

# StandardSpecification for Welded Stainless Steel Mechanical Tubing<sup>1</sup>

This standard is issued under the fixed designation A554; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\varepsilon$ ) indicates an editorial change since the last revision or reapproval.

## 1. Scope\*

1.1 This specification covers welded austenitic and ferritic stainless steel mechanical tubing intended for use in ornamental, structural, exhaust, and other applications where appearance, mechanical properties, or corrosion resistance is needed. The grades covered are listed in Table 1.

1.2 This specification covers as-welded or cold-reduced mechanical tubing in sizes to 16 in. (406.4 mm) outside dimension, and in wall thicknesses 0.020 in. (0.51 mm) and over.

1.3 Tubes shall be furnished in one of the following shapes as specified by the purchaser: round, square, rectangular, or special.

1.4 Supplementary requirements of an optional nature are provided and when desired shall be so stated in the order.

1.5 The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

#### 3. Terminology

3.1 *Definitions*—For definitions of terms used in this specification, refer to Terminology A941.

#### 4. Ordering Information

4.1 Orders for material under this specification should include the following, as required, to describe the desired material adequately:

4.1.1 Quantity (feet, mass, or number of pieces),

4.1.2 Name of material (welded stainless steel mechanical tubing),

4.1.3 Form (round, square, rectangular, special, see 1.3),

4.1.4 Dimensions:

4.1.4.1 Round-outside diameter and wall thickness for all conditions (Section 9). Alternatively, for cold-reduced condition, outside diameter and inside diameter or inside diameter and wall dimensions may be specified,

4.1.4.2 Square and rectangular outside dimensions and wall thickness (see 10.1),

4.1.4.3 Special (to be specified),

4.1.5 Length (mill lengths, cut lengths, or multiple lengths (see 9.3)),

4.1.6 Grade (Table 1),

- 4.1.8 Inside diameter bead condition (see 7.2),
- 4.1.9 Surface finish (see Section 12),
- 4.1.10 Report of chemical analysis, if required (Section 8),
- 4.1.11 Individual supplementary requirements, if required,
- 4.1.12 End use,
- 4.1.13 Specification designation,

<sup>&</sup>lt;sup>1</sup> This specification is under the jurisdiction of ASTM Committee A01 on Steel, Stainless Steel and Related Alloys and is the direct responsibility of Subcommittee A01.10 on Stainless and Alloy Steel Tubular Products.

Current edition approved Jan. 1, 2015. Published January 2015. Originally approved in 1965. Last previous edition approved in 2014 as A554–14. DOI: 10.1520/A0554-15.

3

4.1.14 Special requirements,

4.1.15 Special marking (Section 15), and

4.1.16 Special packing (Section 16).

### 5. Process

5.1 The steel may be made by any process.

5.2 If a specific type of melting is required by the purchaser, it shall be stated on the purchase order.

5.3 The primary melting may incorporate separate degassing or refining and may be followed by secondary melting, such as electroslag remelting or vacuum-arc remelting. If secondary melting is employed, the heat shall be defined as all of the ingots remelted from a single primary heat.

5.4 Steel may be cast in ingots or may be strand cast. When steel of different grades are sequentially strand cast, identification of the resultant transition material is required. The producer shall remove the transition material by an established procedure that positively separates the grades.

#### 6. Materials and Manufacture

6.1 The tubes shall be made from flat-rolled steel by an automatic welding process without the addition of filler metal.

## 7. Condition

7.1 The tubes shall be furnished in any of the following conditions as specified:

7.1.1 As welded,

7.1.2 Welded and annealed,

7.1.3 Cold reduced,

7.1.4 Cold reduced and annealed.

7.2 The inside diameter bead shall be furnished in any of the following conditions as specified:

7.2.1 Bead not removed,

7.2.2 Bead controlled to 0.005 in. (0.13 mm) or 15 % of the specified wall thickness, whichever is greater, and

7.2.3 Bead removed.

7.3 Square and rectangular welded stainless tubing is supplied as cold worked unless otherwise specified.

## 8. Heat Analysis

8.1 An analysis of each heat of steel shall be made by the steel manufacturer to determine the percentages of the elements specified. If secondary melting processes are employed, the heat analysis shall be obtained from one remelted ingot or the product of one remelted ingot of each primary melt. The chemical composition thus determined, or that determined from a product analysis made by the tubular product manufacturer, shall conform to requirements specified. When requested in the order or contract, a report of this analysis shall be furnished to the purchaser. (See Test Methods, Practices, and Terminology A751.)

#### 9. Permissible Variations in Dimensions-Round Tubing

9.1 For all conditions except tubing with bead removed, Table 2 shall apply.

9.2 For tubing with bead removed, Table 3 shall apply.

9.3 *Lengths*—Tubing is normally furnished in mill lengths 5 ft (1.5 m) and over. Definite cut lengths are furnished when specified, to the length tolerances shown in Table 4. For tubing ordered in multiple lengths, it is common practice to allow a

#### TABLE 2 Diameter, Wall,<sup>A</sup> and Ovality Tolerances (All Conditions Except Tubing with Bead Removed)

Note 1—Ovality is the difference between maximum and minimum outside diameters measured at any one cross section. There is no additional tolerance for ovality on tubes having a specified wall thickness of more than 3 % of the outside diameter.

NOTE 2—For sizes up to and including 5-in. (127.0-mm) outside diameter, an ovality tolerance of twice the tabular outside diameter tolerance spread shown is applied one half plus and one half minus to tubes having a specified wall thickness of 3 % or less of the specified outside diameter. The average of the maximum and minimum outside diameter readings should fall within the outside diameter tolerances as shown in this table.

NOTE 3—For sizes over 5-in. (127.0-mm) to and including 16-in. (406.4-mm) outside diameter, when the specified wall thickness is 3 % or less of the outside diameter, the ovality shall not exceed 1.5 % of the specified outside diameter.
