thicknesses of the material in accordance with 2.1 of this CapDS; and all metallic surface finishes within one surface finish group as given in 2.2.1 of this CapDS, that is:

finish group 11	covers finish group 11 only
finish group 12	covers finish group 11 and 12
finish group 13	covers finish group 11 and 13
finish group 14	covers finish group 11 and 14
finish group 15	covers finish group 11 and 15
finish group 16	covers finish group 11 and 16
finish group 17	covers finish group 17 only
finish group 18	covers finish group 18 only
finish group 21	covers finish group 21 only
finish group 22	covers finish group 22 and 24
finish group 23	covers finish group 21 and 23
finish group 24	covers finish group 24 only

### 3.2 QPL information

[SIST CECC 23 100-801:2002](https://standards.iteh.ai/catalog/standards/sist/ed35b719-b625-4a05-9179-9a778262/sist-cecc-23-100-801-2002)

[https://standards.iteh.ai/catalog/standards/sist/ed35b719-b625-4a05-9179-](https://standards.iteh.ai/catalog/standards/sist/ed35b719-b625-4a05-9179-9a778262/sist-cecc-23-100-801-2002)

Information for the QPL (published as CECC 00-200) shall be given in accordance with 3.4 of EN 123000, and shall contain the following details relative to the CapDS:

- reference to the CECC Generic Specification EN 123000
- reference to the CECC Sectional Specification EN 123100
- reference to the CECC CapDS CECC 23 100-801
- base material for which approval is granted as given in 2.1 of this CapDS
- the surface finishes for which approval is granted as given in 2.2 of this CapDS
- any additional capability 3.5.3 of EN 123000 refers

## 4 Capability test programme

NOTE: In all cases the number of failures permitted is zero.

### 4.1 Capability demonstration

Capability shall be demonstrated using 9 CTPs of one variant from each material group claimed. Testing shall be in accordance with Table I.

#### 4.1.1 Other metallic surface finishes

If claimed, other metallic surface finishes, as designated in 2.2.1 shall be demonstrated by the manufacture and testing of 3 CTPs plus sufficient extra A and H specimens to meet the requirements of Table II. The maximum active board size for the finish shall be demonstrated. See also clause 5.

#### 4.1.2 Organic surface finishes

Each claimed organic surface finish, as designated in 2.2.2, shall be demonstrated by the manufacture and testing of 3 CTPs using the pattern specified in annex A (marking inks) or annex B (solder masks). Testing shall be in accordance with Table III.

#### 4.1.3 Demonstration of impedance control

Special CQCs shall be constructed in accordance with figure D.5, configured as either a 'stripline' or 'microstrip'. Demonstrations shall be made for the following variants, as required and defined by the approved manufacturer:

- Each base material type (e.g. woven glass epoxy);
- Each impedance extreme, and a 50  $\Omega$  mandatory demonstration;
- Conductor width and lateral separation minima;
- Each metallic surface finish.

Tolerances at 50  $\Omega$  and each impedance extreme shall be claimed prior to demonstration, and achieved.

For each solder resist type and thickness claimed, impedance value derating factors shall be declared.

Impedance control shall be shown on the Capability Approval certificate as a separate annex.

## 5 Additional capability

**iTeh STANDARD PREVIEW**  
(standards.iteh.ai)

Maximum active board size see 8.3 of EN 123000

Minimum conductor width and spacing Specimen F of the CTP to be modified to provide additionally 5 conductors and 4 spacings, each of the claimed minimum. Initial foil thickness of less than 35  $\mu\text{m}$  may be used for this demonstration, but the thickness used shall be declared.

Metallic conductor finishes Manufacturers are permitted to demonstrate conductor finishes other than those detailed in 2.2.1. The finish shall be demonstrated in accordance with table IIa and detailed in the manufacturer's Capability Manual.

## 6 Traceability

Traceability of all specimens to the original product shall be maintained. The method used to identify individual test specimens shall not prejudice the test result.

Table I

## Capability approval test schedule

(Table I)

Characteristics	Test No. IEC 60326-2	Specimen of Composite Test Pattern	Requirements / Material							Remarks
			EN 60249-2- paper					glass		
			2	1	6	7	3	4	5	
<u>General examination</u>  <u>Visual examination</u>  Conformity and identification	1	All CQCs	Pattern, marking, identification, material and finishes shall comply with this CapDS. There shall be no apparent defects. Any identification for traceability purposes shall be verified.							
Appearance and workmanship	1a	All CQCs	The boards shall appear to have been processed in a careful and workmanlike manner, in accordance with good current practice.  The base materials, conductors, surface finishes shall be of uniform appearance and free from cracks, burns, pits, nodules and blisters.  Metallic surface finishes shall be free from scratches which penetrate to an underlying surface.							
Conductor defects	1b	All CQCs	There shall be no breaks in conductors intended to be continuous.  The presence of local defects (e.g. nicks and pinholes) shall not reduce the conductor width by more than 25%.  The length of the defect shall not be greater than the nominal conductor width.							Where necessary, this shall be verified by dimensional examination using test 2a.  Indentations in conductors, other than those in edge board contacts, shall not be a reason for rejection.
Particles between conductors	1b or 1c	All CQCs	There shall be no conductive material bridging conductors shown as intended to be mutually unconnected by the CTP. Residual particles are permissible provided the leakage path is not reduced by more than 20%.							Where necessary, this shall be verified by dimensional examination using test 2a.
Edge connector defects	2a	All specimens K	The surface of edge board contacts within the contact zone shall be smooth, and free from pitting or scratches penetrating the surface finish.  Within the contact zone of each contact, there shall be no more than one indentation or bump. (see annex C)							
<u>Dimensional examination</u>  Board dimensions	2	All CQCs	CQC outline dimensions as claimed. Board thickness shall be 1,6 mm $\pm$ 0,14 mm.							Thickness measurement of the printed board shall exclude the surface finishes

(Table I)

Characteristics	Test No. IEC 60326-2	Specimen of Composite Test Pattern	Requirements / Material							Remarks
			EN 60249-2- paper					glass		
			2	1	6	7	3	4	5	
Flatness	12a	All CQCs	The radius of curvature shall not be less than: 2000 mm					3000 mm		
Board thickness in the zone of edge board contacts	2	All specimens K	1,6 mm ± 0,2 mm							
Holes	2	All CQCs	Hole diameter shall comply with 8.2 of EN 123100, or as claimed, with a tolerance of ± 0,1 mm.							
Misalignment of hole and land	1a 2a	All CQCs	There shall be no breakout from the land perimeter. There shall be no interruption of the junction between the land and the connecting conductor.							
Conductor width	2	All specimens F	Conductor widths greater than or equal to 0,25 mm shall not deviate from nominal values by more than +0,08 mm, -0,05 mm.  Nominal conductor widths less than 0,25 mm shall be within the manufacturer's claimed tolerance							Conductor defects and particles between conductors shall be disregarded when evaluating conductor width and spacing - see 'visual inspection'.
Spacing between conductors	2	All specimens F	Nominal conductor spacings of 0,5 mm shall not be less than 0,42 mm.  Nominal conductor spacings of 0,25 mm shall not be less than 0,17 mm.  Nominal conductor spacings of less than 0,25 mm shall be within the manufacturer's claimed tolerance.							Artwork for CTPs may need etch factor allowance adjustments in order to satisfy these requirements
<u>Electrical tests</u>  <u>Insulation resistance</u>  Preconditioning  Climatic environmental conditioning  Measurement at 100 Vdc in standard atmospheric conditions	18a      6a		IEC 60068-2-3 Test Ca damp heat steady state, 40 °C / 95% RH 4 days					30 MΩ   400 MΩ   400 MΩ   80 MΩ   800 MΩ min   min   min   min   min		Paper only
<u>Process contamination</u>  Preconditioning  Climatic environmental conditioning  Measurement at 500 Vdc in damp heat conditions	18a    6a	3 off E	IEC 60068-2-3 Test Ca; damp heat steady state for 21 days with 60 Vdc applied. (1 mA maximum).					100 MΩ min		Epoxide Glass only    Measure at 0, 10 and 21 days.
