

Designation: D5491 – 08 (Reapproved 2014)

Standard Classification for Recycled Post-Consumer Polyethylene Film Sources for Molding and Extrusion Materials¹

This standard is issued under the fixed designation D5491; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope*

1.1 This document provides for the classification of post-consumer polyethylene (PE) film derived from specific sources. It also identifies characteristics useful in determining the acceptability of the film for recycling into molding and extrusion materials. It is neither the intent nor the purpose of this classification to specify the suitability of the recycled material for specific applications.

1.2 This classification provides that the source of the material be listed as an aid in identification. The separation by source also improves the usefulness of the material. Sources are post-consumer PE films from shrink wrap, dry cleaning film, merchandise bags, grocery sacks, stretch wrap, recycle bags, redemption bags, bubble packaging film, and commercial/industrial liners/bags and overwrap. Other post-consumer PE films shall be added to this classification when such material streams are defined.

1.3 It is not the function of this classification to provide data for specific product design or process-performance purposes.

1.4 The supplier shall provide a written certification with each shipment stating that the material is derived from post-consumer PE film sources described within this classification.

1.5 The values stated in SI units are to be regarded as the standard. The values given in parentheses are for information only.

NOTE 1—There is no known ISO equivalent to this standard.

2. Referenced Documents

2.1 *ASTM Standards*:²

[D883 Terminology Relating to Plastics](#)

[D1600 Terminology for Abbreviated Terms Relating to Plastics](#)

[D7209 Guide for Waste Reduction, Resource Recovery, and Use of Recycled Polymeric Materials and Products](#)

3. Terminology

3.1 *Definitions*—The definitions used in this classification are in accordance with Terminology [D883](#) and Guide [D7209](#).

3.2 *Definitions of Terms Specific to This Standard*:

3.2.1 *bubble packaging film, n*—clear or tinted LDPE or LLDPE film with little or no print, used to cushion or to protect surfaces, or both.

3.2.2 *commercial/industrial liners/bag, n*—clear LDPE, LLDPE, or MDPE film with light or no print, used for the shipment of industrial parts, mattresses or textile products, dry nonputrescible foods, nonhazardous chemicals, etc.

3.2.3 *commercial overwrap, n*—clear LDPE, LLDPE, or MDPE film with light or no print, used to cover finished products such as carpeting, furniture, yarn, and other intermediate or retail items during shipment to the distribution outlet or final consumer.

3.2.4 *dry-cleaning film, n*—clear or pigmented film made from LDPE, LLDPE, or their blends, with light or no print, used as the outer protective wrap by dry-cleaning establishments.

3.2.5 *grocery sacks, n*—pigmented or unpigmented blends of polyethylene with or without print, used to carry groceries from a food market.

3.2.6 *merchandise bags, n*—pigmented LDPE, LLDPE, MDPE, HDPE, or a combination of these resin types, with print, used to carry dry goods from a retailer.

3.2.7 *nominal density, n*—the density of the unpigmented polyethylene resin. The nominal density differs from the apparent density of the material due to the addition of fillers or pigments to the resin.

3.2.8 *recycle bags, n*—blue tinted LLDPE or LDPE film with light or no print, used to transport items to a recycling facility.

3.2.9 *redemption bags, n*—clear or tinted LLDPE or LDPE film with little or no print, used to transport beverage bottles

¹ This classification is under the jurisdiction of ASTM Committee D20 on Plastics and is the direct responsibility of Subcommittee D20.15 on Thermoplastic Materials.

Current edition approved Dec. 1, 2014. Published December 2014. Originally approved in 1993. Last previous edition approved in 2008 as D5491 - 08. DOI: 10.1520/D5491-08R14.
