

FINAL DRAFT

Technical Specification

ISO/IEC DTS 20000-16

Information technology — Service management —

Part 16: Guidance on sustainability within a service management system based on ISO/IEC 20000-1

Technologies de l'information — Gestion des services —

*Partie 16: Recommandations pour un système de management
des services durable basé sur l'ISO/IEC 20000-1*

ISO/IEC JTC 1/SC 40

Secretariat: **SA**

Voting begins on:
2024-09-03

Voting terminates on:
2024-10-29

RECIPIENTS OF THIS DRAFT ARE INVITED TO SUBMIT, WITH THEIR COMMENTS, NOTIFICATION OF ANY RELEVANT PATENT RIGHTS OF WHICH THEY ARE AWARE AND TO PROVIDE SUPPORTING DOCUMENTATION.

IN ADDITION TO THEIR EVALUATION AS BEING ACCEPTABLE FOR INDUSTRIAL, TECHNOLOGICAL, COMMERCIAL AND USER PURPOSES, DRAFT INTERNATIONAL STANDARDS MAY ON OCCASION HAVE TO BE CONSIDERED IN THE LIGHT OF THEIR POTENTIAL TO BECOME STANDARDS TO WHICH REFERENCE MAY BE MADE IN NATIONAL REGULATIONS.

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives or www.iec.ch/members_experts/refdocs).

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information Technology*, SC 40, *IT Service Management and IT Governance*.

A list of all parts in the ISO/IEC 20000 series can be found on the ISO and IEC websites.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

Introduction

Climate change and the decline of biodiversity in the last few decades have highlighted the effect of human actions on the planet and life. Recognizing this impact, the United Nations (UN) has called for a global partnership for sustainable development to improve human life and protect the environment. The UN 2030 Agenda for Sustainable Development, which is adopted by all member states, provides a shared blueprint for peace and prosperity for people and the planet, now and into the future. This agenda includes 17 Sustainable Development Goals (SDGs). Sustainable development is defined as development that meets the needs of the present without compromising the ability of future generations to meet their own needs. Sustainability has three interdependent dimensions, which are:

- environmental;
- social; and
- economic.

Many national and international standards, guidelines and documents have been published on how to better address environmental, social and economic world issues. In response to the ISO initiative (the London Declaration^[22]), ISO/IEC 20000-1 is an example where sustainability can be built into the existing structure. Information technology (IT) has a critical role to play in the operations of services within any organization and has great potential to drive sustainable development.

This document provides guidance for sustainability within a service management system (SMS). Sustainability actions can span across diverse areas, including eco-responsibility, eco-labelling of products and services, moving to net zero greenhouse gas (GHG) emissions (i.e. negating the amount of greenhouse gases produced by human activity), social responsibility, circular economy, long-term viability and organization culture change to deal with the present and prepare for the future. As sustainability is applied to an SMS, this guidance will focus on the three sustainability dimensions and not the specific actions to support sustainable operations (e.g. eco-responsibility, GHG). An SMS aligned to the sustainability strategy of the organization extends the focus from service resilience to sustainable service delivery and operations.

Organizations, through strategic planning and top management commitment, can directly minimize the environmental, social and economic impact of service delivery. This strategy is reflected in the service management objectives, service management plan and ongoing activities/operations needed for service delivery.

An SMS focused on sustainability will provide opportunities for ongoing visibility, control of services and continual improvement, leading to greater effectiveness, efficiency and reduction of the impact on global resources. These benefits can arise from optimized IT asset utilization, responsible procurement, sustainable supplier management, improving data centre facilities, and operations management in terms of electricity, water, HVAC (Heating, Ventilation, Air Conditioning), hardware components, etc.

ISO/IEC 20000-1 has been written generically, which means that the type, size or nature of the services delivered makes no difference when applying the requirements. This document, following the structure of ISO/IEC 20000-1, focuses on which areas to consider for improving sustainability within an SMS. It does not state any performance criteria across the dimensions of sustainability. The complexity of an SMS focused on sustainability will depend solely on the context of the organization, the scope of operation, compliance obligations, and the nature of the organizational activities, products and services.

[Figure 1](#) illustrates an SMS showing the clause content of ISO/IEC 20000-1. Numbers in parentheses in [Figure 1](#) indicate ISO/IEC 20000-1 clause numbers.

Part 16:

Guidance on sustainability within a service management system based on ISO/IEC 20000-1

1 Scope

1.1 General

This document provides guidance for including sustainability within a service management system (SMS) based on the requirements defined in ISO/IEC 20000-1. It is aimed at:

- organizations that are intending to implement the requirements of ISO/IEC 20000-1 and directly address sustainability;
- organizations that intend to leverage their existing SMS to enable sustainability actions and sustainable delivery;
- consultants, trainers and other experts supporting organizations that utilize ISO/IEC 20000-1, so that they can be informed on how to include sustainability actions in an SMS.

Sustainability in this context has three interdependent dimensions which are environmental, social and economic. [Annex A](#) expands on the three dimensions with examples of each.

This guidance aims to help organizations consider and address sustainability objectives as well as challenges related to their services. The complexity and detail surrounding the inclusion of sustainability within an SMS will vary and be dependent on the context of the organization, the scope of the SMS, compliance obligations and the nature of the services within the scope of the SMS.

1.2 Application

This document is intended to be used in conjunction with ISO/IEC 20000-1 to address sustainability objectives related to specific requirements in ISO/IEC 20000-1. As such, it is anticipated that the user of this document is aware of the requirements in ISO/IEC 20000-1. The suggestions included across clauses in this document will be most effective when applied to an SMS which is implemented according to the corresponding clauses in ISO/IEC 20000-1. Application of this guidance to an SMS according to ISO/IEC 20000-1 is therefore recommended.

This document supports and is an addition to the guidance already provided in ISO/IEC 20000-2, ISO/IEC 20000-3, ISO/IEC TS 20000-5 and other parts of the ISO/IEC 20000 series.

Organizations can use the guidance in this document to also address the new requirements identified in ISO/IEC 20000-1:2018/Amd 1:2024 and ISO's objectives to address climate change.

The recommendations in this document for improving sustainability within an SMS are not exclusive and can be implemented along with other sustainability initiatives.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 20000-1, *Information technology — Service management — Part 1: Service management system requirements*

ISO/IEC 20000-10, *Information technology — Service management — Part 10: Concepts and vocabulary*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 20000-1, ISO/IEC 20000-10 and the following apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

3.1 adaptation

adjustments in ecological, social or economic systems in response to actual or expected climatic stimuli and their effects or impacts

Note 1 to entry: Adaptation refers to changes in processes, practices and structures to moderate potential damages or to benefit from opportunities associated with climate change.

[SOURCE: ISO/IWA 42:2022, 3.1.5]

3.2 bribery

offering, promising, giving, accepting or soliciting of an undue advantage of any value (which could be financial or non-financial), directly, or indirectly, and irrespective of location(s), in violation of applicable law, as an inducement or reward for a person acting or refraining from acting in relation to the performance of that person's duties

Note 1 to entry: The above is a generic definition. The meaning of the term "bribery" is as defined by the anti-bribery law applicable to the organization and by the anti-bribery management system designed by the organization.

[SOURCE: ISO 37001:2016, 3.1]

3.3 climate

statistical description of weather in terms of the mean and variability of relevant quantities over a period of time ranging from months to thousands or millions of years

Note 1 to entry: The classical period for averaging these variables is 30 years, as defined by the World Meteorological Organization.

Note 2 to entry: The relevant quantities are most often near-surface variables such as temperature, precipitation and wind.

[SOURCE: ISO Guide 84:2020, 3.1.1]

3.4 climate change

change in climate that persists for an extended period, typically decades or longer

Note 1 to entry: Change in climate can be identified (e.g. by using statistical tests) by changes in the mean and/or the variability of its properties.

Note 2 to entry: Climate change might be due to natural processes, internal to the climate system, or external forcings such as modulations of the solar cycles, volcanic eruptions, and persistent anthropogenic changes in the composition of the atmosphere or in land use.

[SOURCE: ISO Guide 84:2020, 3.1.2]

3.5 **circular economy**

economic system that systemically maintains a circular flow of resources, by regenerating, retaining or adding to their value while contributing to sustainable development

[SOURCE: ISO 5020:2022, 3.3.1]

3.6 **eco-design**

methodical approach that takes into consideration the environmental aspects of the design and development process with the aim of reducing the negative environmental impacts throughout the lifecycle of a product

[SOURCE: IEC 62430:2019]

3.7 **eco-responsibility**

attitude, behaviour and activity of a person or an organization to make informed environmental, social and financial choices to position the protection of the planet first

3.8 **environmental impact**

change to the environment whether adverse or beneficial, wholly or partially resulting from an organization's environmental aspects

[SOURCE: ISO 14001:2015, 3.2.4]

3.9 **ecolabel** **environmental label**

claim which indicates the environmental aspects of goods or services

Note 1 to entry: An environmental label or declaration may take the form of a statement, symbol or graphic on a product or package label, in product literature, in technical bulletins, in advertising or in publicity, amongst other things.

Note 2 to entry: Ecolabels^[23] are an international method of showing compliance to various sustainability frameworks.

[SOURCE: ISO 20400:2017, 3.4, modified — Note 2 to entry has been added; the preferred term "environmental label" has been changed to an admitted term and "ecolabel" has been added as the preferred term.]

3.10 **greenhouse gas** **GHG**

gaseous constituent of the atmosphere, natural or anthropogenic, that absorbs and emits radiation at specific wavelengths within the spectrum of infrared radiation emitted by the Earth's surface, the atmosphere and clouds

Note 1 to entry: Greenhouse gases caused by human activities and relevant for this document include carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulfur hexafluoride (SF₆) and nitrogen trifluoride (NF₃).
