ASTM-F552

ADOPTION NOTICE

ASTM-F552, "CHAIN LINK FENCING", was adopted on 25-OCT-89 for use by the Department of Defense (DoD). Proposed changes by DoD activities must be submitted to the DoD Adopting Activity: Commander, Defense Supply Center Philadelphia, ATTN: DSCP-ILEA, 700 Robbins Avenue, Philadelphia, PA 19111-5096. Copies of this document may be purchased from the American Society for Testing and Materials 100 Barr Harbor Drive West Conshohocken, Pennsylvania, United States, 19428-2959. http://www.astm.org/

<u>DISTRIBUTION STATEMENT A</u>: Approved for public release; distribution is unlimited.

Standard Terminology Relating to Chain Link Fencing¹

This standard is issued under the fixed designation F 552; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

aluminized—*in chain link fabric*, describes fabric woven from steel wire that is coated with aluminum before weaving (see Specification A 491²).

barb—as related to barbed wire- a short length of wire, with exposed ends cut on a bias to produce sharp points. See Specifications F 1665 and A 121.

barbed tape—strip of metal, machined to produce clusters of sharp points (see Terminology F 1379² for further information)

barbed wire—a fabricated wire product consisting of two line wires twisted to form a two-wire strand, into which 2–point or 4–point barbs are tightly wrapped and locked into place at specific intervals. (*Syn.* barbwire). See Specifications F 1665 and A 121.

barbed wire arm—a post fitting used to hold barbed wire in place. May be vertical or angled to hold three or more strands of barbed wire, or "V" shaped to hold six or more strands of barbed wire.

barbed wire arm base—a casting of aluminum, malleable iron, or steel, used in combination with one or two barbed wire extension arms held in place by a bolt and nut.

barbed wire extension arm—pressed aluminum or pressed galvanized steel used in combination with barbed wire arm base to hold three strands of barbed wire either vertically or angled in or out from the fence line. Also used in pairs in a "V" configuration to hold 6 strands of barbed wire.

bottom rail—horizontal member of the framework running continuously along the bottom edge of the fence.

boulevard clamp—a two piece clamp with carriage bolts and nuts designed for 180° horizontal rail connections to a line post (also called *line rail clamp*).

brace band—a symmetrically formed strip of metal shaped to fit around a post and used with a carriage bolt and nut to attach the rail end or brace rail end truss rod tightener to the post (see Fig. 1). Also used for attaching barbed wire, tension wire, and other items to a terminal post.

brace rail—a compression member at terminal posts or corner posts.

FIG. 1 Brace Band

brace rail end—a cup-shaped fitting similar to a rail end with provision for attaching a truss rod.

cantilever slide gate—any horizontal slide gate spanning an opening lacking a top or bottom support within that opening (see Specification F 1184²).

center stop—a device to receive and hold the drop bar on a double gate.

corner barbed wire arm—a combination post cap and fitting used to hold barbed wire in place on a corner post. May be angled in or out from the fence line to hold three or more strands of barbed wire, or "V" shaped to hold six or more strands of barbed wire.

corner post—a terminal post, at which the direction of the line of fence changes in two or more directions (see Fig. 2).

corner rail clamp—a two-piece clamp with carriage bolts and nuts designed for horizontal rail connections to a 90° corner post.

diamond—the opening formed by the woven wires in chain link fence fabric.

diamond count—the number of diamond openings from one edge of fabric to the other. The count of a given fabric shall begin at the first completed diamond at one edge and continue to the unfinished (half) or full opening at the other edge (see Fig. 3).

drop bar—component of a double gate latch assembly (sometimes called *drop rod*) (see Specification F 900²).

end post—the terminal post at the end of a line of fence (see Fig. 4).

end rail clamp—a two-piece clamp with carriage bolt and nut designed for horizontal rail connections to an end post.

fabric (**chain link fence**)—a fencing material made from wire helically wound and interwoven in such a manner as to provide a continuous mesh without knots or ties except in the form of knuckling or of twisting the ends of the wires to form the selvages of the fabric (see Fig. 5).

flange—in chain link fencing, a plate or casting for securing a post to a floor or a horizontal rail to a wall.

¹ This terminology is under the jurisdiction of ASTM Committee F14 on Fences and is the direct responsibility of Subcommittee F14.40 on Chain Link Fence and Wire Accessories.

Current edition approved August 10, 2001. Published October 2001. Originally published as F552-78. Last previous edition F552-94.
