FINAL DRAFT
International Standard

ISO/FDIS 10050

Lubricants, industrial oils and related products (class L) — Family T (Turbines) — Specifications of triaryl phosphate ester turbine control fluids (category ISO-L-TCD)

Lubrifiants, huiles industrielles et produits connexes (classe L) — Famille T (Turbines) — Spécifications pour les fluides de régulation de turbines à base d'esters de triaryl phosphate (catégorie ISO-L-TCD)

ISO/TC **28**/SC **4**

Secretariat: **AFNOR**

Voting begins on:
2024-04-29

Voting terminates on:
2024-06-24

RECIPIENTS OF THIS DRAFT ARE INVITED TO SUBMIT, WITH THEIR COMMENTS, NOTIFICATION OF ANY RELEVANT PATENT RIGHTS OF WHICH THEY ARE AWARE AND TO PROVIDE SUPPORTING DOCUMENTATION.

IN ADDITION TO THEIR EVALUATION AS BEING ACCEPTABLE FOR INDUSTRIAL, TECHNOLOGICAL, COMMERCIAL AND USER PURPOSES, DRAFT INTERNATIONAL STANDARDS MAY ON OCCASION HAVE TO BE CONSIDERED IN THE LIGHT OF THEIR POTENTIAL TO BECOME STANDARDS TO WHICH REFERENCE MAY BE MADE IN NATIONAL REGULATIONS.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 28, *Petroleum and related products, fuels and lubricants from natural or synthetic sources*, Subcommittee SC 4, *Classifications and specifications*.

This second edition cancels and replaces the first edition (ISO 10050:2005), which has been technically revised.

The main changes are as follows:

ISO/FDIS 10050
https://standards.iteh.ai/catalog/standards/iso/edb2418b-967a-49e7-b668-0afb868dc7f1/iso-fdis-10050

— addition of precisions about the composition of the products;

— addition of safety precautions;

— updates of the specifications:

  — the temperature for elastomer compatibility has been lowered to 60 °C to reflect the conditions of use;

  — the corrosiveness to copper test has been added;

— the maintenance and use guide IEC 60978 has been replaced by ISO 11365.

Any feedback or questions on this document should be directed to the user’s national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Lubricants, industrial oils and related products (class L) — Family T (Turbines) — Specifications of triaryl phosphate ester turbine control fluids (category ISO-L-TCD)

WARNING — The handling and use of products as specified in this document can be hazardous, if suitable precautions are not observed. This document does not purport to address all the safety problems associated with its use. It is the responsibility of the users of this document to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

1 Scope

This document specifies the characteristics of unused triaryl phosphate ester fluids for turbine governor controls and other hydraulic systems in electrical power stations. Fluids used in this application are classified under category TCD of ISO 6743-5.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

No terms and definitions are listed in this document.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

— ISO Online browsing platform: available at https://www.iso.org/obp

— IEC Electropedia: available at https://www.electropedia.org/

4 Composition

4.1 In general, phosphate esters are a class of organophosphorus compounds with the following chemical structure:

$$O = P\ (OR)_3$$

where R is an alkyl, aryl or aryl substituted group. In control systems applications, only triaryl phosphate fluids are used. R, in that case, is a substituted or an unsubstituted phenyl group.

4.2 When approved for use as governor fluids, substituents on the aromatic group are currently either methyl (- CH_3) or tertiary butyl (- $C(CH_3)_3$) groups.

4.3 If the substituents are methyl groups, the product is known as trixylyl phosphate (TXP). This material is a substance of very high concern (SVHC) and its use is subject to authorization as it is included in Annex XIV of the regulation for registration, evaluation, authorization and restriction of chemicals (REACH).[9] Outside the European Union, the fluid is widely used.

4.4 Additives can be incorporated to enhance oxidation stability, corrosion and rust protection, and to reduce foaming. Use of viscosity modifiers is not allowed.
