AMENDMENT 1  
2023-05

---

---

**Petroleum products and lubricants —  
Determination of rust-prevention  
characteristics of lubricating  
greases —**

Part 1:

**Dynamic wet conditions**

**AMENDMENT 1: Test bearings**

*Produits pétroliers et lubrifiants — Détermination des  
caractéristiques antirouille des graisses lubrifiantes —*

*Partie 1: Conditions dynamiques humides*

*AMENDEMENT 1: Roulements d'essai*

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 28, *Petroleum and related products, fuels and lubricants from natural or synthetic sources*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

# Petroleum products and lubricants — Determination of rust-prevention characteristics of lubricating greases —

## Part 1: Dynamic wet conditions

### AMENDMENT 1: Test bearings

#### *Normative references*

Add the following reference:

DIN 630, *Rolling bearings — Self aligning ball bearings — Double row with cylindrical or tapered bore*

Delete the following reference:

ISO 15, *Rolling bearings — Radial bearings — Boundary dimensions, general plan*

#### 6.1

Replace the text with the following:

**6.1 Test bearings**, double row self-aligning bearings in accordance with DIN 630, such as SKF1306K/236725<sup>1)</sup> with a steel cage, specially inspected, protected with a waxy type corrosion inhibitor (no preservative with chemical rust inhibitor) and packed.

**NOTE** It is possible that a chemical rust inhibitor containing preservative is not completely eliminated during the washing procedure, thus leaving some corrosion protection and possibly introducing bias in the test.

---

1) SKF 1306K/236725 is an example of a suitable product available commercially. This information is given for convenience of the user of this document and does not constitute an endorsement of ISO of this product.
