Designation: B 171M – 96

Standard Specification for Copper-Alloy Plate and Sheet for Pressure Vessels, Condensers and Heat Exchangers [Metric]

This standard is issued under the fixed designation B 171M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

This specification establishes the requirements for copper-alloy plate and sheet for pressure vessels, condensers, and heat exchangers. Formerly under the jurisdiction of B05 on Copper and Copper Alloys, this specification was discontinued in 1999 and replaced by Specification B 171/B 171M¹ because these two standards were combined.
