## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted (see [www.iso.org/directives](http://www.iso.org/directives) or [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs)).

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at [www.iso.org/patents](http://www.iso.org/patents) and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html). In the IEC, see [www.iec.ch/understanding-standards](http://www.iec.ch/understanding-standards).

ISO/IEC/IEEE 8802-1Q:2024/Amd 36 was prepared by the LAN/MAN of the IEEE Computer Society (as IEEE 802.1Qcw-2023) and drafted in accordance with its editorial rules. It was adopted, under the "fast-track procedure" defined in the Partner Standards Development Organization cooperation agreement between ISO and IEEE, by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 6, *Telecommunications and information exchange between systems*.

A list of all parts in the ISO/IEC/IEEE 8802 series can be found on the ISO and IEC websites.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html) and [www.iec.ch/national-committees](http://www.iec.ch/national-committees).

IEEE Standard for  
Local and Metropolitan Area Networks—

## Bridges and Bridged Networks

# Amendment 36: YANG Data Models for Scheduled Traffic, Frame Preemption, and Per-Stream Filtering and Policing

(This amendment is based on IEEE Std 802.1Q™-2022 as amended by IEEE Std 802.1Qcz-2023.)

NOTE—The editing instructions contained in this amendment define how to merge the material contained therein into the existing base standard and its amendments to form the comprehensive standard.

The editing instructions are shown in *bold italics*. Four editing instructions are used: change, delete, insert, and replace. *Change* is used to make corrections in existing text or tables. The editing instruction specifies the location of the change and describes what is being changed by using ~~striketrough~~ (to remove old material) and underscore (to add new material). *Delete* removes existing material. *Insert* adds new material without disturbing the existing material. Deletions and insertions may require renumbering. If so, renumbering instructions are given in the editing instruction. *Replace* is used to make changes in figures or equations by removing the existing figure or equation and replacing it with a new one. Editing instructions, change markings, and this note will not be carried over into future editions because the changes will be incorporated into the base standard.<sup>6</sup>

---

<sup>6</sup> Notes in text, tables, and figures are given for information only and do not contain requirements needed to implement the standard.

IEEE Std 802.1Qcw™-2023  
IEEE Standard for Local and Metropolitan Area Networks—Bridges and Bridged Networks  
Amendment 36: YANG Data Models for Scheduled Traffic, Frame Preemption, and Per-Stream Filtering and Policing

## 1. Overview

### 1.3 Introduction

*Insert new list item cs) after item cr) in 1.3 and renumber the subsequent list items accordingly:*

- cs) Define YANG configuration and operational state models (Clause 48) in support of scheduled traffic, frame preemption, and Per-Stream Filtering and Policing.

<https://standards.iteh.ai/catalog/standards/iso/348e72fd-bddd-4574-bdba-843e33badd2e/iso-iec-ieee-8802-1q-2024-amd-36-2025>

## 12. Bridge management

### 12.29 Managed objects for scheduled traffic

#### 12.29.1 The Gate Parameter Table

*Insert two new rows at the end of Table 12-32 as follows (unchanged rows not shown):*

**Table 12-32—The Gate Parameter Table**

Name	Data type	Operations supported <sup>a</sup>	Conformance <sup>b</sup>	References
SupportedCycleMax	RationalNumber (seconds)	R	B, E	8.6.8.4, 12.29.1.3, 12.29.1.6
SupportedIntervalMax	Integer	R	B, E	8.6.8.4, 12.29.1.7

<sup>a</sup> R= Read only access; RW = Read/Write access.

<sup>b</sup> B = Required for Bridge or Bridge component support of enhancements for scheduled traffic; E = Required for end station support of enhancements for scheduled traffic.

#### 12.29.1.2 The gate control list structure and data types

##### 12.29.1.2.1 GateControlEntry

*Change 12.29.1.2.1 as follows:*

A GateControlEntry consists of an operation name, followed by ~~up to~~ 2 parameters associated with the operation, as detailed in Table 8-7. The first parameter, ~~if present~~, is a gateStatesValue (12.29.1.2.2); the second parameter, ~~if present~~, is a timeIntervalValue (12.29.1.2.3).

*Insert 12.29.1.6 and 12.29.1.7 after 12.29.1.5 as follows:*

##### 12.29.1.6 SupportedCycleMax

The maximum value supported by this Port of the AdminCycleTime (8.6.9.4.3) and OperCycleTime (8.6.9.4.19) parameters.

##### 12.29.1.7 SupportedIntervalMax

The maximum value supported by this Port of the timeIntervalValue (12.29.1.2.3) parameter.

**12.31 Managed objects for per-stream classification and metering**

**12.31.1 The Stream Parameter Table**

*Insert two new rows at the end of Table 12-34 as follows (unchanged rows not shown):*

**Table 12-34—The Stream Parameter Table**

Name	Data type	Operations supported <sup>a</sup>	Conformance <sup>b</sup>	References
SupportedCycleMax	RationalNumber (seconds)	R	PSFP, ATS	8.6.5.4, 12.29.1.3, 12.29.1.6
SupportedIntervalMax	Integer	R	PSFP, ATS	8.6.5.4, 12.29.1.7

<sup>a</sup> R= Read only access; RW = Read/Write access.

<sup>b</sup> PSFP = Required for Bridge, Bridge component, or end station support of PSFP.

psfp = Optional for Bridge, Bridge component, or end station support of PSFP.

ATS = Required for Bridge or Bridge component support of ATS.

ats = Optional for Bridge or Bridge component support of ATS.

CI = Required for Bridge or Bridge component support of CI.

*Insert 12.31.1.7 and 12.31.1.8 after 12.31.1.6 as follows:*

**12.31.1.7 SupportedCycleMax**

The maximum value supported by this Port of the AdminCycleTime (8.6.9.4.3) and OperCycleTime (8.6.9.4.19) parameters.

**12.31.1.8 SupportedIntervalMax**

The maximum value supported by this Bridge component of the timeIntervalValue (12.31.3.2.4) parameter.

**12.31.3 The Stream Gate Instance Table**

**12.31.3.2 The gate control list structure and data types**

**12.31.3.2.2 StreamGateControlEntry**

*Change 12.31.3.2.2 as follows:*

A StreamGateControlEntry consists of an operation name, followed by three mandatory parameters and one optional parameter associated with the operation, as detailed in Table 8-4. The first parameter is a StreamGateStatesValue (8.6.10.5, 12.31.3.2.1); the second parameter is an IPV value (8.6.10.7, 12.31.3.2.3); ~~and~~; the third parameter is a timeIntervalValue (8.6.9.4.23, 12.31.3.2.4); and the fourth parameter is an IntervalOctetMaxValue (8.6.10.1, 12.31.3.2.5). IntervalOctetMaxValue is optional.

*Insert 12.31.3.2.5 after 12.31.3.2.4 as follows:*

**12.31.3.2.5 IntervalOctetMaxValue**

An unsigned integer, denoting an IntervalOctetMax in MSDU octets (see IntervalOctetMax in Table 8-4).

**17. Management Information Base (MIB)**

**17.2 Structure of the MIB**

**17.2.22 Structure of the IEEE8021-ST-MIB**

*Insert three new rows at the end of Table 17-28 as follows (unchanged rows not shown):*

**Table 17-28—IEEE8021-ST-MIB structure**

IEEE8021-ST-MIB table/object	Reference
ieee8021STSupportedCycleMaxNumerator	SupportedCycleMax, 12.29.1.6
ieee8021STSupportedCycleMaxDenominator	SupportedCycleMax, 12.29.1.6
ieee8021STSupportedIntervalMax	SupportedIntervalMax, 12.29.1.7

**17.2.24 Structure of the IEEE8021-PSFP-MIB**

*Insert three new rows at the end of Table 17-30 as follows (unchanged rows not shown):*

**Table 17-30—IEEE8021-PSFP-MIB structure**

IEEE8021-PSFP-MIB table/object	Reference
ieee8021PSFPSupportedCycleMaxNumerator	SupportedCycleMax, 12.31.1.7
ieee8021PSFPSupportedCycleMaxDenominator	SupportedCycleMax, 12.31.1.7
ieee8021PSFPSupportedIntervalMax	SupportedIntervalMax, 12.31.1.8

17.7 MIB modules<sup>7 8</sup>

17.7.14 Definitions for the IEEE8021-SRP-MIB module

Change 17.7.14 as follows:

```
IEEE8021-SRP-MIB DEFINITIONS ::= BEGIN

-- =====
