Foreword.....	iv
Part 23: Determination of elastic modulus for glazed and unglazed ceramic tiles, substrate and glaze layer.....	1
1 — Scope.....	1
2 — Normative references.....	1
3 — Terms and definitions.....	1
4 — Principle.....	2
5 — Apparatus.....	2
5.1 — Testing machine.....	2
5.2 — Data acquisition.....	2
5.3 — Dimensional measuring devices.....	2
6 — Test specimens.....	2
6.1 — Test specimen size.....	2
6.2 — Test specimen preparation.....	3
6.2.1 — Test specimen machining.....	3
6.2.2 — Test specimen handling and storage.....	3
6.2.3 — Number of test specimens.....	3
7 — Test procedure.....	3
7.1 — Testing machine and loading speed.....	3
7.2 — Elastic modulus measurement.....	4
7.3 — Measurement for the thickness of glaze layer.....	5
7.4 — Temperature and relative humidity.....	5
8 — Calculation of elastic modulus.....	5
8.1 — Calculation of elastic modulus of test specimens.....	5
8.2 — Calculation of elastic modulus of the glaze layers.....	6
8.3 — Mean value and standard deviation.....	6
9 — Analysis of precision and uncertainty.....	7
10 — Test report.....	7
Annex A (informative) Application of elastic modulus of ceramic tiles.....	8
Annex B (informative) Preparation of test specimens for elastic modulus tests.....	10

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 189, *Ceramic tile*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
