

Designation: F3027 – 13

Standard Guide for Training of Personnel Operating in Mountainous Terrain (Mountain Endorsement)¹

This standard is issued under the fixed designation F3027; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This guide establishes the minimum training, including general and field knowledge, skills, and abilities, for search and rescue personnel who conduct operations in mountainous terrain.

1.2 A Mountain Endorsement is intended only for those individuals capable of operating in the difficult conditions found in mountainous terrain, at altitudes that may have a negative impact on human physiology.

1.3 Specifically, Mountain Endorsed individuals may, under qualified supervision, perform their normal duties safely and effectively in mountainous terrain.

1.4 A Mountain Endorsement alone is not sufficient to indicate that an individual has the knowledge, skills, and/or abilities to perform any specific duties, including search and rescue operations, other than those defined within this guide.

1.5 This guide alone does not provide the minimum training requirements for performing operations in partially or fully collapsed structures, in- or on-water, in confined spaces, underground (such as in caves, mines, and tunnels), or in an alpine environment.

1.6 Type I-IV teams (as defined in F1993) which may utilize personnel trained to this guide are Kind A (wilderness), Kind B (urban), and Kind C (mountainous), Kind D (disaster/collapse), Kind E (inland water), Kind G (cave), Kind H (mine), Kind I (avalanche), Kind J (evidence/cadaver), Kind K (aircraft), and/or Kind L (unclassified).

1.7 Mountain Endorsed SAR personnel must work under qualified supervision, as deemed appropriate by the Authority Having Jurisdiction (AHJ).

1.8 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

¹ This test method is under the jurisdiction of ASTM Committee F32 on Search and Rescue and is the direct responsibility of Subcommittee F32.03 on Personnel, Training and Education.

Current edition approved Sept. 1, 2013. Published October 2013. DOI: 10.1520/F3027-13.

3. Terminology

3.1 Definitions of Terms Specific to This Standard:

3.1.1 *alpine environment, n*—mountainous terrain, typically above tree line, where the ability to negotiate routes rated Class 2–5³ is required and where travel is further affected by any combination of altitude, extreme weather, extensive exposure to snow/ice obstacles, avalanche risk, and crevasses. In general, the alpine environment includes all mountainous terrain above 3,500 meters.

3.1.2 *alpine ice axe, n*—as defined by the UIAA (Union Internationale Des Associations D'Alpinisme), a Type B ice tool (the UIAA Basic type) with lower strength, for use in general circumstances, as on glacier for snow hiking, for ski mountaineering, etc., and which meets the requirements of UIAA 152 or CE EN 13089:2011.

3.1.3 *exposure, n*—the degree to which a person is exposed on a high, sheer, and unsheltered rock face.

3.1.4 *mountainous terrain, n*—a tract of land characterized by steep slopes and great variations in elevation, where the

ability to negotiate routes rated Class 2–4⁴, and occasionally Class 5⁵, is required, and where travel is limited by steep to vertical rock, steep forested or brush-covered terrain, talus slopes, boulder fields, and occasional snow and/or ice obstacles.

3.1.5 *qualified supervisor, n*—an individual with demonstrated knowledge or competence in a task, to whom the AHJ has granted the authority to observe and oversee an individual performing that task.

3.2 For definitions of other terms used in this guide, see Terminology F1773, Guides F1993, F2209, and F2752.

4. Significance and Use

4.1 This guide establishes a minimum standard for training of SAR personnel who conduct operations in mountainous terrain.

4.1.1 Mountain Endorsed individuals are required to have, at a minimum, the knowledge, skills, and abilities pertaining to safe movement individually, or as a member of a team, in mountainous terrain.

4.1.2 Every person who is identified as Mountain Endorsed shall meet the requirements of this guide.

4.1.3 Mountain Endorsed individuals shall be entitled to add the prefix “Mountain Endorsed”) to their current training levels.

4.2 This guide only establishes the minimum knowledge, skills, and abilities required for a person to operate in mountainous terrain as a part of a larger team. No other skills are included or implied.

4.3 Mountain Endorsement only indicates that personnel are qualified to operate safely and effectively in mountainous terrain in their normal area of operations.

4.3.1 A Mountain Endorsement alone does not indicate that an individual possesses adequate field skills and knowledge to make mission-critical decisions.

4.4 This guide is an outline of the topics required for training or evaluating a Mountain Endorsed individual, and may be used to assist in the development of a training document or program.

4.5 This guide can be used to evaluate a document to determine if its content includes the topics necessary for training individuals to operate in the mountainous environment. Likewise, this guide can be used to evaluate an existing training program to see if it meets the requirements in this guide.

4.6 The knowledge, skills, and abilities presented in the following sections are not in any particular order and do not represent a training sequence.

4.7 This guide does not stand alone and must be used with other ASTM Standards to identify the knowledge, skills, and abilities needed to conduct search and/or rescue in the mountainous environment.

4.8 Though this guide establishes only minimum standards, it does not imply that a Mountain Endorsed individual is a “trainee,” “probationary,” or other similarly termed member of an organization.

4.8.1 The AHJ is responsible for determining the requirements and qualifications for its team member ratings.

4.8.2 Nothing in this guide precludes an AHJ from adding additional requirements for its own members.

4.9 Mountain Endorsed individuals shall document training by completion of a position task book, or by field demonstration under qualified supervision. Where proficiency in a skill or ability must be demonstrated, unless stated otherwise it shall be demonstrated for initial qualification, and as often as required by the AHJ.

5. General Knowledge

5.1 The AHJ shall verify that a Mountain Endorsed person possesses both attitude and aptitude for working in mountainous terrain:

5.1.1 The individual must demonstrate the ability to function effectively in highly exposed locations, at altitude, in the conditions normal to that terrain;

5.1.2 The individual must demonstrate the ability to move safely and effectively anywhere in that terrain.

5.2 Mountain Endorsed individuals shall demonstrate knowledge of the following:

5.2.1 The differences between wilderness travel and mountain travel.

5.2.2 Human functional and survival needs in cold, windy, and wet environments, including:

5.2.2.1 Clothing (suitable for all four seasons);

5.2.2.2 Shelter, both emergency and extended stay;

5.2.2.3 Nutrition;

5.2.2.4 Hydration;

5.2.2.5 Hygiene;

5.2.2.6 Sanitation;

5.2.2.7 Individual and team safety issues specific to operating in mountainous terrain.

5.2.3 Medical conditions such as:

5.2.3.1 Acute Mountain Sickness (AMS);

5.2.3.2 High Altitude Pulmonary Edema (HAPE);

5.2.3.3 High Altitude Cerebral Edema (HACE);

5.2.3.4 Hypothermia;

5.2.3.5 Snow blindness;

5.2.3.6 Frostbite.

5.2.4 Risks and hazards specific to mountainous terrain, and methods for avoiding or mitigating them. Such risks and hazards include:

5.2.4.1 Personal fall;

5.2.4.2 Rock fall;

5.2.4.3 Severe and rapidly changing weather;

5.2.4.4 Avalanches if avalanches occur within the normal response area;

5.2.4.5 Rapidly rising water and flash floods.

5.3 If avalanches occur within the normal response area, or if required by the AHJ, Mountain Endorsed individuals shall
