

Designation: B36/B36M - 08a B36/B36M - 13

# Standard Specification for Brass Plate, Sheet, Strip, And Rolled Bar<sup>1</sup>

This standard is issued under the fixed designation B36/B36M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (\$\epsilon\$) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

# 1. Scope\*

1.1 This specification establishes the requirements for brass plate, sheet, strip, and rolled bar of the following alloys:<sup>2</sup>

| Copper Alloy | Previous                | Nominal Co | mposition |  |
|--------------|-------------------------|------------|-----------|--|
| UNS No.      | Trade Name              | Copper, %  | Zinc, %   |  |
| C21000       | Gilding, 95 %           | 95         | 5         |  |
| C22000       | Commerical Bronze, 90 % | 90         | 10        |  |
| C22600       | Jewerly Bronze, 87½ %   | 87.5       | 12.5      |  |
| C23000       | Red Brass, 85 %         | 85         | 15        |  |
| C24000       | Low Brass, 80 %         | 80         | 20        |  |
| C26000       | Cartridge Brass, 70 %   | 70         | 30        |  |
| C26800       | Yellow Brass, 66 %      | 66         | 34        |  |
| C27200       |                         | 63         | 37        |  |
| C28000       | Muntz Metal, 60 %       | 60         | 40        |  |

1.2 <u>Units—</u>The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.

## 3. General Requirements

- 3.1 The following sections of Specification B248 or B248M constitute a part of this specification:
- 3.1.1 Terminology
- 3.1.2 Materials and Manufacture
- 3.1.3 Dimensions, Mass, and permissible Variations
- 3.1.4 Workmanship, Finish, and Appearance
- 3.1.5 Sampling
- 3.1.6 Number of tests and Retests

<sup>&</sup>lt;sup>1</sup> This specification is under the jurisdiction of ASTM Committee B05 on Copper and Copper Alloys and is the direct responsibility of Subcommittee B05.01 on Plate, Sheet, and Strip.

Current edition approved Oct. 1, 2008Oct. 1, 2013. Published November 2008October 2013. Originally approved in 1920. Last previous edition approved in 2008 as B36/B36M – 08a. DOI: 10.1520/B0036\_B0036M-08A.-10.1520/B0036\_B0036M-13.

<sup>&</sup>lt;sup>2</sup> SAE Specifications CA210, CA220, CA230, CA240, CA260, CA268, and CA272 conform to the requirements for Copper Alloy UNS Nos. C21000, C23000, C24000, C26000, C26800, and C27200, respectively.

<sup>&</sup>lt;sup>3</sup> For referenced ASTM standards, visit the ASTM website, www.astm.org, or contact ASTM Customer Service at service@astm.org. For *Annual Book of ASTM Standards* volume information, refer to the standard's Document Summary page on the ASTM website.

- 3.1.7 Specimen Preparation
- 3.1.8 Test Methods
- 3.1.9 Significance of Numerical Limits
- 3.1.10 Inspection
- 3.1.11 Rejection and Rehearing
- 3.1.12 Certification
- 3.1.13 Test Reports
- 3.1.14 Packaging and Package Marking
- 3.2 In addition, when a section with a title identical to that referenced in 3.1, appears in this specification, it contains additional requirements which supplement those appearing in Specification B248 or B248M.

#### 4. Terminology

4.1 For definitions of terms related to copper and copper alloys, refer to Terminology B846.

# 5. Ordering Information

- 5.1 Orders for products should include the following information: Include the following specified choices when placing orders for product under this specification, as applicable:
  - 5.1.1 ASTM designation and year of issue,
  - 5.1.2 Copper alloy UNS No. designation,
  - 5.1.3 Quantity,
  - 5.1.4 Form of material: plate, sheet, strip, or rolled bar,

**TABLE 1 Chemical Requirements** 

| Copper Alloy UNS No. | Copper, %    | Lead, max, % | Iron, max, % | Zinc      |
|----------------------|--------------|--------------|--------------|-----------|
| C21000               | 94.0 to 96.0 | 0.05         | 0.05         | remainder |
| C22000               | 89.0 to 91.0 | 0.05         | 0.05         | remainder |
| C22600               | 86.0 to 89.0 | 0.05         | 0.05         | remainder |
| C23000               | 84.0 to 86.0 | 0.05         | 0.05         | remainder |
| C24000               | 78.5 to 81.5 | 0.05         | 0.05         | remainder |
| C26000               | 68.5 to 71.5 | 0.07         | 0.05         | remainder |
| C26800 <sup>A</sup>  | 64.0 to 68.5 | 0.09         | 0.05         | remainder |
| C27200 <sup>B</sup>  | 62.0 to 65.0 | 0.07         | 0.07         | remainder |
| C28000 <sup>C</sup>  | 59.0 to 63.0 | 0.09         | 0.07         | remainder |

A Material shall be free from beta constituent when examined at a magnification of 75 diameters.

- 5.1.3 Temper (Section 7),
- 5.1.4 Dimensions: thickness, width, and length if applicable, edges,
- 5.1.7 Tolerances (Section 10),
- 5.1.5 How furnished: rolls, stock straight lengths with or without coils, ends, specific lengths with or without ends (Section 10),
- 5.1.6 Type of edge, if required (SectionQuantity: total weight or total length or number of pieces of each size, 10), and
- 5.1.7 When the product is purchased for agencies of the U.S. Government. Intended application.
- 5.2 The following options are available and should be but may not be included unless specified at the time of placing of the order when required:
  - 5.2.1 Heat identification or traceability details,
  - 5.2.2 Certification,
  - 5.2.3 Mill test report, Test Report,
  - 5.2.4 Special tests or exceptions, if any.
- 5.2.4 Supplemental requirements If product is purchased for agencies of the U.S. government as given in Government (see the Supplemental Requirements section of Specifications B248 or B248M. for additional requirements, if specified).

#### 6. Chemical Composition

- 6.1 The material shall conform to the chemical compositional requirements in Table 1 for the copper alloy UNS No. designation specified in the ordering information.
- 6.2 These composition limits do not preclude the presence of other elements. By agreement between the manufacturer and purchaser, limits may be established and analysis required for unnamed elements.

<sup>&</sup>lt;sup>B</sup> Small amounts of beta constituent, if present, may interfere in some instances with severe forming or drawing; therefore, suitability for forming or drawing should be established between manufacturer and purchaser.

c It is anticipated that this material will contain the beta constituent that may interfere with severe forming or drawing operations.

6.3 Either For alloys in which zinc is listed as "remainder," either copper or zinc may be taken as the difference between the sum of results of all other elements analyzed determined and 100 %. When all elements in Table 1 are analyzed, determined, the sum of the results shall be as shown in the in the table as follows: following table:

| Copper Alloy UNS No. | Copper Plus Named<br>Elements, % min |
|----------------------|--------------------------------------|
| C21000               | 99.8                                 |
| C22000               | 99.8                                 |
| C22600               | 99.8                                 |
| C23000               | 99.8                                 |
| C24000               | 99.8                                 |
| C26000               | 99.7                                 |
| C26800               | 99.7                                 |
| C27200               | 99.7                                 |
| C28000               | 99.7                                 |

# 7. Temper

- 7.1 As Hot-Rolled (M20)—Hot Rolled Temper M20—The standard temper of sheet and plate and produced by hot rolling as designated in Table 2 or Table 3.
- 7.2 Rolled (H)—Cold Rolled Tempers H01 to H10—The standard tempers of cold rolled material are as designated in Table 2 or Table 3 with the prefix "H". Former designations and the standard designations as detailed in Classification B601 are shown.
- 7.3 Annealed (OS)—<u>Tempers OS015 to OS120</u>—The standard tempers of annealed material are as designated in <u>Tables 4 and 5</u>—Tables 4 and 5... Nominal grain size and the standard designations are detailed in Classification <u>B601</u> are shown.
- 7.4 Annealed-To-Temper (O)—080, 081, or 082—The standard tempers of annealed-to-temper material are as designated in Table 6 or Table 7 with the prefix "O." Former designations and the standard designations as detailed in Classification B601 are shown.
  - 7.5 Special or nonstandard tempers are subject to negotiation between the manufacturer and purchaser (see 5.1.55.1.3).

# 8. Grain Size for Annealed Tempers

- 8.1 Grain size shall be the standard requirement for all products of product in the annealed (OS) tempers.
- 8.2 Acceptance or rejection based upon grain size shall depend only on the average grain size of the test specimens and a test specimen taken from each of two sample portions, and each specimen shall be within the limits prescribed in Table 4 Table 4 when determined in accordance with Test Methods Method E112.
  - 8.3 The average grain size shall be determined on a plane parallel to the surface of the product.

# 9. Mechanical Properties Property Requirements

- 9.1 Tensile Strength Requirements of Cold Rolled Tempers
- 9.1.1 Product furnished under this specification shall conform to the tensile strength requirements prescribed in Table 2 or Table 3 when tested in accordance with Test Methods Method E8E8/E8M or E8M. The test specimens shall be taken so the longitudinal axis of the specimen is parallel to the direction of rolling.
  - 9.1.2 Acceptance or rejection based upon mechanical properties shall depend only on tensile strength.
  - 9.2 Tensile Strength Requirements of Annealed-to-TemperAnnealed-to-Tempers
- 9.2.1 Product furnished under this specification shall conform to the tensile strength requirements prescribed in Table 6 or Table 7 when tested in accordance with Test Methods Method E8E8/E8M or E8M. The test specimens shall be taken so the longitudinal axis of the specimen is parallel to the direction of rolling.
  - 9.2.2 Acceptance or rejection based upon mechanical properties shall depend only on tensile strength.
  - 9.3 Rockwell Hardness <u>Requirement</u>
- 9.3.1 The approximate Rockwell hardness values given in Table 2-or, Table 3, Table 5, Table 5, Table 6 and Table 6, or Table 7 are for general information and assistance in testing and shall not be used as a basis for product rejection.

Note 1—The Rockwell hardness test offers a quick and convenient method of checking for general conformity to the specification requirements for temper, tensile strength and grain size.

# 10. Dimensions-Dimensions, Mass, and Permissible Variations Variation

10.1 The dimensions and tolerances for product described by this specification shall be as specified in Specification B248 or B248M with particular reference to the following related paragraphs in that specification.paragraphs:

10.1.1 Thickness.

10.1.2 Width:

10.1.2.1 Slit Metal and Slit Metal With Rolled Edges.

TABLE 2 Tensile Strength (inch-pound units) Requirements and Approximate Rockwell Hardness Values for Rolled Temper (H) Product

Note 1—Plate is generally available in only the as hot-rolled (M20) temper. Required properties for other tempers shall be agreed upon between the manufacturer and the purchaser at the time of placing the order.

<sup>&</sup>lt;sup>A</sup> Rockwell hardness values apply as follows: the B scale values apply to metal 0.020 in. and over in thickness, and the 30-T scale values apply to metal 0.012 in. and over in thickness

- 10.1.2.2 Squared-Sheared Metal.
- 10.1.2.3 Sawed Metal.
- 10.1.3 Length:
- 10.1.3.1 Specific and Stock Lengths With and Without Ends.
- 10.1.3.2 Schedule of Lengths (Specific and Stock) With Ends.
- 10.1.3.3 Length Tolerances for Square-Sheared Metal.
- 10.1.3.4 Length Tolerances for Sawed Metal.
- 10.1.4 Straightness:
- 10.1.4.1 Slit Metal or Slit Metal Either Straightened or Edge-Rolled.
- 10.1.4.2 Squared-sheared Metal.
- 10.1.4.3 *Sawed metal*.
- 10.1.5 *Edges*:
- 10.1.5.1 Square Edges.
- 10.1.5.2 Rounded Corners.
- 10.1.5.3 Rounded Edges.
- 10.1.5.4 Full-Rounded Edges.

#### ASTM B36/B36M-13

- 10.2 Thickness: rds. iteh.ai/catalog/standards/sist/ca34fc2f-0aaf-4943-ab88-e2e4f014b39a/astm-b36-b36m-13
- 10.3 *Width:*
- 10.3.1 Slit Metal and Slit Metal With Rolled Edges.
- 10.3.2 Squared Sheared Metal.
- 10.3.3 Sawed Metal.
- 10.4 Length:
- 10.4.1 Length Tolerance for Straight Lengths.
- 10.4.2 Schedule for Minimum Lengths and Maximum Weights of Ends for Specific Lengths with Ends, and Stock Lengths with Ends.
  - 10.4.3 Length Tolerance for Square Sheared Metal.
  - 10.4.4 Length Tolerance for Sawed Metal.
  - 10.5 Straightness:
  - 10.5.1 Slit Metal or Slit Metal Either Straightened or Edge Rolled.
  - 10.5.2 Square Sheared Metal.
  - 10.5.3 Sawed Metal.
  - 10.6 Edges Contours:
  - 10.6.1 Square Corners.
  - 10.6.2 Rounded Corners.
  - 10.6.3 Rounded Edges.
  - 10.6.4 Full-Rounded Edges.

## 11. Test Methods

11.1 Chemical Analysis: Analyses:

# TABLE 3 Tensile Strength (SI units) Requirements and Approximate Rockwell Hardness Values for Rolled Temper (H) Product

Note 1—Plate is generally available in only the as hot-rolled (M20) temper. Required properties for other tempers shall be agreed upon between the manufacturer and the purchaser at the time of placing the order.

|          | Rolled Temper             | Tensile Str     | ength, MPa <sup>A</sup> |                 |                     |          | ximate Roo        | ckwell Ha        |                     |          |        |
