

Designation: D4720 – 08 (Reapproved 2013)

Standard Performance Specification for Soft Window Covering Fabrics for Household Use¹

This standard is issued under the fixed designation D4720; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification covers the evaluation of specific performance characteristics of any washable or drycleanable soft window covering.

1.2 This specification is not a specification for washable or drycleanable soft window coverings but may be used by mutual agreement between the purchaser and the supplier to establish material specifications.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

2. Referenced Documents

3. Terminology

3.1 *Definitions:*

3.1.1 *soft window coverings, n*—curtains, draperies, or other accessories on wall or window openings that are either lined or unlined and primarily constructed of textile fabrics.

3.1.1.1 *Discussion*—Washable soft window coverings include those that can be refurbished by any procedure in which the cleaning solvent is water. Drycleanable soft window coverings include those that should be refurbished by any procedure in which the cleaning solvent is primarily nonaqueous and used in drycleaning.

3.2 For definitions of textile terms used in this specification refer to Terminology [D123](#) and Terminology [D3136](#).

4. Significance and Use

4.1 This specification may be used to evaluate pertinent performance characteristics of washable and drycleanable soft window coverings, whether lined or unlined.

4.1.1 Soft window covering characteristics to be evaluated prior to repeated refurbishing include, but are not limited to, seam strength and appearance, uniformity of shade (part to part), and size consistency (side to side and part to part).

4.1.2 Soft window covering characteristics to be evaluated after repeated refurbishing include, but are not limited to, colorfastness, dimensional change, seam strength, appearance, and compatibility of components. Compatibility of dimensional change between drapery fabric and lining should be noted.

4.2 The specified home laundry machine settings do not reflect advances in cycle design or special features of washer and dryers which enhance the performance of these products. The standard washing and drying procedure reflects the minimum capabilities of current home laundering equipment used by consumers in accordance with care label instructions.

4.2.1 The reproducibility of the results of the test method specified in [9.2](#) depends on the use of procedures for automatic home laundering as specified on care labels.

¹ This specification is under the jurisdiction of ASTM Committee [D13](#) on Textiles and is the direct responsibility of Subcommittee [D13.63](#) on Home Furnishings.

Current edition approved Oct. 1, 2013. Published October 2013. Originally approved in 1987. Last previous edition approved in 2008 as D4720–08. DOI: 10.1520/D4720-08R13.
