Secretariat: ASI

Voting begins on: 2024-12-24

Voting terminates on: 2025-02-18

RECIPIENTS OF THIS DRAFT ARE INVITED TO SUBMIT, WITH THEIR COMMENTS, NOTIFICATION OF ANY RELEVANT PATENT RIGHTS OF WHICH THEY ARE AWARE AND TO PROVIDE SUPPORTING DOCUMENTATION.

IN ADDITION TO THEIR EVALUATION AS BEING ACCEPTABLE FOR INDUSTRIAL, TECHNO-LOGICAL, COMMERCIAL AND USER PURPOSES, DRAFT INTERNATIONAL STANDARDS MAY ON OCCASION HAVE TO BE CONSIDERED IN THE LIGHT OF THEIR POTENTIAL TO BECOME STANDARDS TO WHICH REFERENCE MAY BE MADE IN NATIONAL REGULATIONS.

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see <a href="https://www.iso.org/directives">www.iso.org/directives</a>).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <a href="https://www.iso.org/patents">www.iso.org/patents</a>. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see <a href="https://www.iso.org/iso/foreword.html">www.iso.org/iso/foreword.html</a>.

This document was prepared by Technical Committee ISO/TC 83, *Sports and other recreational facilities and equipment*, Subcommittee SC 4 *Snowsports equipment*.

This third edition cancels and replaces the second edition (ISO 6289:2003), which has been technically revised. It also incorporates the Technical Corrigendum ISO 6289:2003/Cor 1:2005.

The main changes are as follows:

— many terms and definitions have been amended, deleted or added.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at <a href="https://www.iso.org/members.html">www.iso.org/members.html</a>.

## Skis — Vocabulary

## 1 Scope

This document defines terms for the specification of important characteristics of alpine skis, cross-country skis (XC-skis) and snowboards.

#### 2 Normative references

There are no normative references in this document.

## 3 Terms and definitions

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <a href="https://www.iso.org/obp">https://www.iso.org/obp</a>
- IEC Electropedia: available at <a href="https://www.electropedia.org/">https://www.electropedia.org/</a>

## 3.1 Terms related to ski

## ski Heli Stanuarus

## 3.1.1

ski

sliding skid of narrow width in relation to its length, with the front end turned up in a radius to ride over obstacles, used as a sporting and recreational device for sliding on snow, ice and artificial snow, but also serving other purposes

Note 1 to entry: The term "ski" does not include use under other conditions, for example sliding on plastic mats, unless this is clearly stated by the manufacturer. In this document, the term "ski" is used to refer to the different types of snow skis.

Note 2 to entry: In the English language, the term "snow ski" is sometimes used in alpine and Nordic skiing. A similar term does not exist in German and French.

## 3.2 Terms related to alpine skiing

#### 3.2.1

#### alpine ski

snow ski (3.1.1) used for sliding down slopes as a result of gravitational force

Note 1 to entry: The control of direction and speed is accomplished through combined motion in the longitudinal and lateral directions of the ski. In order to transmit the steering forces, the edges of the *running surface* (4.1.1) are generally equipped with hard and wear-resistant materials.

#### 3.2.2

mountaineering ski alpine touring ski

randonnee ski

alpine ski (3.2.1) designed for the ascent and descent of mountains

Note 1 to entry: Usually, mountaineering skis include so-called touring bindings which allow heel lift in the ascent phase. Normally, the ski is light, short and wide.

#### 3.2.3

snowfield slider

figl

skiboard

## firnglider

ski (3.1.1) used for sliding down snowfields

Note 1 to entry: Generally, the length of a snowfield slider does not exceed twice the length of the boot.

#### 3.2.4

#### downhill ski

*alpine ski* (3.2.1) intended for downhill competitions in which high speeds are attained according to the downhill racing rules or with similar specifications for non-competitive use

#### 3.2.5

#### slalom ski

*alpine ski* (3.2.1) intended for slalom competitions according to the slalom racing rules or with similar specifications for non-competitive use

### 3.2.6

## giant-slalom ski

*alpine ski* (3.2.1) intended for giant-slalom competitions according to the giant-slalom racing rules or with similar specifications for non-competitive use

#### 3.2.7

## freestyle ski

park and pipe ski

twintip ski

## terrain park ski

*alpine ski* (3.2.1) intended to be used in freestyle competitions according to the freestyle rules or with similar specifications for non-competitive use

## 3.2.8

#### junior ski

ski (3.1.1) intended to be used by persons of 9 years to 15 years of age

## **3.2.9**ps://standards.iteh.ai/catalog/standards/iso/0735e5d0-5187-494f-9e18-4b9ce4fb4421/iso-fdis-6289

## children's ski

ski (3.1.1) intended to be used by persons of 9 years of age and younger

#### 3.2.10

### speed ski

*alpine ski* (3.2.1) intended for speed competitions according to the speed racing rules or with similar specifications for non-competitive use

## 3.2.11

## super-G ski

*alpine ski* (3.2.1) intended for super-G competitions according to the super-G racing rules or with similar specifications for non-competitive use

#### 3.2.12

#### rocker

alpine ski (3.2.1) with a negative curve and with extended shovel length and/or tail turn-up length

Note 1 to entry: Rocker is a design feature.

## 3.2.13

#### freeride ski

ski (3.1.1) that is specially designed for non-groomed slopes

#### 3.2.14

## powder ski

ski (3.1.1) specially designed for powder snow

## 3.3 Terms related cross-country skiing

#### 3.3.1

#### cross-country ski

#### XC-ski

## nordic ski

snow *ski* (3.1.1) designed for skiing over flat and hilly terrain

#### 3.3.2

## cross-country racing ski

*cross-country ski* (3.3.1) designed for use in cross-country competitions

Note 1 to entry: Design emphasis is placed on light weight in addition to gliding ease in well-prepared tracks.

#### 3.3.3

## back-country touring ski

ski (3.1.1) intended to be used in back country as well as in touring areas

#### 3.3.4

#### cross-country adult's ski

ski (3.1.1) intended to be used by adult persons who are 16 years of age and older

#### 3.3.5

## cross-country junior ski

ski (3.1.1), usually of the same construction as an adult's ski but shorter, intended for juniors of 10 years to 15 years of age

#### 3.3.6

#### cross-country children's ski

*ski* (3.1.1), usually of a special construction, intended to be used by children who walk rather than glide on the snow and are 9 years of age and younger ISO/FDIS 6280

#### 3.4 Terms related to snowboarding

## 3.4.1

## snowboard

single-plane device ridden with a sideways stance with the feet angled to the longitudinal axis of the device

## 3.4.2

## alpine snowboard

snowboard (3.4.1) designed for the practice of alpine type of riding, especially competition oriented

#### 3.4.3

#### free-ride snowboard

snowboard (3.4.1) for the purpose of riding the mountains on natural terrain with different snow conditions

#### 3.4.4

## free-style snowboard

snowboard (3.4.1) for the purpose of doing tricks and manoeuvres adopted directly from skateboarding

#### 3.4.5

#### goofy

stance on the *snowboard* (3.4.1) with the right foot forward

#### 3.4.6

## regular

stance on the *snowboard* (3.4.1) with the left foot forward

#### 3.4.7

## split board

*snowboard* (3.4.1) divisible in two or more parts for the purpose of ascent and reassembled for descent

## 3.5 Terms related to specific skis

## 3.5.1

## monoski

single-plane sliding *ski* (3.1.1) ridden with the feet parallel to the longitudinal axis of the *ski* 

#### 3.5.2

## telemark skiing

type of alpine skiing technique where the heel of the boot is not fixed during downhill skiing

## 4 Terms related to design features

## 4.1 Terms related to functional ski elements

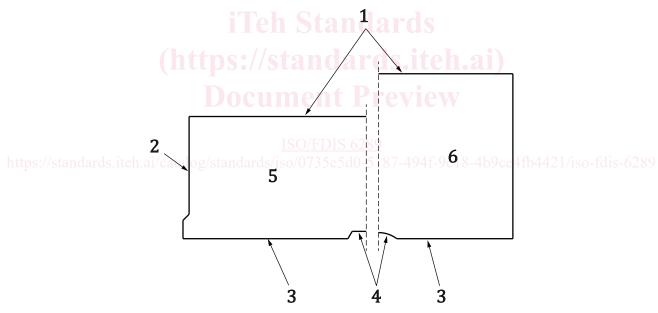

#### 4.1.1

## bottom surface

## running surface

underside of the ski (3.1.1) which interfaces the snow when skiing

Note 1 to entry: See Figure 1.

#### Key

- 1 top surface (4.1.2)
- 2 side surface (4.1.3)
- 3 bottom surface
- 4 bottom groove (4.1.4)
- 5 alpine ski (3.2.1)
- 6 cross-country ski (3.3.1)

Figure 1 — Functional ski elements

#### 4.1.2

## top surface

side of the *ski* (3.1.1) opposite to the *bottom surface* (4.1.1)

Note 1 to entry: See Figure 1.

#### 4.1.3

#### side surface

surface which borders the sides of the ski (3.1.1)

Note 1 to entry: See Figure 1.

#### 4.1.4

#### bottom groove

concave recess running longitudinally along the bottom surface (4.1.1) of the ski (3.1.1)

Note 1 to entry: See Figure 1.

#### 4.1.5

## bottom-surface edge

intersection of bottom surface (4.1.1) and side surface (4.1.3)

## 4.2 Terms related to ski sections

## 4.2.1

#### ski tip

extreme forward point of the ski (3.1.1)

## 4.2.2

## ski tail

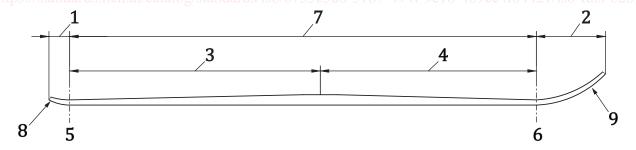

extreme rear-edge point of the ski (3.1.1)

#### 4.2.3

## ski shovel

forward section of the *ski* (3.1.1), which is turned up in order to ride easily over obstacles

Note 1 to entry: See Figure 2. Note 1 to entry: See Figure 2.

#### Key

- 1 tail turn-up(4.2.7)
- 2 ski shovel / tip turn up (4.2.8)
- 3 afterbody of ski (4.2.10)
- 4 forebody of ski (4.2.9)
- 5 rear contact line (4.2.5)

- 6 forward contact line (4.2.4)
- 7 body of ski (4.2.6)
- 8 ski tail (<u>4.2.2</u>)
- 9 *ski tip* (4.2.1)

Figure 2 — Ski sections

#### 4.2.4

## forward contact line

forwardmost contact line between the *bottom surface* ( $\underline{4.1.1}$ ) of the *ski* ( $\underline{3.1.1}$ ) and a flat surface against which the *ski* body is pressed

Note 1 to entry: See Figure 2.

#### 4.2.5

#### rear contact line

rearmost contact line between the *bottom surface* ( $\underline{4.1.1}$ ) of the *ski* ( $\underline{3.1.1}$ ) and a flat surface against which the ski body is pressed

Note 1 to entry: See Figure 2.

#### 4.2.6

## body of ski

part of the ski (3.1.1) between the forward contact line (4.2.4) and the rear contact line (4.2.5)

Note 1 to entry: See Figure 2.

#### 4.2.7

#### tail turn-up

turned-up portion of the *ski* (3.1.1) rearward of the *rear contact line* (4.2.5)

Note 1 to entry: See Figure 2.

## 4.2.8

#### tip turn-up

turned-up portion of the ski (3.1.1) forward of the forward contact line (4.2.4)

#### 4.2.9

#### forebody of ski

front half of the *ski* (3.1.1) body towards the shovel

Note 1 to entry: See Figure 2.

#### 4.2.10

#### **ISO/FDIS 6289**

**afterbody of ski** ls. iteh. ai/catalog/standards/iso/0735e5d0-5187-494f-9e18-4b9ce4fb4421/iso-fdis-6289 rear half of the *ski* (3.1.1) body towards the *tail turn-up* (4.2.7)

Note 1 to entry: See Figure 2.

## 4.2.11

## neutral plane

plane internal to the ski (3.1.1) where no bending stresses occur when the ski is bent perpendicular to its bottom surface (4.1.1)

## 4.3 Terms related to types of construction

#### 4.3.1

## sandwich construction

composite structure in which the ski core (4.4.3) is reinforced above and below with materials of higher strength and higher Young's modulus than the core itself

Note 1 to entry: These reinforcing materials are generally distributed over the entire width and length of the ski. The ski core may be partly hollow and made from a variety of materials, such as wood or polyurethane.

#### 4.3.2

#### box construction

composite structure in which the load-carrying members are built as a combination of webs and flanges arranged in box form following the external shape of the ski cross-section or partly in the interior of the ski

Note 1 to entry: The ski core may be partly hollow and made from a variety of materials, such as wood or poly-urethane.

#### 4.3.3

## wood ski

*ski* (3.1.1) with wood *core* (4.4.3), not having load-carrying layers of higher strength and higher Young's modulus than wood, except the steel edge

#### 4.3.4

#### metal ski

sandwich or box structure where the load-carrying layers are metal, normally aluminium alloy

Note 1 to entry: The core (4.4.3) material may be partly hollow and made from a variety of materials, such as wood or polyurethane.

#### 4.3.5

#### fibreglass ski

sandwich construction (4.3.1) or box construction (4.3.2) where the load-carrying facings (except the steel edges or metal top edges) are made from glass fibre-reinforced plastics

Note 1 to entry: The core (4.4.3) material may be partly hollow and made from a variety of materials, such as wood or polyurethane.

#### 4.3.6

#### carbon or aramid fibre ski

sandwich construction (4.3.1) or box construction (4.3.2) where the load-carrying facings (except the steel edges or metal top edges) are made from carbon fibre-reinforced plastics, aramid fibre or other fibre, usually in combination with glass fibres

Note 1 to entry: The core (4.4.3) may be partly hollow and made from a variety of materials, such as wood or polyurethane.

#### 4.3.7

## **fibre-metal ski**rds.iteh.ai/catalog/standards/iso/0735e5d0-5187-494f-9e18-4b9ce4fb4421/iso-fdis-6289

ski (3.1.1) with load-carrying layers which consist of a combination of fibre-reinforced plastics and metals

Note 1 to entry: The core (4.4.3) may be partly hollow and made from a variety of materials, such as wood or polyurethane.

## 4.3.8

## asymmetrical

ski (3.1.1) or snowboard (3.4.1) which is designed asymmetrically along the longitudinal axis

#### 4.3.9

## twin-tip snowboard

*snowboard* (3.4.1) with turned-up tips

## 4.3.10

## cap construction

form of *sandwich construction* (4.3.1) with a continuous peripheral envelope, forming the *top surface* (4.1.2) and whole or part of the sides

#### 4.3.11

#### shell construction

form of box construction (4.3.2) with a continuous peripheral envelope, the top surface (4.1.2) and whole or part of the sides forming the structure of the ski
