Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principles of risk management	3
4.1 Risk management concept	3
4.2 Risk management process	3
4.3 Risk management implementation into a project	3
4.4 Risk management documentation	3
5 The risk management process	4
5.1 Overview of the risk management process	4
5.2 Risk management steps and tasks	5
5.2.1 Step 1: define risk management implementation requirements	5
5.2.2 Step 2: identify and assess the risks	8
5.2.3 Step 3: decide and act	8
5.2.4 Step 4: monitor, communicate and accept risks	9
6 Risk management implementation	10
6.1 General considerations	10
6.2 Responsibilities	10
6.3 Project life cycle considerations	11
6.4 Risk visibility and decision making	11
6.5 Documentation of risk management	11
7 Risk management requirements	11
7.1 General	11
7.2 Risk management process requirements	12
7.3 Risk management implementation requirements	14
Annex A (informative) Risk register example and ranked risk log example	15
Annex B (informative) Risk management plan	17
Annex C (informative) Example of risks areas in space systems programmes	19
Bibliography	21

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 20, *Aircraft and space vehicles*, Subcommittee SC 14, *Space systems and operations*.

This third edition cancels and replaces the second edition (ISO 17666:2016), which has been technically revised.

The main changes are as follows:

- updated the normative references in [Clause 2](#);
- updated the terms and definitions references in [Clause 3](#) and deleted [Clause 4](#) for abbreviated terms;
- included [Annex C](#) on the risk areas in space systems programmes.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
